Contents

1	**Introduction**	1
1.1	Why is this book interesting?	1
1.2	Some examples, and thought tools	4
1.3	Where are we off to?	13
1.4	The wrap	14
2	**Why do populations invade new areas?**	16
2.1	The Fisher–KPP model	18
2.2	Skellam's model	22
2.3	Reaction–diffusion and invasion speed	22
2.4	Lagging, not flagging	23
2.5	Accelerating waves, and long-distance dispersal	24
2.6	The wrap	33
3	**Evolution on invasion fronts**	35
3.1	Spatial sorting on invasion fronts	36
3.2	Natural selection on invasion fronts	43
3.3	Spatial and temporal fitnesses	46
3.4	Spread models incorporating evolution	51
3.5	Spatial selection and enhanced spatial selection	54
3.6	Absolute and relative fitness of dispersal phenotypes	56
3.7	Kin competition	58
3.8	Inbreeding depression	60
3.9	Local adaptation	61
3.10	The wrap	63
4	**Stochasticity and invasion fronts**	65
4.1	Stochastic processes	66
4.2	Stochastic processes in invasive populations	67
4.3	Population size matters	68
4.4	Sampling distributions, and the law of large numbers	70
4.5	Demographic stochasticity	72
4.6	More complex models of demographic stochasticity	78
4.7	Stochastic dispersal	81
4.8	Population size on invasion fronts	83
4.9	Environmental stochasticity	85
4.10	Stochastic invasions	86
4.11	The wrap	91

5 Stochastic evolutionary processes on invasion fronts 93
5.1 Fixation in sector 5! 93
5.2 Serial founder events 94
5.3 Drifting in space 97
5.4 Surfing mutants 100
5.5 Non-neutral mutations 103
5.6 Expansion load and invasion speed 107
5.7 Drift–selection balance, and invasion speed 109
5.8 Evolutionarily stochastic invasion speeds 111
5.9 The wrap 114

6 Pushed and pulled waves 116
6.1 Waves, pulled and pushed 117
6.2 What causes pushed dynamics? 122
6.3 The dynamics of pushed waves 128
6.4 Evolution in pushed waves 132
6.5 The wrap 138

7 Some interesting wrinkles 139
7.1 The geometry of space 139
7.2 The geometry of traits 149
7.3 Anomalous invasion speeds 153
7.4 Spatial heterogeneity 156
7.5 The wrap 164

8 Biotic interactions 165
8.1 A quick primer on biotic interactions 165
8.2 Competition 167
8.3 Predation 177
8.4 Hybrid zones as a collision of competitors 186
8.5 Evolutionary responses from the invaded community 189
8.6 The wrap 189

9 Management of invasive populations 192
9.1 Tumours 192
9.2 Cane toads 199
9.3 Gene drives 207
9.4 Spreading pathogens 213
9.5 Conclusions 216

Appendix A Diffusion confusion 218
A.1 Diffusion explained 218
A.2 Implications of diffusion 220

Appendix B Probability distributions, random numbers, and simulation 223
B.1 Probability distributions 223
B.2 Random numbers 228
B.3 Sampling from specified distributions 228

Appendix C Natural invasions with documented trait shifts 230

Appendix D Experimental invasions 239
