DETAILED CONTENTS

FOCUS 1 Biochemical Thermodynamics: The First Law 1

TOPIC 1A Work and heat 2
- 1A.1 Work 2
- 1A.2 Heat 3
- 1A.3 Systems and surroundings 4
- 1A.4 The measurement of work 4
- 1A.5 The measurement of heat 9

TOPIC 1B Internal energy and enthalpy 13
- 1B.1 The internal energy 13
- 1B.2 The enthalpy 17

TOPIC 1C Calorimetry 21
- 1C.1 Bomb calorimeters 21
- 1C.2 Isobaric calorimeters 22
- 1C.3 Differential scanning calorimeters 23
- 1C.4 Isothermal titration calorimeters 24
- 1C.5 Case Study: Using calorimetry to screen small molecules for potential drug use 25

TOPIC 1D Fundamental processes 26
- 1D.1 Phase transitions 26
- 1D.2 Ionization 29
- 1D.3 Bond dissociation 29
- 1D.4 Case Study: The peptide bond 31

TOPIC 1E Chemical change 33
- 1E.1 The combination of reaction enthalpies 34
- 1E.2 Standard enthalpies of formation 34
- 1E.3 Enthalpies of formation and computational chemistry 36
- 1E.4 The variation of reaction enthalpy with temperature 37

FOCUS 2 Biochemical Thermodynamics: The Second Law 45

TOPIC 2A Entropy 46
- 2A.1 The direction of spontaneous change 46
- 2A.2 Entropy and the Second Law 47
- 2A.3 Absolute entropies and the Third Law of thermodynamics 51

TOPIC 2B Entropy in biology 54
- 2B.1 Entropy and reaction 54
- 2B.2 The hydrophobic effect 55
- 2B.3 Case Study: Using hydrophobicities to predict protein structure 57

TOPIC 2C The Gibbs energy 59
- 2C.1 Focusing on the system 59
- 2C.2 Work and the Gibbs energy 60
- 2C.3 Case Study: The action of adenosine triphosphate 61

FOCUS 3 Water and Aqueous Solutions 67

TOPIC 3A Water in transition 68
- 3A.1 The variation of Gibbs energy with pressure 68
- 3A.2 The variation of Gibbs energy with temperature 71

TOPIC 3B The thermodynamic properties of water 73
- 3B.1 The phases of water 73
- 3B.2 Characteristic points 76
- 3B.3 Surface tension 77

TOPIC 3C The thermodynamic description of aqueous solutions 80
- 3C.1 The chemical potential 81
- 3C.2 Ideal and ideal–dilute solutions 82
- 3C.3 Real solutions: activities 86

TOPIC 3D Water at equilibrium in solution 89
- 3D.1 The modification of boiling and freezing points 89
- 3D.2 Osmosis 90
- 3D.3 Water potential 93

FOCUS 4 Chemical Equilibrium 99

TOPIC 4A The thermodynamic background 101
- 4A.1 The reaction Gibbs energy 101
- 4A.2 The variation of $\Delta_r G$ with composition 103
- 4A.3 Reactions at equilibrium 104
- 4A.4 Case Study: Binding of oxygen to myoglobin and hemoglobin 106

TOPIC 4B The standard reaction Gibbs energy 109
- 4B.1 Standard Gibbs energies of formation 110
- 4B.2 Biochemical standard states 111
- 4B.3 Stability and instability 112

TOPIC 4C The response of equilibria to the conditions 114
- 4C.1 The presence of a catalyst 115
- 4C.2 The effect of pressure 115
- 4C.3 The effect of temperature 116

TOPIC 4D Coupled reactions in biochemistry 119
4D.1 The classification of coupling 119
4D.2 Case Study: ATP and parallel coupled reactions 120
4D.3 Case Study: The oxidation of glucose and sequentially coupled reactions 122

TOPIC 4E Proton transfer equilibria 126
4E.1 Brønsted–Lowry theory 126
4E.2 Protonation and deprotonation 127
4E.3 Polyprotic acids 132
4E.4 Case Study: The fractional composition of a solution of lysine 133

TOPIC 4F Buffer solutions 137
4F.1 Acid and base buffers 137
4F.2 Case Study: Buffer action in blood 138
4F.3 pH regulation by ion transport 139
4F.4 Other buffer systems 140

TOPIC 4G Ligand binding equilibria 142
4G.1 Ligand binding to a single site 142
4G.2 Ligand binding to multiple sites 143
4G.3 Cooperative binding 144
4G.4 Avidity 146

FOCUS 5 Ion and Electron Transport 155

TOPIC 5A Ion transport across membranes 156
5A.1 Ions in solution 156
5A.2 The thermodynamics of ion transport 158
5A.3 The Donnan equilibrium 158
5A.4 Ion channels and ion pumps 160
5A.5 Case Study: Action potentials 161

TOPIC 5B Electron transfer reactions 164
5B.1 The thermodynamics of electron transfer 165
5B.2 Electrode potentials 166
5B.3 Half-reactions 168
5B.4 Applications of standard potentials 171

TOPIC 5C Electron transport chains 174
5C.1 Electron transfer between redox centres 174
5C.2 The respiratory chain 175
5C.3 Photosynthesis 178

FOCUS 6 The Rates of Reactions 185

TOPIC 6A Reaction rates 186
6A.1 The definition of reaction rate 186
6A.2 Rate laws and rate constants 187
6A.3 Reaction order 188
6A.4 The determination of the rate law 188
6A.5 Experimental techniques 191
6A.6 Case Study: Measuring the kinetics of protein folding 192

TOPIC 6B The rate laws of single-step reactions 194
6B.1 Zeroth-order reactions 194
6B.2 First-order reactions 195
6B.3 Second-order reactions 197
6B.4 The approach to equilibrium 199

TOPIC 6C The rate laws of multi-step reactions 202
6C.1 Consecutive reactions 202
6C.2 Building rate laws 203
6C.3 Case Study: Kinetics of protein unfolding 207
6C.4 Kinetic and thermodynamic control 207

TOPIC 6D The values of rate constants 209
6D.1 Diffusion control and activation control 209
6D.2 The temperature dependence of rate constants 210
6D.3 Factors other than temperature that affect rate constants 214

FOCUS 7 Biochemical Kinetics 225

TOPIC 7A Enzyme action 226
7A.1 Enzyme reaction rates 226
7A.2 The Michaelis–Menten mechanism 227
7A.3 The analysis of complex mechanisms 230
7A.4 The catalytic efficiency of enzymes 233

TOPIC 7B Enzyme inhibition 235
7B.1 The kinetics of inhibition 235
7B.2 The classification of inhibition 236
7B.3 Case Study: Therapeutic use of an enzyme inhibitor 238

TOPIC 7C Diffusion in biological systems 241
7C.1 Molecular motion in liquids 241
7C.2 Diffusion in a concentration gradient 242
7C.3 The migration of ions in an electric field 244
7C.4 Case Study: Electrophoresis 246
7C.5 Diffusion across membranes 247
7C.6 Case Study: Ion migration through K^+ channels 249

TOPIC 7D Electron transfer 251
7D.1 The rate of electron transfer 251
7D.2 Protein electron transfer processes 254
7D.3 Case Study: Electron transfer in photosystem I 255

FOCUS 8 Atoms 263

TOPIC 8A The principles of quantum theory 264
8A.1 The emergence of quantum theory 265
8A.2 The Schrödinger equation 269
8A.3 The uncertainty principle 271
8A.4 Case Study: Microscopy 272

TOPIC 8B The quantum mechanics of motion 275
8B.1 Translation 275
8B.2 Rotation 281

8B.3 Vibration 284
8B.4 Case Study: Tunnelling and microscopy 286

TOPIC 8C Atomic orbitals 289
8C.1 The energy levels of hydrogenic atoms 289
8C.2 The wavefunctions of hydrogenic atoms 290

TOPIC 8D Many-electron atoms 296
8D.1 The orbital approximation 296
8D.2 The role of electron repulsion 297
8D.3 The building-up principle 298
8D.4 Three important atomic properties 300
8D.5 Case Study: Lewis acidity and the biological role of Zn^{2+} 302

FOCUS 9 Molecules 309

Prologue 310

TOPIC 9A Valence bond theory 311
9A.1 Diatomic molecules 311
9A.2 Polyatomic molecules 313

TOPIC 9B Molecular orbital theory: diatomic molecules 318
9B.1 Linear combinations of atomic orbitals 318
9B.2 Homonuclear diatomic molecules 321
9B.3 Case Study: A biochemically active homonuclear diatomic molecule, O_2 325
9B.4 Heteronuclear diatomic molecules 326
9B.5 Case Study: A biochemically active heteronuclear diatomic molecule, NO 328

TOPIC 9C Molecular orbital theory: polyatomic molecules 330
9C.1 Hückel theory 330
9C.2 Case Study: The unique role of carbon in biochemistry 334
9C.3 d-Metal complexes 334
9C.4 Case Study: Ligand-field theory and the binding of O_2 to hemoglobin 337
9C.5 Computational structural techniques 338

FOCUS 10 Macromolecules and Self-Assembly 345

TOPIC 10A Molecular interactions 346
10A.1 Interactions between partial charges 346
10A.2 Electric dipole moments 347
10A.3 Interactions between dipoles 349
10A.4 Interactions involving induced dipoles 350
10A.5 Hydrogen bonding 352
10A.6 Steric repulsion 353
10A.7 Case Study: Molecular recognition in biology and pharmacology 354

TOPIC 10B Macromolecular structure 356
10B.1 Random coils 356
10B.2 Case Study: Oligosaccharides and polysaccharides 359
10B.3 Case Study: Nucleic acids 360
10B.4 Case Study: Proteins 361

TOPIC 10C Conformational stability and molecular aggregation 366
10C.1 The stability of nucleic acids 367
10C.2 Case Study: The polymerase chain reaction 367
10C.3 The stability of proteins 368
10C.4 Protein phase diagrams 372
10C.5 Case Study: Protein crystallization 373
10C.6 Micelles and biological membranes 373
10C.7 Mobility transitions of membranes 375

TOPIC 10D Computer-aided simulation 377
10D.1 Molecular forcefields 377
10D.2 Molecular mechanics and molecular dynamics 378
10D.3 Quantitative structure–activity relationships 380

FOCUS 11 Biochemical Spectroscopy 387

TOPIC 11A General features of spectroscopy 389
11A.1 Experimental techniques 390
11A.2 The intensity of absorption 391
11A.3 The molecular origin of intensity 394
11A.4 Case Study: Biosensor analysis 396

TOPIC 11B Vibrational spectroscopy 399
11B.1 The vibrations of diatomic molecules 399
11B.2 Vibrational transitions 400
11B.3 The vibrations of polyatomic molecules 402
11B.4 Case Study: Vibrational spectroscopy of proteins 404
11B.5 Case Study: Vibrational microscopy 406

TOPIC 11C Ultraviolet and visible spectroscopy 408
11C.1 The Franck–Condon principle 409
11C.2 Chromophores 410
11C.3 Optical activity and circular dichroism 411

TOPIC 11D Photoactivation and its consequences 413
11D.1 Fluorescence and phosphorescence 413
11D.2 The kinetics of photochemical processes 416
11D.3 Advanced fluorescence techniques 420
11D.4 Case Study: Vision 421
11D.5 Case Study: Photosynthesis 422
11D.6 Case Study: Radiation damage of DNA 423
11D.7 Case Study: Photodynamic therapy 423

TOPIC 11E Nuclear magnetic resonance 425
11E.1 Nuclei in magnetic fields 425
11E.2 Time- and frequency-domain spectra 427
11E.3 The information in a spectrum 429
11E.4 Conformational conversion and chemical exchange 434
11E.5 The nuclear Overhauser effect 435
11E.6 Two-dimensional NMR 437
11E.7 Magnetic resonance imaging 438

TOPIC 11F Electron paramagnetic resonance 441
11F.1 Electrons in magnetic fields 442
11F.2 The *g*-value 442
11F.3 Hyperfine structure 443
11F.4 Anisotropy, motion, and line shape 444
11F.5 Dipolar coupling and electron exchange 445

FOCUS 12 Scattering Techniques 457

TOPIC 12A Scattering by individual molecules 458
12A.1 Rayleigh scattering 458
12A.2 Multiple-angle light scattering 459
12A.3 Small-angle X-ray and neutron scattering 460
12A.4 Dynamic light scattering 461

TOPIC 12B Cooperative scattering: X-ray diffraction 463
12B.1 The description of crystals 464
12B.2 Lattice diffraction 466
12B.3 Case Study: The structure of DNA 466
12B.4 Unit cell diffraction 467
12B.5 Practical aspects 469

FOCUS 13 Gravimetric Methods 475

TOPIC 13A Ultracentrifugation 476
13A.1 Sedimentation techniques 476
13A.2 Velocity sedimentation 476
13A.3 Equilibrium sedimentation 477

TOPIC 13B Mass spectrometry 480
13B.1 Matrix-assisted laser desorption/ionization 480
13B.2 Electrospray ionization 481
13B.3 Case Study: Proteomics 483

LIST OF THE CHEMIST'S TOOLKITS

1	Work, pressure, and energy	6
2	Integration	7
3	The perfect gas	8
4	Differentiation	15
5	Electrical charge, current, power, and energy	22
6	Measures of concentration	80
7	Series expansions	92
8	Quadratic and cubic equations	130
9	Oxidation numbers	168
10	Classical mechanics	264
11	Waves	266
12	Determinants	333

LIST OF TABLES

Table 1A.1	Heat capacities of selected substances	10
Table 1D.1	Standard enthalpies of transition at the transition temperature	27
Table 1D.2	(a) Ionization enthalpies and (b) electron-gain enthalpies of selected elements at 298 K	29
Table 1D.3	Selected bond enthalpies, ΔH(A–B)/(kJ mol^{-1})	30
Table 1D.4	Mean bond enthalpies, ΔH_B/(kJ mol^{-1})	31
Table 1E.1	Standard enthalpies of combustion	33
Table 1E.2	Standard enthalpies of formation at 298.15 K	36
Table 2A.1	Entropies of vaporization at 1 atm and the normal boiling point	50
Table 2A.2	Standard molar entropies of some substances at 298.15 K	52
Table 2B.1	Hydropathy index	57
Table 3B.1	Critical constants	76
Table 3C.1	Henry's law constants for gases dissolved in water at 25 °C	84
Table 3C.2	Activities and standard states	87
Table 3D.1	Cryoscopic and ebullioscopic constants	90
Table 4A.1	Thermodynamic criteria of spontaneity	105
Table 4B.1	Standard Gibbs energies of formation at 298.15 K	110
Table 4D.1	Transfer potentials at 298.15 K	122
Table 4E.1	Typical intracellular pH values	126
Table 4E.2	Acidity and basicity constants at 298.15 K	129
Table 4E.3	Successive acidity constants of polyprotic acids at 298.15 K	132
Table 4E.4	Acidity constants of amino acids at 298.15 K	134
Table 5A.1	Relative ion permeabilities for neuronal membranes of vertebrates	161
Table 5B.1	Standard electrode potentials at 25 °C	167
Table 5B.2	Biochemical standard potentials at 25 °C	170
Table 6A.1	Kinetic techniques	191
Table 7C.1	Diffusion coefficients in water, D/(10^{-9} m^2 s^{-1})	242
Table 7C.2	Electrophoretic mobilities in water at 298 K, u/(10^{-8} m^2 s^{-1} V^{-1})	245
Table 7C.3	Electrophoresis techniques	246
Table 8D.1	Atomic radii of main-group elements, r/pm	300
Table 8D.2	First ionization energies of main-group elements, I/eV	301
Table 8D.3	Electron affinities of main-group elements, E_{ea}/eV	302
Table 8D.4	The ionic radii, z/r_{ion} ratios, and pK_as for deprotonation of selected aqueous cations	302
Table 9A.1	Hybrid orbitals	315
Table 9B.1	Electronegativities of the main-group elements	326
Table 10A.1	Partial charges in polypeptides	346
Table 10A.2	Dipole moments and mean polarizability volumes	347
Table 10B.1	Radii of gyration of biological macromolecules and assemblies	358
Table 10C.1	Variation of micelle shape with the surfactant packing parameter	374
Table 11B.1	Typical vibrational wavenumbers	404
Table 11B.2	Typical vibrational wavenumbers for the amide I and II bands in polypeptides	405
Table 11C.1	Colour, wavelength, frequency, and energy of light	408
Table 11C.2	Near-UV electronic absorption properties of amino acids, purine, and pyrimidine bases in water at pH = 7	411
Table 11D.1	Values of R_0 for some donor–acceptor pairs	419
Table 11E.1	Composition of a nucleus and the nuclear spin quantum number	426
Table 11E.2	Isotopes and their nuclear magnetic properties	426
Table 12A.1	Solvent composition for contrast matching in SANS	461
