CHAPTER 1 Defensive responses in invertebrates: Evolutionary and neural aspects 1
Giancarlo Carli and Francesca Farabollini

1. Defense responses in lower invertebrates 2
   1.1 Neural organization 2
   1.2 Defensive responses and behavioral variability 3
   1.3 Active and passive behavioral defense 6
2. Defense responses in higher invertebrates 8
   2.1 Nervous system in advanced phyla of invertebrates 8
   2.2 Tonic immobility (TI) in higher invertebrates 9
   2.3 Circulatory responses associated to threatening stimuli and TI 11
   2.4 Respiratory responses associated to threatening stimuli and TI 13
   2.5 Neurophysiological mechanisms of TI in Arthropoda 14
   2.6 Modulation of TI in invertebrates 16
3. Plasticity of defense and adaptative role of tonic immobility 17
   3.1 Prey defense and TI: Specificity prey-predator 17
   3.2 TI as a trait of animal personality 20
   3.3 The adaptive significance of TI and genetic behavioral correlations in insects 22
   3.4 TI as an adaptive response in intraspecific context 27

References 28

CHAPTER 2 Introduction to defensive behavior in vertebrates 37
Giancarlo Carli and Francesca Farabollini

1. Ethology and biology of defense 37
2. Motivation in defensive behavior 40
3. Behavioral flexibility and the coping style 42
4. The role of tonic immobility (TI) in defense 44
5. TI as a behavioral trait of personality 46

References 47

CHAPTER 3 Neural circuits of fear and defensive behavior.....51
Giancarlo Carli and Francesca Farabollini

1. Fear and threat perception.....51
2. Visual detection and underlying circuits.....53
3. Immobility-related defense and behavioral arrest.....55
4. Circuits underlying fear-related behavior.....56
   - 4.1 Amygdala.....56
   - 4.2 Hypothalamus.....58
   - 4.3 Midbrain periaqueductal gray (PAG).....59
5. Fear circuits and tonic immobility (TI).....62
6. The avian brain organization and circuits involved in TI.....64

References.....65

CHAPTER 4 The fear hypothesis and tonic immobility (TI) modulation: Early studies in chickens.....71
Giancarlo Carli and Francesca Farabollini

1. The fear hypothesis in TI response.....72
   - 1.1 Social and environmental variables affecting TI.....72
   - 1.2 Pre-induction shock.....73
   - 1.3 Definition of methods and procedures.....74
   - 1.4 The stuffed hawk and the eyes effect.....75
   - 1.5 Dynamic vs static components of stimuli.....76
   - 1.6 Fear and awareness.....77
   - 1.7 The experimenter as a predator.....77
   - 1.8 Development of TI and other fear-associated responses.....77
   - 1.9 Familiarity with the environment.....79
   - 1.10 Conditioned fear.....80
2. Fear and TI in adult animals.....83
   - 2.1 Induction procedures, sex and strain.....84
   - 2.2 Handling, novelty, and familiarity.....85
   - 2.3 Conspecific vocalization.....86
   - 2.4 Social rank and group composition.....87
   - 2.5 Effects on TI of cage position.....88
   - 2.6 The salience of the experimenter.....90
3. The influence of rearing conditions, early life experiences and imprinting on fear-related responses.....91

References.....95

CHAPTER 5 Environmental, ecological and methodological factors of Tonic Immobility (TI) modulation 101
Giancarlo Carli and Francesca Farabollini

1. Temperature, age and induction procedures: Interactions in TI modulation 102
2. Circadian rhythms and TI periodicity 105
   2.1 Circadian variation of TI in different species 105
   2.2 Variables affecting periodicity of TI in chickens 107
   2.3 The adaptive significance of TI periodicity 109
3. Habituation and sensitization of TI 113
4. Brain lesions and TI habituation 119
5. Ecological factors, domestication and genetic localization associated to TI 125

References 127

CHAPTER 6 The neuroethological approach to defense in rabbit 133
Giancarlo Carli and Francesca Farabollini

1. The neuroethological approach 133
2. The implanted rabbit in its home cage 134
3. The seminatural setting 136
   3.1 A prey-predator context in the seminatural setting 137
   3.2 A conspecifics confrontation in the seminatural setting 139
   3.3 The dominant-subordinate interactions in the seminatural setting 141
4. Neuroethology of TI 142

References 143

CHAPTER 7 Neurophysiological mechanisms involved in tonic immobility (TI) 145
Giancarlo Carli and Francesca Farabollini

1. Brain and muscles activity 145
2. The influence of earlier experiences on EEG during TI 150
3. The play-possum model 151
4. Hippocampal electrical activity 151
5. Spinal reflexes 154
6. Neural structures involved in TI 155
7. Brain metabolic activity 157
8. Learning and memory 159

References 163

CHAPTER 8 Neuromediators and defensive responses including tonic immobility (TI): Brain areas and circuits involved 167
Giancarlo Carli and Francesca Farabollini

1. Serotonin (5-HT) and defensive responses including TI 168
2. Amygdala and 5-HT receptors in TI modulation 170
3. Acetylcholine (Ach), behavioral inhibition and TI 172
4. Ach and the tegmental-hypothalamic-amygdala-PAG circuits of defense 173
   - 4.1 Tegmentum 173
   - 4.2 Hypothalamus 174
   - 4.3 Amygdala 176
   - 4.4 PAG and converging effects of ACh and 5HT 177
5. The enkephalinergic/GABAergic control of the PAG output for TI modulation 180
6. TI and cataplexy: The role of the neuromediator orexin 180

References 184

CHAPTER 9 Autonomic correlates of defense responses, including tonic immobility (TI) 191
Giancarlo Carli and Francesca Farabollini

1. Introduction 191
2. Organizational and evolutionary aspects 192
3. Coordinated heart rate and ventilatory modifications during defensive responses from fish to reptiles 193
   - 3.1 Fishes 193
   - 3.2 The Todfish model of TI 195
   - 3.3 Amphibians 196
   - 3.4 Reptiles 196
4. Thermoregulatory mechanisms and cardiorespiratory correlates of TI and other defense immobilities in birds 199
   - 4.1 Thermoregulation 199
   - 4.2 Heart rate and heart rate variability 202
5. Cardiorespiratory correlates of TI and other defense immobilities in mammals 204
   - 5.1 Orienting response 204
   - 5.2 Freezing correlated with bradycardia 205
   - 5.3 Freezing correlated with tachycardia 211
   - 5.4 Extreme stressful conditions correlated with tachycardia 211
   - 5.5 Cardiorespiratory correlates of restraint-sustained immobility 214

5.6 Cardiovascular correlates of TI in different animal models 217
References 222

CHAPTER 10 Neuroendocrine correlates of stress and tonic immobility 229
Giancarlo Carli and Francesca Farabollini

1. Neuroendocrine systems and acute stress response 229
2. HPA axis, neural mechanisms and corticosteroid reactivity 231
3. Individual variability in corticosteroid reactivity and coping style 232
4. Individual variability in corticosteroid reactivity and defense responses including TI 235
5. TI susceptibility in relation to corticosteroid levels 238
6. The time-course of adrenocortical system modifications during TI in the rabbit 241
7. HPG axis modifications in response to stress and TI 243
8. The time-course of gonadal hormone modifications during TI, in the rabbit 246

References 248

CHAPTER 11 Pain control in tonic immobility (TI) and other immobility models 253
Giancarlo Carli and Francesca Farabollini

1. The thalamic gate 253
2. The nociceptive system 255
   - 2.1 Nociceptive pathways 255
   - 2.2 Type of defense responses 256
   - 2.3 Opiate pain control 257
3. Formalin pain and TI 259
   - 3.1 TI, formalin pain and EEG in rabbits 259
   - 3.2 The formalin test in rodents 262
   - 3.3 Formalin pain, β-endorphin and TI 264
   - 3.4 TI Anesthesia in rabbits 268
4. Stress induced analgesia in rats 269
5. Restraint-induced analgesia 271
   - 5.1 Restraint 271
   - 5.2 Aversiveness of TI induction 272
   - 5.3 Analgesia after restraint in fish 272
   - 5.4 Persistent restraint and evoked postures in the developing rat 273
   - 5.5 Restraint in the adult rat 274

5.6 Post-pinch immobility in mice 275
5.7 Pinch-maintained immobility in mice 277
5.8 Noxious clipping in rats 280
5.9 The twitch procedure in horses 283
5.10 Non-noxious clip-maintained immobility in rabbits 283
5.11 Non noxious restraint-maintained immobility in monkeys 285
6. TI, analgesia and inflammation 287
6.1 Post-TI analgesia in guinea pigs 287
6.2 Neural control of inflammation and TI 290
6.3 Overview of TI antinociceptive mechanisms 294
7. Pain control during TI in other animal species 295
References 295

CHAPTER 12 Tonic immobility as a survival, adaptive response and as a recovery mechanism 305
Giancarlo Carli and Francesca Farabollini
1. Immobility-related defense and survival in invertebrates and vertebrates 305
2. Threat-sensitivity hypothesis and behavioral flexibility 307
3. Autotomy and TI interaction 308
4. TI as a morphological defense 309
5. TI role in social insects' colonies 309
6. Immobility reduces predator's attention 311
7. Prey/predator distance and stimulus intensity in relation to the opportunity to escape 315
8. Genetic basis of short and long TI duration in insects 316
9. Genetic behavioral correlations of TI 320
10. TI as a recovery mechanism from preceding disruptive experiences 322
11. Immobility in communication of reproductive readiness 324
12. A comparison of TI in animals with behavioral inhibition during assault in humans 324
References 325

CHAPTER 13 Synthesis of defense response characteristics 331
Giancarlo Carli and Francesca Farabollini
1. Tonic immobility (TI) 331
2. Freezing 334
3. Restraint-sustained immobility 335
