Contents

Preface iii

1. Introduction to Microbe Hunting 1
Introduction to microbes 1
Importance of microbes 4
Microbe hunting techniques 5
Applications of microbes 7
Future of microbe hunting 10
References 11

2. Microbial Diversity and Ecosystems 19
Introduction 19
Scope of microbial diversity 20
The measurement of microbial diversity 21
The importance of microbial diversity to human health and well-being 23
Strategies for conserving microbial diversity 25
References 26

3. BIOLOG: The Advanced Assessment Methods for the Implementation of Microbe Hunting 34
Introduction 34
BIOLOG plates 37
Microbial community analysis with EcoPlates 40
Acknowledgement 40
References 40

4. Overview of DNA Library Preparation Techniques for Next-Generation Sequencing 44
Introduction 44
Why is DNA library preparation so important and necessary? 45
Types of library preparation technique 45
Steps for library preparation 47
Acknowledgement 54
References 54

5. Bioinformatics Tools for the Identification and Phylogenetic Analysis of Microorganisms **57**
Introduction 57
Basic Local Alignment Search Tool (BLAST) 57
EZBioCloud 97
Acknowledgements 103
References 103

6. Next-Generation Sequencing (NGS) Workflow: Amplicon Sequencing for Barcoding and Integrative Taxonomy **105**
Introduction 105
Advantages of NGS technology 106
Types of NGS applications 107
Analyses of the MiSeq data set 111
Acknowledgements 114
References 114

7. New Tools for Taxonomic Classification of Uncultivated Microbes and the Seqcode to Classify Them **117**
Introduction 117
New tools and rules for nomenclature and taxonomy of prokaryotes 118
Acknowledgements 129
References 129

8. Quantitative Insights into Microbial Ecology Version 2.0 (QIIME2) for End-to-End Analysis of Metagenome Sequence Data by /Bolyen et al., 2019 (#As it is) **132**
Introduction 132
"Moving Pictures" tutorial 133
Demultiplexing sequences 135
Sequence quality control and feature table construction 136
Feature Table and Feature Data summaries 138
Generate a tree for phylogenetic diversity analyses 139
Taxonomic analysis 145
Differential abundance testing with ANCOM-BC 145
Supervised machine learning using QIIME2 147
Acknowledgements 147
References 148

9. Microbial Dark Matter—Taxonomy, Importance, Ethical and Philosophical Considerations **150**
Introduction 150
Habitat of microbial dark matter 151

Hidden potential of microbial dark matter 151
Taxonomy of microbial dark matter 154
Ethical and philosophical considerations of microbial dark matter sequence use for taxonomy and identification 155
References 156

10. Future Horizons of Microbe Hunting: Unveiling the Secrets of the 22nd Century and Beyond 163
Introduction 163
Beyond the borders of culturing: demystifying the "unculturable" majority 163
Microbiome of planets other than Earth, for example, Mars Microbiome, to be carried to Mars or Native Mars Microbiome? 164
References 165

11. A Perspective on Quantum Supercomputers and Artificial Intelligence for Microbe Hunting 168
Introduction 168
Conclusions 170
References 171

Index 177
