Author Bio xiii

Chapter 1 Buffers 1

Making Buffers 2
Method 1: A Free Acid Titrated by NaOH 2
Method 2: A Free Base Titrated by HCl 2
Method 3: Adding Free Acid and Free Base to Make the Buffer 3
Concentrated Buffers 4
Goal 5
Optional Goal 6
Pre-Lab Questions 6
Post-Lab Questions 7

Chapter 2 Assays 9

1. Lactate Dehydrogenase: Assay by Substrates Alone 9
2. Phosphofructokinase: Assay by Metabolic Pathway 10
3. Assay by Immunochemistry 12
4. Catalase: Assay by Physical Properties 12
Ways of Reporting Enzyme Activity 13
Evaluating a Source for an Enzyme 14
Serial Dilutions 14
Goal 15
Materials 15
Instructions 16
Pre-Lab Questions 19
Post-Lab Questions 20

Chapter 3 Protein Concentration 21

1. Absorbance at 280 nm 21
2. The Bradford Assay 22
3. Bicinchionic Acid Assay 23
Finding the Concentration 23
Goal 26
Materials 26
Instructions 26
Recipe for Bradford Reagent 28
Pre-Lab Questions 28
Post-Lab Questions 29

Chapter 4 ELISA 31

Goal 33
Materials 33
Instructions 33
Pre-Lab Questions 34
Post-Lab Questions 35

Chapter 5 Salting Out Proteins and Other Biomolecules 37

Goal 40
Method 40
Data Analysis 41
Pre-Lab Questions 42
Post-Lab Questions 42

Chapter 6 A Discussion of Isoelectric Point and Effective Charge 45

Effective Charge 45
Isoelectric Points 47
Questions 50

Chapter 7 Column Chromatography 53

Types of Chromatography 54
Backbone Issues 59
Goal 60
Pre-Lab Questions 65
Post-Lab Questions 66

Chapter 8 Michaelis–Menten Kinetics 69

Cooperativity 73
Data in Triplicate 75
Goal 75
Procedure 76
Catalase: A Simple Assay 76
Pre-Lab Questions 78
Post-Lab Questions 79

Chapter 9 Protein Purification 81

Dialysis 81
Purification Tables 82
Goal 85
Method 85
First Lab Session 85
Second Lab Session 86
Third Lab Session 86

Pre-Lab Questions 86
Post-Lab Questions 87

Chapter 10 Polyacrylamide Gels 89

Acrylamide Chemistry Affects Separations 89
Buffering Gels 91
Goal 92
Method 92
Loading and Running an SDS-PAGE Gel 93
Goal (Week 2) 93
Method 94
Pre-Lab Questions 96
Post Lab Questions 98

Chapter 11 *In Silico* Biochemistry: The Evolution of Globins 101

Globins 101
BLOSUM 102
Aligning and Scoring Sequences 106
Gap Penalties 106
Alignment Tools 107
Calculating Evolutionary Distance 108
Goal 111
Post-Lab Questions 114
References 114

Chapter 12 Growing Crystals of Hemoglobin 115

Hanging Drop and Sitting Drop Methods 116
Refining Crystal Growth 119
Other Issues 120
Objective 121
Procedure 121
Materials 121
Pre-Lab Questions 126
Post-Lab Questions 126

Chapter 13 Enzyme Inhibition 127

Competitive Inhibition 127
Uncompetitive Inhibition 129
Mixed Inhibition 131
Acid Phosphatase 132
Objective 133
Materials 134
Post-Lab Questions 136
Reference 136

Chapter 14 Multisubstrate Kinetics 137

Product Inhibition 137
Experimental Design 139
Objective 140
Materials 140
References 143

Chapter 15 Fluorescence and Denaturation 145

Denaturants 145
Structural Studies by Fluorescence 147
Fluorescence Resonance Energy Transfer (FRET) 150
FRET Studies for Unfolding 151
Experimental Design Considerations 151
Fluorometer Design 151
Inner Filter Effect 151
Using an Unfolding Curve to Find K_{fold} and ΔG_{fold} 153
Goal 156
Materials 156
Method 156
Post-Lab Questions 158

Chapter 16 Fluorescence Studies of Ligand Binding 159

Experimental Considerations 161
Concentration Effects 161
Ligand Fluorescence 161
Fitting Data to a Loss of Intensity 161
Goal 164
Materials 164
Method 165
Data Analysis 167
Post-Lab Questions 167
References 168

Chapter 17 DNA Restriction Digests 169

Gene Expression 169
Restriction Endonucleases 171
Plasmid Types and Purposes 172
Restriction Digests 173
Goal 173
Procedure 174
Pre-Lab Questions 176
Tutorial: How to Construct a Restriction Map, Logically 176

Chapter 18 Western Blotting 179

Goal 181
Set-Up 181
Materials 181
Part 1 181
Part 2 182
Part 3 182
Instructions 182
Part 1: Native Gel Electrophoresis 182
Part 2: Blotting 183
Part 3: Immunostaining 183
References 184
