CONTENTS

CHAPTER 1

INTRODUCTION 1—8

CHAPTER 2

BIOSYNTHETIC PROCESSES IN LIVING CELLS 9—31

CHAPTER 3

GENE IN DETERMINATION AND DIFFERENTIATION 32—56

Genome Equivalence, Differential Gene Expression

CHAPTER 4

GENETIC INFORMATION IN DIFFERENTIATION 57—97

The Nature of Genetic Information, The Structure of Chromatin, Organization of DNA in Chromatin, The Utilization of Genetic Information During Cell Differentiation, Processing of RNA, Protein Synthesis

CHAPTER 5

GENE EXPRESSION DURING DEVELOPMENT 98—126

Evidence for Differential Gene Transcription, Transcriptional Control Mechanisms, Regulation of Puffing in Polyene Chromosomes by Ecdysone, Regulation of Transcription by Vertebrate Steroid Hormones, Posttranscriptional Controls

CHAPTER 6

THE CELLULAR BASIS OF MORPHOGENESIS 127—156

The Cytoskeleton, The Cell Surface, The Cell Surface and Cytoskeleton in Morphogenesis of Animal Embryos, Morphogenesis of Plant Cells: Role of Microtubules

CHAPTER 7

INITIATION OF DEVELOPMENT 157—203

Maternal Regulation Over Early Development, Expression of the Embryonic Genome, Gene Expression during Initial Development of Mammals, Macromolecular Synthesis during Seed Develpment and Germination

CHAPTER 8

NUCLEO-CYTOPLASMIC INTERACTIONS 204—238

Biology and Biochemistry of the Alga Acetabularia, Morphogeneic Substances and mRNA : Experiments with Inhibitors, Biochemistry of Anucleate Fragments of Eggs, The Importance of the nucleus for Embryonic Development, Biochemistry of Early Development Mutants, "Transgenic" Mice and Teratocarcinoma, Conclusions

CHAPTER 9

HOW CELLS DIFFERENTIATE 239—266

General Introduction, Specific Properties of Cell Membranes, Effects of Tissue Extracts on Cell Differentiation, Immunological Studies of Embryonic Differentiation, Enzyme Synthesis and Embryonic Differentiation, Differentiation of Cultured Embryonic Cells, Embryonic Differentiation and Cancer, The Future of Molecular Embryology

INDEX 267—270
