A treasure trove of illuminating quotations from the legendary naturalist

The Quotable Darwin presents Charles Darwin (1809–1882) in all his many dimensions—the naturalist, traveler, scientific thinker, and controversial author of *On the Origin of Species*, the book that shook the world. Featuring hundreds of quotations carefully selected by renowned Darwin biographer Janet Browne, the book draws from Darwin's writings, letters, autobiographical reminiscences, and scientific notebooks. It offers a multifaceted portrait that takes readers through his youth, his famous voyage on the *Beagle*, the emergence of the idea of evolution, his gradual loss of religious faith, and his efforts to elaborate a theory about the natural origin of all living beings—a theory that dangerously included humans. A delight for the browser and reader, *The Quotable Darwin* provides a vivid and revealing picture of a remarkable scientist and writer who was always thinking deeply about the natural world.

"Darwin vividly emerges as a crack shot with a tin ear for music, a loving father, a would-be anthropologist struggling to understand indigenous peoples and the consummate scientist."
BARBARA KISER, *Nature*

JANET BROWNE is the Aramont Professor Emeritus of the History of Science at Harvard University. Her books include the acclaimed two-volume biography of Darwin, *Charles Darwin: Voyaging* and *Charles Darwin: The Power of Place* (both Princeton).
