Manuscripts must be accompanied by the "Copyright Transfer Statement" (the form is regularly published in this journal).

Manuscripts in electronic form. Submission of electronic data is encouraged. Springer offers a user-friendly **Word document template** for writing your manuscript. Please consult the *Technical instructions for manuscripts and illustrations in electronic form* published regularly in this journal. Please do not transmit any data to the publisher until your manuscript has been reviewed and accepted for publication.

Supplementary material. Data which is of primary interest only to those readers who want more complete data for comparison purposes, will not be printed in the journal. If submitted in electronic form, this material will be put on Springer-Verlag's server and will be accessible free of charge through the World Wide Web at <http://link.springer.de>.

2. Format

Language: English.

Manuscript: one original (typed on one side of the paper only and double-spaced with wide margins) and two copies, one set of original illustrations and two sets of photocopies.

Title page: full title, name and academic address of each author, **indicating clearly the corresponding author, his/her fax number and e-mail address.**

Abstract and Keywords: in no more than 150 words define the objects, methods, and conclusions as three distinct sections of the Abstract. Around 6–8 Keywords must be furnished that differ from the title and abstract to increase the search and retrieval possibilities.

Introduction: identify succinctly the problem being resolved and the reasons for undertaking the study.

Materials and methods: list clinical or experimental material and the specifics of the scientific methodology undertaken.

Observations and results: express these in descriptive and statistical terminology; use percentages *only* for series in excess of 100 and fractions (e.g., 4/27) for series of less than 100.

Discussion and conclusions: integrate bibliographic data into your observations so as to establish relevance for the conclusions you draw, stating the latter clearly as you see them.

Tables and illustrations: present results either as graphs or tables, not both; number consecutively all figures (photographs, graphs, diagrams, etc.); line drawings to be submitted in black and white, computer drawings must be of the same quality as line drawings; illustrations must be up to 8.6 cm column width and 17.6 cm page width and in the form of sharp, high-contrast prints on glossy paper. Legends: type on a separate page, stating briefly the necessary information, presenting magnification and referring specifically to template-applied, or rub-on letters or arrows. For *color illustrations* the authors will be expected to make a contribution of € 485 per article towards the extra costs. Each table should be typed on a separate sheet and numbered consecutively with arabic numerals. Footnotes to tables should be indicated by lowercase superscript letters.

Size of manuscripts: manuscripts should not exceed 18 double-spaced typewritten pages, including figures, tables, illustrations, and reference list.

References: with the exception of review papers, the references should be limited to 20; significant historical and "pace-setting" papers must be cited; emphasis, qualitative and quantitative, should be given to papers published during the last 10 years; the author is responsible for the accuracy of the references. Citations in the text should be identified by numbers in brackets, and the list of references at the end of the papers should be both alphabetized under the first author's name and numbered. Works by two authors are in alphabetical order by co-author, and those by more than two authors in chronological order. Only works referred to in the text and already accepted for publication can be included:

a) Articles from journals: name(s) and initial(s) for all authors, year in parentheses, full title, journal name as abbreviated in *Index Medicus*, volume followed by a colon, first and last page numbers.

Ammirati M, Raimondi AJ (1987) Cerebrospinal fluid shunt infections in children. A study of the relationship between the etiology of hydrocephalus, age at the time of shunt placement, and infection rate. *Childs Nerv Syst* 3: 106–108

b) Books: name(s) and initial(s) of all authors, year in parentheses, title, edition, publisher, place of publication.

Kricum R, Kricum ME (1987) Computed tomography of the spine, diagnostic exercises. Aspen, Rockville, Md

c) Multiauthored books: name(s) and initial(s) of all authors, year in parentheses, title of the paper. In: name(s) and initial(s) of all editors, title of the book, publisher, place of publication, first and last page numbers.

Hovind HJ (1986) Traumatic birth injuries. In: Raimondi AJ, Choux M, Di Rocco C (eds) Head injuries in the newborn and infant. (Principles of pediatric neurosurgery) Springer, New York Berlin Heidelberg, pp 87–109

References such as "personal communication" or "unpublished data" cannot be added to the reference list, but should be included in the text in parentheses; this also applies to papers presented at meetings but not yet published or accepted for publication. A date should be cited for both "personal communications" and "unpublished data."

3. Offprints. Thirty (30) offprints of each contribution are supplied free of charge. If you wish to order additional offprints you must return the order form with the corrected proofs. You are then entitled to receive a pdf file of your article for your own personal use.
