## Instruction to Authors

---

### **OIL GAS EUROPEAN MAGAZINE**

is an engineering journal published internationally and covering the entire field of oil and gas.

The journal's range of topics encompasses scientific, technological and market related articles in the fields of exploration and production, both onshore and offshore, refining and applications of petroleum and petroleum products, including petrochemistry.

These subject fields include the storage and transport of hydrocarbons, pipeline and plant engineering, as well as analytical methods. Articles in related engineering fields are likewise taken into consideration. The publications are subdivided with respect to type without explicit indication in the periodical into original scientific and engineering articles, survey articles, and brief communications.

In the event of acceptance for publication, the authors declare their consent to transference of copyrights as well as any other rights concerning further use of the article to the publisher. As a matter of principle, there exists no claim whatsoever on publication if manuscripts submitted. Manuscripts and figures are submitted at the author's risk and will only be returned upon request.

### **STYLE GUIDE FOR MANUSCRIPTS**

**Language:** Articles are published in the English language.

**Length:** In the case of original and survey articles, the maximal length of the manuscript, including tables and figures, should be 15 DIN A4 pages, 3/2-spaced, with 60 characters per line. If appropriate, the publisher, editor, or advisor will recommend abridgement of the manuscript.

**Title:** The title should be brief and concise. The use of abbreviations should be avoided.

**Abstract:** The article must be preceded by an abstract.

**Text section:** The text section should be subdivided into sections, as appropriate, with the use of subheadings and decimal classification. Short sentences facilitate comprehension by the reader. Abbreviations should be avoided if at all possible. In particular, engineering terms spelled out in full are a valuable aid to the reader unfamiliar with the specialised field involved. If the use of abbreviations should be unavoidable for any reason, they should be accompanied at first use by the corresponding word(s) spelled out in full. At the end of the article, a conclusion with an outlook concerning continued developments is advisable.

**Citations:** References to literature quoted at the end of the arti-

cle should be limited to the consecutive number in square brackets (refer to References).

**Quantities, units, nomenclature:** As a matter of principle, only the approved SI units and nomenclature are permissible. If units not defined by the international system are still customary, the values in SI units should always be given first and followed by the obsolete units in parentheses. The same applies to quantities and nomenclature.

**Author:** Academic titles, first and family names of the author, the company or institution as well as the location are published as a footnote. In the case of papers presented, the occasion, location, and date of the event concerned is also required for publication.

**Figures:** Figures are printed in black-and-white. For this purpose, black-and-white originals capable of being reproduced and with the highest possible contrast (high-gloss photographs, ink drawings, lantern slides) are necessary. The character size must be at least 1 mm after normal reduction to 90 mm. Transparencies for overhead projection are not original materials; the corresponding originals are better suited for reproductions. Figure captions should be listed on a separate sheet at the end of the manuscript. The figures should be numbered consecutively throughout the text.

**Tables:** Tables should be provided with a brief caption above. All tables should be numbered consecutively with Arabic numbers as first mentioned in the text. A reference to each table must be present in the text.

**Galley proofs:** The corresponding author receives a galley proof for correction. This proof should be inspected and returned immediately.

**Special prints / Separate reprints:** Up to 100 special prints can be ordered in advance. Separate reprints with an extra title, as well as larger quantities, are available only on subsequent order.

*Please consult the editors in the event of further questions. Manuscripts, which should include disk-files of text and figures, should be submitted to:*
