

Instructions to Authors

Journal of Microwave Power and Electromagnetic Energy
Published by the
International Microwave Power Institute

I. OBJECTIVES OF THE JOURNAL

The purpose of *Journal of Microwave Power and Electromagnetic Energy* (JMPEE) is to publish the results of original research that contribute significantly to the understanding of the theory and application of dielectric (microwave and RF) heating. Preference will be accorded to manuscripts that develop new concepts, applications or experimental approaches. Manuscripts that are primarily theoretical in nature must be directed toward explaining important results previously not understood, making important predictions that can be experimentally tested, or developing significant advances in theory.

Publication of preliminary or inconclusive results is discouraged, as is the simultaneous publication of manuscripts of overlapping content. **Submission of a manuscript to JMPEE implies that the same work has not been published nor is under consideration for publication elsewhere.** This policy also applies to material submitted for publication in an electronic database system of a public nature, which IMPI considers to constitute prior publication. In addition, no legal restrictions must exist, e.g., those associated with the filing of patents.

II. EDITORIAL ORGANIZATION

The Editor-in-Chief is appointed by the IMPI Board of Governors as the JMPEE technical editor and has the final responsibility for all editorial decisions. The Managing Editor, who is located in the IMPI headquarters office, is responsible for processing all manuscripts received and serves as the point of contact during the review process.

III. MANUSCRIPT SUBMISSION

All authors wishing to submit a manuscript for publication must send to IMPI the following:

- 1) **A Submittal Letter** with original signature, indicating the primary author to whom all correspondence shall be addressed, as well as his or her e-mail, fax and postal addresses.
- 2) **Copyright Form:** Must have original signature (Form included in this instruction packet).
- 3) A list of six (6) potential reviewers for the manuscript, including their email, address, fax and phone numbers.
- 4) **Page Charge Form:** JMPEE depends, in part, on the payment of page charges for its operation. A page charge of \$90 per printed page will be paid by all authors who are not members of the International Microwave Power Institute. The IMPI member page charge is \$40 per page. **Payment of the charge is mandatory** except in special situations. However, the ability to pay page charges does not guarantee a paper will be accepted for publication. The author, or his institution, is billed after a paper has been published.
- 5) **One paper copy** of the manuscript (see VI. ASSEMBLY/PREPARATION OF MANUSCRIPTS).
- 6) **One electronic disk**, either a 3.5" diskette or CD (see VI. ASSEMBLY/PREPARATION OF MANUSCRIPTS), containing the following:
 - a) One non-editable copy of the manuscript, including figures and references (saved in PDF or Tiff format).
 - b) One editable copy of the manuscript in MS Word, Wordperfect or Text format (saved as .doc, .rtf or .txt). If a non-Western version of the word-processing software was used to prepare the manuscript, save the file in rich-text format (RTF). Do NOT save files in "Text Only" (ASCII) mode.
 - c) A copy of each figure saved as a TIFF (.tif), PDF (.pdf) or EPS (.eps) format at a minimum resolution of 100 dpi.
 - d) All equations should be in symbol font when available. Complicated equations should be saved as a graphic file.

Send the complete packet to
JMPEE Managing Editor

1916 Sussex Road, Blacksburg, VA 24060 USA.

(If sending via courier, the telephone number should be included: 1.540.552.3070.)

Please note, **failure to include any item from this list will delay and possibly remove your manuscript from publication.** It is very important to include these items in your initial submission. Only original manuscripts will be returned to the author, and only if the paper is rejected after preliminary review.

IV. THE REVIEW PROCESS

Upon receipt, the Managing Editor reviews the document and files for completeness, grammar and spelling, as well as to ensure all paperwork is properly received. Manuscripts will not move forward in the publishing process until all documentation listed above (see “II. Manuscript Submission”) are received. After approval from the Managing Editor, the manuscript is then given a Manuscript Number and forwarded to the Editor-in-Chief for initial review. The Editor-in-Chief first judges whether its content falls within the scope of JMPEE. Manuscripts that are primarily descriptive, confirmative of previous work or of a highly specialized nature, do not address fundamental dielectric heating questions, or those that in the judgment of the Editor are not of sufficient interest to the readers of JMPEE are returned to the author without review.

Following the Editor-in-Chief’s assessment, manuscripts are sent to two independent reviewers for evaluation. Reviewers are selected through consultation with referenced authors and persons listed as potential reviewers for their competence in specialized areas of dielectric heating technology. They are expected to disqualify themselves if they have a conflict of interest, such as association with the author’s laboratory or preconceived opinions about the work. After reviews have been completed, the assessments will normally be sent to authors when a manuscript is returned to the author for revision. The author should reply to the specific recommendations of the reviewers and in an accompanying letter indicate those recommendations that have been incorporated into the revision and the reasons any have been disregarded.

The revised manuscript should be returned to the Managing Editor’s office within 30 days. A revised manuscript received beyond the 30-day period will be considered as a new submission, will receive a new number and usually will undergo a new review process. The revised manuscript will be reviewed to ensure all necessary changes have been made for publication. If further review is required, the manuscript will be sent to the original reviewers for final approval.

V. FINAL MANUSCRIPT SUBMISSION

The FINAL ACCEPTED VERSION of the manuscript must be submitted on disk. The disk should accompany the final accepted hard copy version of the manuscript. The version on the disk **MUST** exactly match the final version accepted in hard copy. Exceptions to this policy require prior approval of the Managing Editor. Please be sure to mark the disk as “Final Version.” Clearly label the disk with the manuscript number, the corresponding author’s last name and “Final Version” written clearly or typed.

Proofs:

Proofreading of galley pages is the responsibility of the corresponding author. Corrections other than printer’s errors should be avoided because they are expensive and may cause a delay in publication. Substantive changes will require editorial approval. Corrections should be marked in the margin as well as the text, using contrasting ink. Corrections exceeding one sentence and insertions should be typed on a separate sheet of paper, and their intended location should be noted on the galley proof. It is the responsibility of the submitting author to ascertain that all co-authors agree with the corrections before the proofs are returned.

Upon receipt of the galley proofs, the corresponding author will be advised of a deadline for return of the completed page proofs and accompanying documentation; this deadline is non-negotiable, and the publication of the manuscript may be delayed or refused if the page proofs are not returned in a timely manner. Galley proofs and documentation may be returned by fax with the understanding that all originals **MUST** be sent to the IMPI office as soon as possible. No paper will be published or assigned to a specific issue until the proofs have been returned.

VI. ASSEMBLY/PREPARATION OF MANUSCRIPTS

Manuscripts should be written in clear, concise English and should be condensed to the utmost compatible with clarity. Editors, reviewers and readers may tend to be biased against results reported in complex or excessively verbose language. The following elements must be assembled for submission:

Text Preparation:

All text (including the title page, abstract, all sections of the body of the paper, figure captions, scheme or chart titles, endnotes and references) and tabular material should be in one file.

Units.

For JMPEE, the units of measure must be consistent with the international scientific community, favoring MKS units to CGS, and strongly discouraging the less rational units of measure.

Page Specifications:

- Side margins: not less than 2.5 cm. Top and bottom margins: not less than 3 cm
- Use 22 x 28 cm (8.5 x 11 in.) or A4 paper size
- Double space throughout

- Print on one side of paper only
- Number all pages of a manuscript consecutively, including the title page, tables, references, etc.

Text Specifications

- Use 10-point or 12-point Times or Symbol (when appropriate) fonts ONLY.
- **Do NOT use graphic representations** of special characters (e.g., Greek characters, math symbols, etc.) in the body of the text when the characters can be entered using the Symbol font or other character rendering.
- Automatic end-of-line hyphenation should be turned off.
- Ensure that all characters are correctly represented throughout the manuscript.
- Check the disk with an up-to-date virus protection program before submission.
- Number all equations consecutively using Arabic numerals.
- **Check the final copy carefully for consistent notation and correct spelling!**

MANUSCRIPT FORMAT:

Title:

- A. Title: Provide a brief and informative title to assist in the classification and indexing of the paper. Do not use trade names of drugs or abbreviations. Avoid uninformative titles such as “Studies on ...”.
- B. Byline: List full names of all authors, and list institutional affiliations of all authors below. It is implicit in listing a person as an author that s/he has agreed to co-author the manuscript and is in full agreement with its content. Group all authors with the same affiliations together (i.e., “Author A and Author C are affiliated with X-Co. Author B is affiliated with Y-Co.”). Do not abbreviate or use footnotes to denote affiliations. **The symbol * should be used to indicate the author to whom correspondence should be addressed.**

Abbreviations and Textual Endnotes:

If desired, authors may list all abbreviations used in the paper in tabular format to be placed near the beginning of the paper. Textual endnotes, numbered consecutively, should be brief and kept to a minimum.

Abstract:

An abstract of not more than 250 words should succinctly present the problem and experimental approach and state major findings and conclusions. It should be self-explanatory and suitable for reproduction by abstractive services without rewriting. If a reference must be cited, complete publication data must be given [White, R. H. (1982) JMPEE 21, 4271-4275].

Key Words:

List the key words for the document that an interested party would use to locate your paper if searching through a reference guide.

Introduction:

The introduction should state the purpose of the investigation and its relationship to other work in the field. Extensive reviews of the literature should be avoided unless its purpose is primarily happens to be a review article. In such a case, an editorial agreement would be expected in advance.

Experimental Procedures:

The materials and methods should be described in sufficient detail to enable others to repeat the experiments. Names of products and manufacturers should be included only if alternate sources are deemed unsatisfactory. Novel experimental procedures should be described in detail, but published procedures should merely be referred to by literature citation of both the original and any published modifications. In submitting a manuscript to JMPEE, authors agree to make available to interested academic researchers for their own use any materials reported in their manuscript that are not otherwise obtainable. Such requests should respect the purpose for which an author has prepared the materials being requested in order to avoid conflicts of competition with the originating laboratory. **Whenever hazardous materials or dangerous procedures are utilized, the necessary precautions should be stated.**

Results:

The results should be presented concisely. Tables and figures should be used only if they are essential for the comprehension of the data. The same data should not be presented in more than one figure or in both a figure and a table. As a rule, interpretation of the results should be reserved for the Discussion.

Discussion:

The purpose of the discussion is to interpret the results and to relate them to existing knowledge in the field. In general, observe the utmost brevity consistent with clarity and avoid personal polemics. Information given elsewhere in the manuscript should not be repeated in the Discussion. Exhaustive reviews of the literature should be avoided.

Acknowledgment:

Acknowledgments should include financial support, technical assistance, advice from colleagues, gifts, etc. Prior permission must be obtained from persons whose contribution to the work is acknowledged in the manuscript.

Appendix:

Begin new page following the end of text and proceeding Acknowledgments. An appendix contains necessary background information not included in the text. Its use is optional.

References:

Begin new page following the Acknowledgments. References should clearly identify the original contributor to the work being cited. The accuracy of the references is the responsibility of the author. Papers that are in preparation or have been submitted but not yet accepted should be cited in the text as unpublished experiments or personal communications. The author must obtain written permission to cite unpublished work of others or to use material taken directly from a copyrighted publication.

Tables:

Use tables only when the data cannot be presented clearly otherwise. Tables may be created using a word processor's text mode or table format feature (preferred). If the text mode is used, separate columns with a single tab and use a line feed (return) at the end of each row.

- Tables should be numbered consecutively with Arabic numerals.
- Tables and their footnotes should be single-spaced and presented one per page.
- Provide a brief title for each table and a brief heading for each column.
- Clearly indicate the units of measure. Data should be rounded to the nearest significant figure.
- Explanatory material referring to the whole table is to be included as a footnote (^a). Table footnotes should be identified by superscript letters, in lowercase, italic lettering.

Charts and Schemes:

Begin new page following the Tables. Scanner-ready copy with all components intact should be submitted with the manuscript. Structures may be represented in hand-drawn artwork or as prints produced using a drawing package. Each chart and scheme should be submitted on a separate page.

Figure Legends:

Submit the figure legends separately from the artwork, typed, all on a page together. The legend should include the figure number and a brief description, preferably one or two sentences or descriptive phrases. It should be understandable without reference to the text and should not include new material that is not in the text. Explain all symbols and abbreviations used in the illustrations. Simple symbols such as O, 9 and 4 should be used. The use of error bars on the data points is recommended.

Figures:

Figures should be used only to document experimental results or methods that cannot be adequately described in the text. The same data should not be presented in more than one figure or in a figure and table(s). Simple linear plots that can be easily described in the text should be avoided. The quality of the illustrations printed depends on the quality of the originals provided. Journal pages are produced completely electronically, therefore all figures must be submitted in electronic format in the manner listed below.

- **Each figure is to be saved separately, as a high-resolution TIFF (.tif), GIFF (.gif), EPS or PDF file.**
- **Do NOT insert graphics into body text of the paper.**
- The filename for each graphic should be descriptive of the content, e.g. Fig1 for Figure 1.
- Lettering included in the illustration should be no smaller than 10 points.
- Lines should be no thinner than 0.5 point.
- Lettering and lines should be of uniform density.
- AVOID USING complex textures and shading. To show a pattern, choose a simple cross-hatch design.
- Artwork produced using a high-quality graphics plotter will yield a better result than if produced on a laser or inkjet printer. If the artwork must be prepared on a laser or inkjet printer, use high-quality paper and high resolution.
- All photographs are to be submitted electronically. Do not submit negatives, slides, overhead transparencies or figures cut from another publication.

Color:

Color photographs and artwork may be printed in the Journal at an additional charge to the author. Please call the Managing Editor to obtain the cost. The additional cost of color reproduction will be billed to the author by the Journal. **Do NOT submit color prints to be printed in black and white – convert these figures to grayscale before submission.**

COPYRIGHT RELEASE

JOURNAL OF MICROWAVE POWER & ELECTROMAGNETIC ENERGY

Paper Title: _____

Authors: _____

I (we) attest that upon publication of the above paper in the Journal of Microwave Power & Electromagnetic Energy, I (we) transfer to the International Microwave Power Institute all rights, titles, and interest to the work, including copyright, together with full right and authority to claim world-wide copyright for the work, as published in this journal. I (we) represent and warrant that I am (we are) the sole author(s) and sole proprietor(s) of all rights in and to any portion of the aforementioned work; that the work is original and not in the public domain; that it has not been previously published; that it does not violate or infringe on any personal or property rights of others, whether common law or statutory; that it contains nothing libelous or contrary to law; and that I (we) have full power to enter into this agreement. I (we) further represent and warrant that the work contains no material(s) from other copyrighted or unpublished works that have been used without the written consent of the copyright owner and/or of the owner of any other rights to or in such other works, and that I (we) will obtain any such written consent as may be required and deliver it to the Institute. As author(s), I (we) retain the right to excerpt (up to 250 words) and reprint the material on request to the International Microwave Power Institute, to make copies of the work for use in classroom teaching or for internal distribution within my (our) place of employment, to use - after publication - all or part of this material in a book I (we) have authored, and/or to present this material orally at any function. I (we) also retain all proprietary rights other than copyright (such as patent rights). I (we) agree that all copies of the article made within these terms will include notice of the copyright of the International Microwave Power Institute. The transfer of rights is made in view of the International Microwave Power Institute's efforts in reviewing, editing and publishing this material.

Page Charges for Publication in JMPEE

Before we begin processing your paper, we wish to advise you of the Journal's policy regarding page charges for published works. Page charges are a necessary part of assuring publication and distribution of special interest journals. They should be viewed by educational institutions and businesses as a standard cost of doing business, and planning for page charges should consider the length of submitted manuscripts, the use of color graphics and illustrations and similar matters.

Page charges for authors who are not members of IMPI are \$90 USD per published page. IMPI members will be charged \$40 USD per published page. Page charges will be assessed only for published works. There is no "submission charge" for unpublished works. With the payment of page charges, 100 reprints of the article will be sent to the contact author. Additional reprints may be ordered at cost plus shipping.

The additional cost of color reproduction for an article will be billed to the author at the *Journal's* cost. Payment for color reproductions must be received prior to publication.

Although page charges are not assessed until final manuscript approval is made, we request your acknowledgment of these pending costs and your agreement to pay upon receipt of an invoice. If your institution or organization is unwilling to pay the mandatory page charge, we will return your submission without processing or review.

Please note the ability to pay page charges does not guarantee your paper will be accepted for publication.

Please acknowledge below your understanding and agreement with the *Journal's* page charge policy.

Response:
