Journal of Orthopaedic Science

Official Journal of the Japanese Orthopaedic Association

Editor-in-Chief: T. Tamaki

ISSN: 0949-2658 (print version)

ISSN: 1436-2023 (electronic version)

Journal no. 776

Springer Tokyo

The *Journal of Orthopaedic Science* welcomes original articles in English that contribute to orthopedic knowledge from all sources in all countries. Manuscripts and all correspondence relating to the editorial management of the journal should be sent to:

Tetsuya Tamaki, MD, PhD, Editor-in-Chief, The Japanese Orthopaedic Association Secretariat Office, 40-8 Hongo 2-chome, Bunkyo-ku, Tokyo 113-8418, Japan  
Phone +81-3-3816-3671 Fax +81-3-3818-2337  
e-mail: takamatsu@joa.or.jp

Articles are accepted only for exclusive publication in the *Journal of Orthopaedic Science*. Published articles, including figures, become the property of the journal.

## Copyright Agreement and Submission Letter

A copyright agreement signed by all authors and containing the following paragraph must accompany each manuscript: "*The undersigned author(s) transfer(s) all copyright ownership of the article entitled [title of article] to the Journal of Orthopaedic Science in the event the work is published. The undersigned author(s) warrant(s) that the article is original, is not under consideration by another journal, and has not been published previously. We sign for and accept responsibility for releasing this material.*"

When submitting a paper, the author(s) must make a full statement to the editor about all submissions and previous reports that might be regarded as prior or duplicate publication of the same or very similar work. Copies of such material should be included with the submitted paper to help the editor decide how to deal with the matter.

## Instructions for Manuscript Preparation

The original manuscript and four duplicates are to be submitted, each complete with figures (five complete sets). Manuscripts should be in English. Authors whose native language is not English should seek the assistance of a colleague who is a native English speaker and familiar with the field of the work. Manuscripts must be typed double-spaced (not 1.5) with wide margins on A4 paper. The manuscript parts should be in the following order, with each section beginning on a new page: title page, abstract, text, acknowledgments, references, tables, figure legends, and figures. Number all pages in the bottom right corner beginning with the title page. For reports on randomized control studies, authors should refer to the CONSORT statement ([www.consort-statement.org](http://www.consort-statement.org)). In order to allow a complete blinded peer review, the *Journal of Orthopaedic Science* requests that authors not include in the abstract or text the name or initials of the authors or the institution at which the study was performed. Standard abbreviations and SI units should be used. Define abbreviations at first appearance in the text, figure legends, and tables, and avoid their use in the title and abstract. Use generic names of drugs and chemicals. Manuscripts of accepted articles will not be returned.

**Title Page:** The title should be concise but sufficiently informative to make electronic retrieval of the manuscript both effective and specific. Include important information such as the study design, i.e., clinical or basic, and in particular indicate if the study is a randomized control trial. The page should contain the article title, the full names of the authors, and the complete postal address of the department and institution where the work was done. A running title not exceeding 35 letters and spaces should be provided. Designate one author as a correspondent and supply his or her complete postal address, telephone number, fax number, and e-mail address. If the name or address for offprint requests is different, this should be stated. Every person listed as an author should have materially participated in the

design, execution, and analysis of the study and should verify the accuracy of the entire manuscript before its submission. Lesser contributors may be noted in an acknowledgment section at the end of the manuscript.

**Abstract:** The abstract should be structured and contain no more than 300 words. Please bear in mind that the abstract and the title form the substantively informative portion of the article for purposes of indexing on electronic databases. The structured abstract should consist of four paragraphs: Background (including a clear description of the primary interest, purpose and context of the research), Methods, Results and Conclusions. The abstract should be typed on a separate page, and should not include abbreviations, footnotes, statistical significance values, or references. No abstract is needed for a case report.

**Text:** The length of the text and references should not exceed 15 pages of double-spaced type. The number of figures and tables together should not exceed 20. The text of the article is usually, but not necessarily, divided into sections with the headings Introduction, Materials and Methods, Results, and Discussion. Long articles may need section subheadings to clarify their content. Do not repeat in the text all data that appear in the tables or illustrations; emphasize or summarize only important observations. A conclusion may be included in the summary paragraph of the Discussion only if it is not redundant.

**Ethics:** It is the responsibility of the authors to assure that all clinical investigations detailed in manuscripts submitted to the *Journal of Orthopaedic Science* are conducted in accordance with the World Medical Association *Declaration of Helsinki* ([www.wma.net/e/policy/17-c\\_e.html-2k](http://www.wma.net/e/policy/17-c_e.html-2k)). All case reports must include a statement indicating that informed consent has been obtained from the patient or appropriate persons for publication, including any necessary photographs. An example of such a statement would be "The patients and/or their families were informed that data from the case would be submitted for publication, and gave their consent." Do not use patients' names, initials, institutional ID numbers or other identifying information. Articles originating from a particular institution are assumed to be submitted with the approval of the requisite authority. Articles describing research involving human subjects must include a statement in the Materials and Methods section indicating that approval was given by the institutional review board and that informed consent was obtained from each patient or candidate. Manuscripts reporting animal experiments must include a statement in the Materials and Methods section indicating that approval was obtained from the institutional review board (IRB) and that animal care complied with the guidelines of the authors' institution or any national law on the care and use of laboratory animals. If the submitted manuscript describes original nucleotide sequence data, these data should be submitted to GenBank ([www.ncbi.nlm.nih.gov/Genbank/-26k](http://www.ncbi.nlm.nih.gov/Genbank/-26k)) by the authors, and the accession number should be included in the submitted manuscript.

**Statistics:** Statistical methods should be described with sufficient detail to enable a knowledgeable reader with access to the original data to verify the reported results. When possible, quantify findings and present them with appropriate indicators of measurement error or uncertainty (such as confidence intervals).

**References:** Authors are responsible for verifying the accuracy and completeness of the references. The number of references should not exceed 30. List the first six authors of each reference, followed by "et al". The style of the reference should follow the samples listed below:

#### Journal articles

Kaminemi S, ElAttrache NS, O'Driscoll SW, Ahmed C, Hirohara H, Neale PG, et al. Medical collateral ligament strain with partial posteromedial olecranon resection. A biomechanical study. *J Bone Joint Surg Am* 2004;86:2424–30.

#### Journal article not in English

Otani T, Hayashi S, Ueno Y, Hayashi H, Kato T, Tamegai H, et al. Long-term radiographic evaluation of muscle release operation for arthritis of the hip: Comparison study between the results of muscle release and the natural history of osteoarthritis. *Rinshou Seikeigeka (Clinical Orthopaedic Surgery)* 2004;39:921–6 (in Japanese).

#### Chapter in a book

Maquet P. Osteotomies of the proximal femur. In: Reynolds D, Freeman M, editors. *Osteoarthritis in the young adult hip*. Edinburgh: Churchill Livingstone; 1989. p. 63–81.

#### Book

Ganong WF. *Review of medical physiology*. 6th ed. Tokyo: Lange Medical Publications; 1973. p. 18–31.

The list of references should be numbered according to the sequence of citation in the text. References should be cited in the text by superscript numbers only. Abbreviations of journal names must conform to those used in PubMed/Index Medicus ([www.ncbi.nlm.nih.gov](http://www.ncbi.nlm.nih.gov)).

With the manuscript, attach a copy of the first and last pages of each journal article cited or the front page of each book cited so that the accuracy of the reference data can be double-checked. Avoid using abstracts as references. In the references, do not list personal communications and unpublished material (including oral and poster presentations and manuscripts not yet accepted for publication). If critical to the manuscript's message, written personal communications and other unpublished material may be cited in the text and referenced in parentheses. Include with the submitted manuscript signed verification from the originator of any personal communication.

**Tables:** Tables should be given a brief, informative title and numbered consecutively in the order of their citation in the text. Type each table double-spaced on a separate page. Tables must be no larger than a single sheet of A4 paper. The table number and title should appear above the table, and the definition of all abbreviations, levels of statistical significance, and additional information should appear below the table.

**Figures and Legends:** Five complete sets of illustrations (glossy black-and-white prints) not mounted on paper should be submitted in five separate envelopes. Figures should be cited consecutively in the text. Include an internal scale in any micrographs or provide the magnification in the legend. Professionally produced arrows should be used to highlight the photograph's message and the illustration should be of a professional standard. Photos and illustrations should be card size (approx. 74 × 113mm) or cabinet size (approx. 106 × 160mm). The height and thickness of letters and numbers in illustrations must be such that they are legible when the figures are reduced. Line art should be submitted with no gradation of shading, as this does not reproduce well. Use cross-hatching or patterns where differentiation is necessary. The figure number, the name of the first author, and an arrow indicating the top of the figure should be written lightly with a soft pencil on the back of each print. Color illustrations may be printed by special arrangement with the publisher, and authors must meet the cost for publication of color illustrations. If photographs of persons are used, either the subjects must not be identifiable or the subject's or guardian's written permission to use the photograph must accompany the manuscript. When submitting a figure that has appeared elsewhere, give full information about previous publication and the

credits to be included, and submit the written permission of the author and the publisher. The previously published source should also be included in the list of references.

**Figure legends:** Figure legends (not exceeding 40 words) should be typed double-spaced on a separate sheet. Do not use a separate page for each legend. All abbreviations should be defined at first use, even if already defined in the text. All characters and symbols appearing in the figure should also be defined.

**Conflict-of-Interest Policy:** All authors are expected to disclose any commercial affiliations as well as consultancies, stock ownership, or patent-licensing arrangements that could be considered to pose a conflict of interest regarding the submitted article. A conflict-of-interest statement will be forwarded to the corresponding author for signature upon acceptance of the manuscript. The signature of all authors is required. No article will be published until return of the completed form to the journal office.

**Revised Manuscripts:** Revised manuscripts must be submitted in quintuplicate and accompanied by a cover letter that addresses all the reviewers' observations. The letter should detail point by point the changes that have been made and should give reasons for any changes that have not been made. In the revised manuscript, corrected or supplemented words and sentences should be clearly underlined.

#### Special Features

**Rapid Short Communications:** Concise articles of a very notable and original nature may be submitted as Rapid Short Communications. The length of the text, acknowledgments, and references should not exceed six double-spaced pages (two printed pages). An abstract is not required. One figure and/or a table may be included in this type of article. The criterion for acceptance is rigid; if extensive revision is required, the submission will lose its rapid communication status.

**Case Reports:** Case Reports will be considered for publication if they contribute to an understanding of the diagnosis, treatment, and/or pathogenesis of diseases related to orthopedic surgery. Manuscripts should include the headings Introduction, Report of the case, and Discussion. Do not forget to clearly indicate that consent for publication has been obtained from the patient or his/her nearest relative.

**Review Articles:** Although these are commissioned, authors are invited to discuss directly with the Editor possible topics for review.

**Letters to the Editor:** Letters to the Editor of sufficient interest will be considered for publication. Letters should be typed double-spaced and limited to 1000 words. Letters related to previously published articles are welcomed, and in such cases a copy of the letter will be sent to the previous article's author(s) to invite a response.

**Proofreading, Color Charges, and Offprints:** Proofreading of the page proofs is to be done by the authors. There are no printing charges. Color illustrations will be accepted; however, the author will be charged the additional cost (¥110,000 for the first page and ¥60,000 for each additional page). Offprints of each article are available in lots of 50. An offprint order form is sent to the author along with the page proofs. Offprints should be ordered prior to publication.

**Editorial Policies:** Statements and opinions expressed in articles and communications are those of the authors and not necessarily those of the editor or the publisher. The editor and publisher disclaim any responsibility or liability for such material.

**Japanese authors** should also refer to the Instructions to Authors in the latest issue of *Nippon Seikeigekagakkai Zasshi* (The Journal of the Japanese Orthopaedic Association) and are requested to include abstract pages in Japanese.
