

# NOTES FOR AUTHORS

**Materials at High Temperatures** welcomes contributions relating to high temperature applications in the power, chemical, engine, processing, and furnace industries. The effects of high temperatures on corrosion, fatigue, creep, strength and wear in composites, alloys, ceramics, inter-metallics and refractories are covered. The journal has a policy of emphasizing practical aspects and authors presenting results from research programmes are encouraged to relate these, if possible, to actual or potential applications. The needs of designers and engineers that could be met by future research work are also highlighted. The following categories of contributions may guide authors:

- Original papers on research and development work and engineering applications (3000–6000 words)
- Research Reports, describing continuing work in a particular area of interest, or the development of new equipment or techniques (1500–2500 words)
- Review articles on particular topics (usually planned in conjunction with the Editor)
- Letters to the Editor containing informal advance reports of research work, or comments on previously published material.

Authors wishing to make contributions should send them to Prof. J.R. Nicholls, Dr Ian G. Wright, Prof. T. Suzuki or Dr R. P. Skelton at the addresses given. Only papers not previously published will ordinarily be accepted. If any tables or illustrations have been published elsewhere the necessary permission to reproduce them should be obtained.

No page charges are levied.

**John R. Nicholls**  
Cottslow House,  
The Green,  
Great Horwood,  
Bucks MK17 0RH, UK

**R. P. Skelton**  
Department of Mechanical Engineering,  
Imperial College,  
Exhibition Road,  
London SW7 2BX

**Ian G. Wright**  
Materials and Ceramic Division,  
Oak Ridge National Laboratory,  
PO Box 2008 – Bldg. 4500S,  
TN 37831-6156, USA

**Tomoo Suzuki**  
Department of Materials Science,  
Hokkaido University,  
n-13 W-8 Kita-ku, Sapporo,  
Japan

## Refereeing

All contributions are reviewed by one or more referees before publication and may thus require amendment before final acceptance.

## Scripts

Two copies should be submitted, typed on one side of A4 paper only, in double spacing and with wide margins and accompanied by a computer disk. All major word processing programs are accepted. Each table should be typed on a separate page. Figure captions and table headings should be as clear and informative as possible. An abstract of about

50–150 words should accompany each typescript. Scripts should be in English.

## Units, symbols and abbreviations

SI units must be used. Symbols should conform to ISO 1000 (BS 5555). Unless a typewriter for typing mathematical symbols is available, these should be identified, the first time used, by their name in words. The same symbol should not be used to represent more than one quantity.

## References

References should be indicated through the text by Arabic numerals placed in square brackets. The references themselves should be listed in numerical order at the end of the script on a separate sheet. References should include the authors; title of article, publication, volume number, issue number, year of publication and page number, *eg*

Vosikovsky, O. and Rivard, A. Growth of surface fatigue cracks in steel plate *Int. J. Fatigue* 3(3), 111–115 (1981).

The title of the publication should either be spelt out in full or abbreviated according to ACS recommended style. References to books should indicate the book publisher and the year of publication.

## Illustrations

Authors are asked to use the minimum amount of descriptive matter on graphs and drawings, and to refer to curves, points etc by their symbols, and place descriptive matter in the caption. Scale grids should not be used.

**Photographs.** Black and white glossy photographs (if not available, colour glossy photographs may be acceptable) should, where possible, be supplied unmounted and should be labelled on the back in soft pencil with the author's name and the figure number.

**Figure captions.** Captions should be typed on a separate sheet of paper.

Authors are urged to pack scripts carefully to avoid damage to illustrations and to note that, unless specifically requested, prints and line illustrations will not normally be returned.

## Proofs

Proofs will be sent to authors for checking. Corrections should be restricted to errors since modifications to the text may be charged to the author. The publishers reserve the right to adapt the presentation of an article to conform with house style.

## Copyright

Before publication, authors are requested to assign Copyright to Science Reviews. Authors' traditional rights will not be jeopardized by assigning copyright in this manner as they will retain the right to re-use and a veto over third party publication.

## Offprints

No page charges are made to authors for material published. Authors will be sent 25 run-on offprints free of charge: in the case of co-authored papers it is helpful to know to whom these can be sent. Extra offprints are available to authors at a reduced rate: these must be ordered before publication of the author's material. Additional reprints (minimum quantity 100) can be ordered at any time from the publisher.
