

Critical Reviews in Solid State and Materials Sciences

Instructions to Authors

1. General Instructions. Manuscripts to be considered for publication should be submitted in duplicate to Paul Holloway, Director of MICROFABRITECH[®], Professor of Materials Science, University of Florida, Dept. of Materials Science & Eng., 132 Rhines Hall, Gainesville, Florida 32611-2066; Phone: (352) 846-3330 Fax: (352) 392-4911; E-mail: pholl@mail.mse.ufl.edu

2. Preparation of Manuscripts. Manuscripts must be typed and double spaced. Roman-times is the preferred typeface for print-outs of manuscripts. Copies made by a clearly legible duplication process are preferred. All pages should be numbered consecutively, starting with the title page and including pages containing tables and figure legends. References, tables, figure legends, and furnished art should be grouped together at the end of the manuscript to facilitate processing.

Authors should write in clear, concise English. The responsibility for all aspects of manuscript preparation rests with the authors. Extensive changes for rewriting of the manuscript will not be undertaken by the Editor.

All manuscripts should be accompanied by an abstract not to exceed 200 words as well as a list of key (indexing) terms should be included. Three to six key words or terms not in the title will assist indexers in cross indexing your article.

In order to ensure timely publication of your article, please submit your manuscript in electronic format. We can accept 3 1/2" diskettes in a variety of word processing programs (e.g., MS Word, WordPerfect, etc.) on DOS, MS Windows, or Macintosh platforms. Make sure the diskette is clearly labeled with the platform and word processing program.

3. References, Abbreviations. References to the literature and all notes regardless of their nature (except those in tables) should be numbered in one consecutive series, repetition of references being avoided by using the superscript number corresponding to the original reference. Reference numbers in the text should be typed as superscripts. Bibliographic references to classified documents and reports or to unpublished material not generally available to the scientific public should not be used. Literature references should be arranged and punctuated as follows:

1. **Jackson, H.**, The sacral arcuate lines in upper sacral fractures, *Radiology*, 145, 35, 1982.

References to books should include author, title, volume, publisher, date of publication, and relevant page ranges. Thus:

2. **Rockwood, C. A., Jr., Wilkins, K. E., and King, R. E.**, Eds., *Fractures in Children*, Vol. 3, J. B. Lippincott, Philadelphia, 1975.

3. **Haughton, V. M. and Williams, A. L.**, Intervertebral discs, in *Computed Tomography of the Spine*, Haughton, V. M. and Williams, A. L., Eds., C. V. Mosby Co., St. Louis, 1982, 122.

Italic or boldface type should be clearly indicated, and Greek or unusual characters should be written plainly or explained by annotations. Simple fractional expressions should be written with a slant line rather than in the usual manner, so that only a single line of type is required.

4. Tables. Tables should be used only when they can present information more effectively than running text. Care should be taken to avoid any arrangement which unduly increases the depth of a table, and the column heads should be made as brief as possible, using abbreviations liberally. Lines of data should not be numbered nor run numbers given unless those numbers are needed for reference in the text. Columns should not be used to contain only one or two entries, nor should the same entry be repeated numerous times consecutively. Tables should be grouped at the end of the manuscript on separate sheets.

5. Illustrations. Figures should be professionally prepared line drawings (laser-printed is acceptable) or camera ready micrographs or halftones. Symbols (open or closed circles, triangles, squares) and lettering (typewriter labeling is not acceptable) should be compatibly sized for optimum reproduction. Figures should be numbered in series and all captions should be typed double spaced on a separate sheet. Both figures and captions should be grouped at the end of the manuscript.

It is the responsibility of the author to obtain permission to use previously published material. Permission must be obtained from the original copyright owner, which in most cases is the publisher.

Color reproduction in figures is possible provided the author bear all incremental charges. An estimate of these charges will be given upon request. A letter acknowledging the author's willingness to defray the cost of color reproduction should accompany the revised manuscript.

6. Formulas and Equations. Empirical and structural formulas and mathematical and chemical equations should be arranged to fill adequately the width of a single or double column. Subscripts and especially superscripts should be written with care and exponents should be set up in a single line. All signs such as + - = < > should be spaced, but the components of mathematical products should not be spaced. Organic structural formulas should be submitted as copy suitable for direct photographic reproduction. Do not use structures when a simple formula will suffice. Do not use multiple lines unnecessarily. It is important in avoiding errors that all formula matter be carefully arranged and executed (preferably typewritten) with special attention to correctness of symbols, location of subscripts, superscripts, and electric charges, and the placing and close join-up of single and multiple bond lines. Use a copy of the structure in the text at the point of proper citation, but when originals are provided, group these at the end of the manuscript. All furnished art must be complete. Compound numbers and other material to appear in the copy should be lettered, not typewritten. This material will not be added to original art.

7. Reprints. Forms and instructions for ordering reprints will be sent before journal is published.
