

Critical Reviews in Biochemistry and Molecular Biology

Instructions to Authors

1. General Instructions for Initial Submission. Manuscripts are scheduled by invitation of the editorial board. On or before the agreed upon due date, manuscripts should be prepared as PDF files, and submitted as an email attachment to: crbmb@biochem.wisc.edu. Note that the due dates are critical for the maintenance of publication schedules. Instructions for the preparation of PDF files are given below.

2. Preparation of Manuscripts. Manuscripts must be typewritten and double-spaced. Roman-times is the preferred typeface for printouts of manuscripts. All pages should be numbered consecutively, starting with the title page and including pages containing tables and figure legends. References, tables, figure legends, and furnished art should be grouped together at the end of the manuscript to facilitate processing.

Authors should write in clear, concise English. The responsibility for all aspects of manuscript preparation rests with the authors. Extensive changes for rewriting of the manuscript will not be undertaken by the Editor.

The title page should include the title, author, author affiliations, and contact information for the corresponding author, and three to six key terms not in the title. The key words will assist indexers in cross indexing your article.

All manuscripts should be accompanied by an abstract not to exceed 200 words as well as a list of key (indexing) terms.

The body of the manuscript should be followed by the References, the Tables, the Table legends, and the Figure legends. If an acknowledgement is included, it should be incorporated into the text immediately before the reference list.

3. Reference, Abbreviations. Please note that the CRBMB citation style has changed. Manuscripts submitted in another format may be returned to the author(s) for reformatting. References in the text should list the author's last name and the year in parentheses, in the form (Doe, 2003) . In the case of two authors, the citation should give both authors' last names, separated by "and", followed by the year (Doe and Jones, 2003). In case of more than two authors, *et al.*, should be used following the first author's name, again followed by the year (Doe, *et al.*, 2003). In the reference list, references should be alphabetized. References should be arranged and punctuated as follows:

Aksoy, M., Erdem S., and Dincol, G. 1976. Types of leukemia in chronic benzene poisoning. *Acta Haematol.* **55**: 66-75.

Macaluso, P. 1969. Hydrogen sulfide. In: *Encyclopedia of Chemical Technology*. pp. 199-201. Mark, H. F., McKetta, I. J., and Othinar D. J., Eds., John Wiley, New York.

Zar, J. H. 1984. *Biostatistical Analysis*. Prentice-Hall, Englewood Cliffs. N.J.

If there are more than 10 authors, list the first 10, followed by a comma and *et al.* Italic or boldface type should be clearly indicated, and Greek or unusual characters should be written plainly or explained by annotations. Simple fractional expressions should be written with a slant line rather than in the usual manner, so that only a single line of type is required.

4. Tables. Tables should be used only when they can present information more efficiently than running text. Care should be taken to avoid any arrangement that unduly increases the depth of a table, and the column heads should be made as brief as possible, using abbreviations liberally. Lines of data should not be numbered nor run numbers given unless those numbers are needed for reference in the text. Columns should not be used to contain only one or two entries, nor should the same entry be repeated numerous times consecutively. Tables should be grouped at the end of the manuscript on separate sheets.

5. Figures and Graphs. Prepare graphics at publication quality resolution, using applications capable of generating high resolution TIFF or EPS files. Figures should be numbered in series.

It is the responsibility of the author to obtain permission to use previously published material. Permission must be obtained from the original copyright owner, which in most cases is the publisher.

Color figures may be incorporated into the online version of the paper for no extra charge. Color reproduction in print figures is also possible provided the author bear all incremental charges. An estimate of these charges will be given upon request. The corresponding author should acknowledge his/her willingness to defray the cost of color reproduction in the email accompanying the initial manuscript submission.

6. Formulas and Equations. Empirical and structural formulas and mathematical and chemical equations should be arranged to fill adequately the width of a single or double column. Subscripts and especially superscripts should be written with care and exponents should be set up in a single line. All signs such as + - = < > should be spaced, but the components of mathematical products should not be spaced. Organic structural formulas should be submitted as copy suitable for direct photographic reproduction. Do not use structures when a simple formula matter can be carefully arranged and executed (preferably typewritten) with special attention to corrections of symbols, location of subscripts, superscripts, and electric charges, and the placing and close-up of single and multiple bond lines. All furnished art must be complete. Compound numbers and other material to appear in the copy should be included in the original art.

7. Instructions for preparing the PDF file and email submission:

Step 1. Prepare the text in Microsoft Word 6.0 or a later version.

Step 2. Prepare graphics at publication quality resolution, using applications capable of generating high resolution TIFF or EPS files. Number each figure. It will be necessary to submit your final manuscript graphics in one of these formats if it is accepted. A website, <http://cpc.cadmus.com/da/guidelines.asp>, has very useful information on the preparation of graphics in TIFF or EPS formats.

Step 3. Using Adobe Acrobat, save your manuscript text and graphics in a single file in PDF format.

Step 4. After converting your manuscript text and figures to a single PDF file, carefully review a printed copy. Check file size (about 1-2 MB is ideal, but should not exceed 6 MB). If the file size exceeds 6 MB, please contact Carol Pfeffer at crbmb@biochem.wisc.edu.

Step 5. Submit the completed PDF file as an email attachment, and send it to crbmb@biochem.wisc.edu

In the coverletter (the email itself), please include:

- Contact information for the Submitting Author
- Information about the authors and the manuscript
- Your willingness to assume the charges for color figures in the print journal, if applicable
- Any other information you wish to convey to the editorial board

8. Reprints. Forms and instructions for ordering reprints will be included with the galley proofs sent to the authors.
