International Microbiology

Official Journal of the Spanish Society for Microbiology

Editor-in-Chief: R. Guerrero

ISSN: 1139-6709 (print version)

ISSN: 1618-1905 (electronic version)

Journal no. 10123

Springer Berlin Heidelberg

## 1 General Information

The journal publishes two kinds of papers: Articles and Complements. Articles are original research papers or critical reviews on a specific topic. They should not exceed 12 printed pages, including tables and figures. Complements are short papers dealing with microbiological subjects of broad interest: Editorials, Perspectives, Opinions, etc.

Manuscripts should be submitted in triplicate to the Editorial Office:

Editorial Office, International Microbiology,  
Apartado 16009, E-08080 Barcelona, Spain,  
Tel: +34-934482373, Fax: +34-933341079  
E-mail: int.microbiol@telefonica.net  
http://www.IM.microbios.org

■ **Manuscripts in electronic form.** Authors are to send the final version of their manuscript – after acceptance for publication – in electronic form. Please follow the special technical instructions as printed in this journal.

**Manuscripts must be accompanied by the Copyright Transfer Statement (the form is regularly published in this journal).**

■ Manuscripts should be submitted in final form. They should be prepared in accordance with the journal's accepted practice, form and content; manuscripts should be checked carefully to exclude the need for corrections in proof. Manuscripts should be typed double-spaced throughout on one side of the paper only and with wide margins. The author should mark in the margin where figures and tables are to be inserted.

## 2 Arrangement of Research articles

All pages must be numbered consecutively, starting with the title page.

■ The **title page** should comprise: title of paper, first name(s) and surname(s) of author(s), location(s), the address to which proofs are to be sent, and the fax number and e-mail address of the corresponding author.

■ The **Abstract** should be informative and completely self-explanatory, briefly present the topic, state the scope of the experiments, indicate significant data, and point out major findings and conclusions. Abstracts are used by information retrieval systems. The abstract should not exceed 200 words. Standard nomenclature should be used and abbreviations should be avoided. No literature should be cited.

Immediately following the Abstract, up to five Keywords should be supplied; these will be used for indexing purposes.

■ The **Introduction** should be concise and define the scope of the work in relation to other work done in the same field. It should not give an exhaustive review of the literature.

■ **Materials and methods** should give sufficient detail to allow the experiments to be reproduced. However, only truly new procedures should be described in detail; previously published procedures should be cited, and important modifications

## Instructions for authors

of published procedures should be mentioned briefly. Subheadings should be used.

■ **Results** should be presented with clarity and precision. The results should be written in the past tense when describing findings in the author's experiments. Previously published findings should be written in the present tense. Results should be explained, but largely without referring to the literature.

■ The **Discussion** should be confined to interpretation of the results (without repetition), also in light of the pertinent literature on the subject.

When appropriate, the Results and Discussion sections can be combined.

■ **Acknowledgements** should be presented after the Discussion section. Personal acknowledgements should only be made with the permission of the person(s) named.

■ **References.** The list of references should include only works that are cited in the text and that have been published or accepted for publication. Unpublished work in preparation, Ph.D. and Masters theses, etc., should be mentioned in the text only, in parentheses. Citations in the text should be by numbers in square brackets referring to an alphabetized list at the end of the paper. References should be in the following style:

1. Carr NG, Mann NH (1994) The oceanic cyanobacterial picoplankton. In: Bryant DA (ed) *The molecular biology of cyanobacteria*. Kluwer, Dordrecht, pp 27–48
2. Madigan MT, Martinko JM, Parker J (1997) *Brock biology of microorganisms*. Prentice Hall, Upper Saddle River
3. Margulis L, Jorgensen JZ, Dolan S, Kolchinsky R, Rainey FA, Lo S-C (1998) The *Arthromitus* stage of *Bacillus cereus*: intestinal symbionts of animals. *Proc Natl Acad Sci USA* 95: 1236–1241

Citation of articles that have appeared in electronic journals is allowed if access to them is unlimited and their URL is supplied.

## 3 Further information

■ **Abbreviations and units.** Abbreviations and symbols should follow the recommendations of the IUPAC-IUB Commission. Information can be obtained at <http://www.chem.qmw.ac.uk/iupac/>. Common abbreviations such as cDNA, NADH and PCR need not be defined. Non-standard abbreviation should be defined at first mention in the Abstract and again in the main body of the text and used consistently thereafter. SI units should be used throughout.

■ **Nomenclature of organisms.** Genus and species names must be in italics. Each genus should be written out in full in the title and at first mention in the text. Thereafter, the genus may be abbreviated, provided there is no danger of confusion with other genera discussed in the paper. Spelling should follow the instructions to authors of the *International Journal of Systematic and Evolutionary Microbiology*. Nomenclature of protists

should follow the *Handbook of Protozoa* (Jones and Bartlett, Boston).

■ **Figures and tables.** These should be restricted to the minimum needed to clarify the text; a total number (F + T) of five is recommended. The quality of photographic prints should be such that good reproduction is ensured. On the back of each figure, the first author's name, the figure number and the top should be marked lightly in soft pencil. Legends must be typed in double-line spacing on a separate sheet and appended to the text. The size of photographs should not exceed the printing area (17.6 × 23.6 cm). For color illustrations the authors will be expected to make a contribution towards the extra costs of € 485.00, US \$ 534.00 plus 16% VAT per article. Color pictures may be accepted for use on the cover of the issue in which the paper will appear.

Tables must be numbered consecutively with arabic numerals and submitted separately from the text at the end of the paper. Tables may be edited to permit more compact typesetting. The publisher reserves the right to reduce or enlarge figures and tables.

■ **Editorial charges.** If an accepted manuscript requires particularly heavy editorial work, authors may be requested to pay an editorial charge of Euro 180 per paper to the editorial office. The acceptance of a paper does, however, not depend on the author's ability to pay this charge. If the research was not funded, authors may send the Editor-in-Chief a written request for charges to be waived.

■ **Complements.** These papers serve to express or clarify the author's point of view on a microbiological topic of international relevance or to comment on a recently published article or book. These papers should not exceed 6 printed pages. References may be cited if necessary.

■ **Book reviews.** Reviews of recent books of special interest in the field of both prokaryotic and eukaryotic microbiology, and the history and sociology of microbiology are welcome. Please contact the Editorial Office for details.

■ **Proofs.** Proofreading is the responsibility of the author. Only typesetting errors should be corrected. The corrected page proofs must be returned by the date requested.
