

INSTRUCTIONS FOR AUTHORS

Advances in Skin & Wound Care, a peer-reviewed, multidisciplinary journal, publishes original investigations, scholarly reviews of the literature, reports on innovative treatments, case series, and practical articles for skin and wound care professionals. Published articles are pertinent for all professionals involved in wound management: physicians, podiatrists, physical and occupational therapists, nurses, dietitians, infection control practitioners, pharmacists, biomedical engineers, and administrators of hospitals, long-term-care facilities, and home health agencies.

The journal welcomes submissions of original articles in all areas of skin and wound management. Manuscripts are considered for publication only if the work has not been published and is not under consideration for publication by another periodical. All authors must reveal affiliation with organizations that have a direct or indirect financial interest in the editorial content or products that are discussed in the manuscript. Manuscript submissions must be accompanied by the Copyright Transfer and Duality of Interest Disclosure forms.

Direct all correspondence and questions to:

Advances in Skin & Wound Care

323 Norristown Road

Ambler, PA 19002-2758
Telephone: (215) 628-7789
FAX: (215) 367-2147
E-Mail: barbara.miller@wolterskluwer.com

Review Process

All submitted papers are subject to a blind peer review. The initial review process takes 2 to 3 months. Reviewers' comments will be shared with the authors.

Accepted manuscripts are subject to editorial revisions for clarity, punctuation, grammar, syntax, and conformity to journal style. If substantive revision is necessary, the manuscript will be returned to the authors for rework based on feedback from the Editor-in-Chief and peer reviewers. The corresponding author will receive a copy of the final manuscript for review prior to publication.

Manuscript Submission

All manuscripts must be submitted electronically to www.lwwsubmissions.com

Original Investigation

Original Investigations should be organized as follows:

- **Title Page:** Include the article title, the full name of each author, highest academic degree, and current affiliation, including city and state. Abstract: A structured abstract of no more than 250 words included within the body of the manuscript should contain the following headings: Objective, Design, Setting, Patients (or Participants), Interventions (if any), Main Outcome Measure(s), Main Results, Conclusion. The title page must also include disclosure of conflicts of interest and funding received for this work from any of the following organizations: National Institutes of Health (NIH); Wellcome Trust; Howard Hughes Medical Institute (HHMI); and other(s).
- **Text:** Include an introduction (with a short literature review and statement of problem), methods, results, and discussion (include implications for clinical practice).
- **References:** Authors must use AMA (American Medical Association) style for references. Type the references double spaced, numbering each one consecutively the first time it is cited in the text (do not use the author's name in the text; references must be numbered). Use superscript numbers, placed after the punctuation. List all authors when there are 6 or fewer; for 7 or more, list the first 3 followed by "et al." Authors are responsible for the accuracy of all relevant citations.
- **Book title:** Author(s) (last name and initials, no periods), title (uppercase and lowercase, no quotation marks), edition or volume, city and state/province of publication, publisher, and year. When particular pages are relevant or when the text is referenced several times, list the relevant pages. Example: Lemeshow S, Hosmer DW, Klar J, Lwanga SK. Adequacy of Sample Size in Health Studies. Chichester,

England: John Wiley & Sons Ltd., 1990.

- **Chapter in a book:** Follow the directions for book title, but add chapter title and editors. Example: Brandeis G, Powell J, Bergstrom M. Resident assessment protocol: pressure ulcers. In: Morris JN, Hawes C, Murphey K, et al, editors. Resident Assessment Instrument Training and Resource Guide. Natick, MA: Eliot Press; 1991.
- **Journal articles:** Author(s) (last name and initials, no periods), title of article (lowercase, no quotation marks), abbreviation of the journal as given in the Cumulative Index Medicus, year of publication, volume number, and inclusive pages. If the journal is not paged sequentially throughout the volume, include the issue number in the citation. Example: Allman RM, Laprade CA, Noel LB, et al. Pressure sores among hospitalized patients. *Ann Intern Med* 1986;105:337-42.
- **Publication by an organization:** Follow example format. Example: National Pressure Ulcer Advisory Panel: Statement on Pressure Ulcer Prevention. Buffalo: NPUAP, 1992.
- **Tables:** Put each table on a separate page after the reference list, double spaced; include a title for each one. Number the tables in the order in which they are referred to in the text. Use the Publication Manual of the American Psychological Association, 4th ed. (1994), as a source for the correct format of statistical tests and tables.
- **Illustrations:** Illustrations and photographs (black-and-white or color) must be professional glossy prints or slides; electronic files are acceptable if they are in .tif or .jpg format. Written permission from the patients must accompany the photographs. Model release forms can be supplied if needed. Also, if using previously published material, authors are responsible for obtaining written permission from the publisher before submitting the material. To identify each item of the illustration, type a label and place it on the back of each illustration or photo, identifying it in the order it appears in the text (Figure 1: Cross-section of the foot). Indicate the top of the illustration if it is not apparent. If any items are to be returned, a notice to that effect must be on the label, along with the complete name and mailing address.

Scholarly Review of the Literature

A Scholarly Review of the Literature includes a complete overview of the literature on any topic related to skin and wound care. Reviews generally will be written by experts in the field and will be solicited. However, unsolicited reviews will be considered and will be subject to peer review. The text should not exceed 15 typed pages and it should include a structured abstract of no more than 250 words under the following headings: Objective, Data Sources, Study Selection, Data Extraction, Data Synthesis, Conclusions. For detailed instructions on preparing a structured abstract, contact the editorial office.

Case Series

Case Series offer readers practical information and contain reports of a series of cases that have interesting outcomes of care. A minimum of 6 cases is required for a series. The text should not exceed 1,000 words and 10 references.

Innovations in Practice

Innovations in Practice include new and interesting methods of diagnosis and treatment. Describe the technique in enough detail so that readers can understand the process. The text should not exceed 1,000 words.

Letters to the Editor

Letters to the Editor are encouraged. They must be signed and will be subject to editing. Letters that question, criticize, or respond to a previously published paper will be sent to the author of that paper for a reply. **Advances in Skin & Wound Care** encourages this type of professional exchange. Address all correspondence to the Editor-in-Chief.

Compliance with NIH and Other Research Funding Agency Accessibility Requirements

A number of research funding agencies now require or request authors to submit the post-print (the article after peer review and acceptance but not the final published article) to a repository that is accessible online by all without charge. As a service to our authors, LWW will identify to the National Library of Medicine (NLM) articles that require deposit and will transmit the post-print of an article based on research funded in whole or in part by the National Institutes of Health, Wellcome Trust, Howard Hughes Medical Institute, or other funding agencies to PubMed Central. The revised Copyright Transfer Agreement provides the mechanism.

Conflicts of Interest

Authors must state all possible conflicts of interest in the manuscript, including financial, consultant, institutional and other relationships that might lead to bias or a conflict of interest. If there is no conflict of interest, this should also be explicitly stated as none declared.
