

# CLINICAL AND EXPERIMENTAL MEDICINE

## Instructions to authors

### 1. General

The author(s) transfer(s) the copyright to his/her article to Springer effective if and when the article is accepted for publication. The copyright covers the exclusive and unlimited rights to reproduce and distribute the article in any form of reproduction (printing, electronic media or any other form); it also covers translation rights for all languages and countries. For U.S. authors the copyright is transferred to the extent transferable.

Clinical and Experimental Medicine publishes reports of clinical and experimental work concerned with the following fields: clinical chemistry, hematology, immunology, oncology and virology.

Authors should submit their manuscripts online to facilitate even quicker and more efficient processing. Electronic submission substantially reduces the editorial processing and reviewing times and shortens overall publication times. Please log directly onto the site

<http://www.editorialmanager.com/cem>

and upload your manuscript following the onscreen instructions.

The author(s) must state in a cover letter that the material is not under consideration for publication elsewhere and that it has not already been published elsewhere in any language or form (except for abstracts). The following articles are considered for publication by the Editorial Board.

When submitting your paper, kindly supply the Editor-in-Chief with an electronically prepared manuscript; however, please do not provide any disk to the publisher or the Editor until your manuscript has been reviewed and accepted for publication.

### 2. Open Choice Publication

In addition to the normal publication process (whereby an article is submitted to the journal and access to that article is granted to customers who have purchased a subscription), Springer now provides an alternative publishing option: Springer Open Choice. A Springer Open Choice article receives all the benefits of a regular 'subscription-based' article, but in addition is made available publicly through Springer's online platform SpringerLink. To publish via Springer Open Choice, upon acceptance please visit [www.springeronline.com/openchoice](http://www.springeronline.com/openchoice) to complete the relevant order form and provide the required payment information. Payment must be received in full before publication or articles will be published as regular subscription-model articles. We regret that Springer Open Choice cannot be ordered for published articles.

### 3. Original papers

Full-length papers should normally have a maximum of 12 printed pages, including references, tables, figures and legends. Manuscripts should be submitted in standard grammatical English, using American spelling throughout; this is the responsibility of the author.

### 4. Short communications

This section is reserved for reports with a maximum of four printed pages (approximately 3,500 words), including up to ten references and three illustrations (tables and/or figures). Papers should be marked as "Short communications" immediately above the title on the first page, and should provide results of immediate interest that deserve expedited publication.

### 5. Format and style

Manuscripts must be typed in double-line spacing (1 cm between lines), including references, tables, legends, etc., on one side of the paper only and with 3-cm margins on both sides of the page, plus 2 copies photocopied on both sides to keep postage charges at a minimum. In order to reduce mailing costs, rejected manuscripts will not normally be returned (with the exception of original figures). Manuscripts must be accompanied by the "Copyright Transfer Statement" (the form is also regularly published in the journal).

Pages must be numbered. The manuscript should be organized as follows:

1. Title page: This is the first page and, as such, should include the title of the paper (with no abbreviations); a shortened version for the page heading that does not exceed 70 letters and spaces (running head); the full names of the author(s), including their given names, and the name of the institute(s). If it is a joint publication from several institutes, the affiliation of all authors should be clearly indicated. The name and full postal address of the author to whom the correspondence and proofs are to be sent must be given. Inclusion of a fax, telephone number and e-mail address is desirable to speed up communication.

2. Abstract: A separate page should be provided with an Abstract of not more than 250 words, describing the background, methods, results and the conclusions reached. It must be self-explanatory and intelligible without reference to the text and should contain no abbreviations. Up to five key words suitable for listing in Index Medicus should be provided at the end of the Abstract.

3. Introduction: The Introduction should contain a clear description of the problem under investigation and of the aims of the study and the results, along with a brief survey of the existing literature on the subject.

4. Materials and methods: Sufficient information should be provided to permit duplication of the experimental work. The manufacturer's name and location should also be given for special material and equipment. A paper describing experimental work in man must

indicate that: (a) informed consent has been obtained from the patients, whenever appropriate; (b) the pertinent ethical committee has given its approval and/or the reported investigations have been performed in accordance with the principles of the Declaration of Helsinki. In animal experiments, the Editorial Board will pay particular attention to the ethical aspects. A list of accepted abbreviations that can be used without definition is printed in each issue of the journal. All other abbreviations should be avoided as far as possible; if necessary, they must be defined at first mention. No abbreviations should appear in the title, running head or summary. The statistical methods used must be identified. Any computer software packages used for anything other than widely known standard statistical procedures should be identified by name or acronym and by author or origin. When variability is expressed in terms of the standard error of the mean (SEM) or standard deviation (SD), the number of observations (n) must also be given. Levels of significance should be expressed as more or less than or equal to a given probability (e.g.  $P > 0.01$ ). The terms "significant" and "not significant" must not be used in a statistical sense without providing the level of significance in terms of P.

5. Results: The Results should be stated concisely without comment. The same data should not be presented in both figures and tables. The desired position of figures and tables should be indicated in the margins of the manuscript.

6. Discussion: The Discussion should add to the information being given without repeating what is presented in the Introduction or Results. It should deal with the relationship of the new information given in the Results to the corpus of knowledge in that field and should be pertinent to the data presented.

7. Acknowledgements: These should be as brief as possible. Any grant that requires acknowledgement should be mentioned. The names of funding organizations should be written in full.

8. References: References, typed in double-line spacing, must be limited to publications cited in the text and in the tables and figure legends. As the Vancouver reference style is now being used in this journal, the list should not be alphabetical but in order of first appearance in the text. References are cited in the text as numerals in square brackets on the line.

#### Journal articles

1. Prandota J, Smith IJ, Hillmann BC, Wilson JT (1991) Diuretic effect and disposition of furosemide in cystic fibrosis. *Eur J Clin Pharmacol* 40:333–338

#### Books

2. Doyle DJ (1989) Computer programs in clinical and laboratory medicine. Springer, Berlin Heidelberg New York

#### Multiauthor books

3. Muller H, Zierski J, Dralle D, Kraub D, Mart-Schler E (1988) Pharmacokinetics of intrathecal baclofen. In: Muller H, Zierski J, Penn R (eds) Local spinal therapy of spasticity. Springer, Berlin Heidelberg New York, pp 155–214

Responsibility for the accuracy of the reference list lies entirely with the author(s). For papers cited that are in press, written evidence should be provided that the paper has been accepted and a copy of the typescript/page proof should be provided. Numbered references to personal communications, unpublished data and manuscripts either "in preparation" or "submitted for publication" are unacceptable. If essential, such references may be incorporated in parentheses in the appropriate place in the text.

9. Tables and figures: Tables should be typed on separate sheets with a number and title. All figures should be numbered and accompanied by legends typed on a separate page. The figures and tables must be strictly limited in each paper and not exceed one-fourth of the text (2 to 3 printed pages). Figures will be printed directly from the originals sent by authors. The following guidelines should therefore be strictly observed: (1) the format should not exceed 17.8 cm; only in exceptional cases will figures up to 24 cm wide be accepted, in which case they will be placed horizontally instead of vertically; (2) graphs should be drawn with India ink (point 0.3); (3) numbers and words on illustrations should be in Helvetica light (type size: Didot 12 pt). The photographs should not be mounted and the names of the authors and figure number should be written in pencil on the back with an arrow to indicate the top of the figure. The photographs must be technically perfect and necessary for understanding the text. Legends must be informative and comprehensible without reference to the text. They should be double spaced on a separate sheet. Keys to symbols and the statistical analysis should be included in the legend, not in the figure.

Color illustrations will be accepted; however, the authors will be expected to make a contribution towards the extra costs (€ 620,00 for the first and € 310,00 for each additional page).

## Copyright

Submission of a manuscript implies: that the work described has not been published before (except in form of an abstract or as part of a published lecture, review, or thesis); that it is not under consideration for publication elsewhere; that its publication has been approved by all coauthors, if any, as well as – tacitly or explicitly – by the responsible authorities at the institution where the work has been carried out. Transfer of copyright to the publisher becomes effective if and when the article is accepted for publication. The copyright covers the exclusive right (for U.S. Government employees: to the extent transferable) to reproduce and distribute the article, including reprints, translations, photographic reproductions, microform, electronic form (offline, online) or other reproductions of similar nature.

All articles published in this journal are protected by copyright, which covers the exclusive rights to reproduce and distribute the article (e.g., as offprints), as well as all translation rights. No material published in this journal may be reproduced photographically or stored on microfilm, in electronic data bases, video disks, etc., without first obtaining written permission

## 6. Reviews and editorials

Reviews and editorial papers dealing with subjects of general informative interest are published upon special request by the Editorial Board. However, unsolicited Reviews may be considered for publication. Prospective writers should first consult the Editor-in-Chief.

## 7. Letters to the editor

Letters should preferably, but not exclusively, be critical assessments of papers recently published in *Clinical and Experimental Medicine*. They should not exceed one printed page (1000 words, including references, one table or one figure). At the Editor-in-Chief's discretion, a letter may be sent to the author(s) of the original paper for comment, and both the letter and reply may be published together. Letters should be typed in double-line spacing with a heading and no abbreviations. Two copies should be sent to the Editor-in-Chief. To expedite publication, proofs are not sent to authors unless requested. Proofreading is carried out at the Editorial Office.

## 8. Workshop reports

Workshop or meeting reports may be published in *Clinical and Experimental Medicine* if they do not exceed two printed pages of text. Two copies should be sent to the Editor-in-Chief.

## 9. Revised manuscripts

Two copies of revised manuscripts should be sent to the Editor-in-Chief. A cover letter responding in detail to each point raised by the reviewers or editors must accompany the manuscript. If a manuscript returned to the authors for revision is not received in the Editorial Office within four weeks, it will be treated as a new manuscript. Extensions may be requested from the Editor-in-Chief.

## 10. Proofs

One set of the proofs is sent to the corresponding author. Only typographical errors should be

corrected. Any changes to the text or figures can be charged to the author(s). The corrected proof should be returned immediately to the publisher by express mail.

## 11. Permission

Verbatim material or illustrations taken from other published sources must be accompanied by a written statement from the author(s), and from the publisher holding the copyright, giving permission to *Clinical and Experimental Medicine* to reproduce the borrowed material.

## 12. Manuscripts in electronic form

Submission of electronic data is strongly encouraged. Please consult the Technical Instructions for manuscripts submitted on diskette published regularly in this journal.

## 13. Offprints and free copies

Two complimentary copies of the relevant issue are supplied. Orders for offprints can be placed by returning the order form with the corrected proofs.

## 14. Checklist

1. Letter of submission
2. Copyright transfer statement
3. Three complete copies of manuscript
4. Title page [title of article, full name(s), affiliation of author(s)]
5. Corresponding author (address, telephone and telefax numbers)
6. Abstract (double-spaced)
7. Key words (up to five)
8. Article (double-spaced)
9. References (double-spaced) on a separate sheet
10. Tables (each on a separate sheet)
11. Legends (double-spaced) on a separate sheet
12. Figures (original and two copies), labeled

from the publisher. The use of general descriptive names, trade names, trademarks, etc., in this publication, even if not specifically identified, does not imply that these names are not protected by the relevant laws and regulations.

An author may self-archive an author-created version of his/her article on his/her own website and his/her institution's repository, including his/her final version; however he/she may not use the publisher's PDF version which is posted on [www.springerlink.com](http://www.springerlink.com). Furthermore, the author may only post his/her version provided acknowledgement is given to the original source of publication and a link is inserted to the published article on Springer's website. The link must be accompanied by the following text: "The original publication is available at [www.springerlink.com](http://www.springerlink.com)". Please use the appropriate URL and/or DOI for the article. Articles disseminated via SpringerLink are indexed, abstracted and referenced by many abstracting and information services, bibliographic networks, subscription agencies, library networks, and consortia.

While the advice and information in this journal is believed to be true and accurate at the date of its publication, neither the authors, the editors, nor the publisher can accept any legal

responsibility for any errors or omissions that may be made. The publisher makes no warranty, expressed or implied, with respect to the material contained herein.

Special regulations for photocopies in the USA. Photocopies may be made for personal or in-house use beyond the limitations stipulated under Section 107 or 108 of U.S. Copyright Law, provided a fee is paid. All fees should be paid to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA, stating the ISSN 1591-8890, the volume, and the first and last page numbers of each article copied. The copyright owner's consent does not include copying for general distribution, promotion, new works, or resale. In these cases, specific written permission must first be obtained from the publisher.

The Canada Institute for Scientific and Technical Information (CISTI) provides a comprehensive, world-wide document delivery service for all Springer-Verlag journals. For more information, or to place an order for a copyright-cleared Springer-Verlag document, please contact Client Assistant, Document Delivery, CISTI, Ottawa K1A 0S2, Canada (Tel.: +1-613-9939251; Fax: +1-613-9528243; e-mail: [cisti.docdel@nrc.ca](mailto:cisti.docdel@nrc.ca)).
