

Journal of Obstetrics and Gynaecology

Instructions for Authors

Journal of Obstetrics and Gynaecology considers all manuscripts at the Editors' discretion; the Editors' decision is final.

Journal of Obstetrics and Gynaecology considers all manuscripts on the strict condition that they are the property (copyright) of the submitting author(s), have been submitted only to *Journal of Obstetrics and Gynaecology*, that they have not been published already, nor are they under consideration for publication, nor in press elsewhere. Authors who fail to adhere to this condition will be charged all costs which *Journal of Obstetrics and Gynaecology* incurs, and their papers will not be published. Copyright will be transferred to the *Journal of Obstetrics and Gynaecology* and Informa UK Ltd., if the paper is accepted.

Editorial Policy

The journal will consider original material for publication relevant to the entire field of obstetrics and gynaecology, from laboratory research to clinical reports. All material is subject to peer review by members of the editorial board, and a specialist reviewer where indicated. Articles will be published in the following broad groups: original laboratory or clinical contributions (1500-2500 words), reviews relevant to practice (4000-6000 words), short communications and case reports (maximum 800 words, 1 figure or table and 10 references, at the Editor's discretion), correspondence (maximum 400 words) and book reviews solicited by the journal.

General Guidelines

Please write clearly and concisely, stating your objectives clearly and defining your terms. Your arguments should be substantiated with well reasoned supporting evidence.

In writing your paper, you are encouraged to review articles in the area you are addressing which have been previously published in the Journal, and where you feel appropriate, to reference them. This will enhance context, coherence, and continuity for our readers.

Authors should include telephone and fax numbers as well as e-mail addresses on the cover page of manuscripts.

Articles should be written in UK English. Authors whose native language is not English are requested to have their manuscript checked for linguistic correctness before submission. For a list of resources we recommend for language editing please [click here](#).

Submissions should include, where appropriate, a formal statement that ethical consent for the work to be carried out has been given.

Submission Guidelines

All submissions should be made online at *Journal of Obstetrics and Gynaecology's* ScholarOne Manuscripts site: <http://mc.manuscriptcentral.com/cjog>

New users should first create an account. Once a user is logged onto the site, submissions should be made via the Author Centre. If you are a new author but have previously reviewed for the Journal through the online system, you should use your existing reviewer username and password to log in as an author.

If you experience any problems with your submission or with the site, please contact ScholarOne support through the 'get help now' link.

Ethical Review

The Journal supports the principles of the Declaration of Helsinki, and expect that the authors of papers submitted to the Journal will have obtained ethical consent and followed those legal and regulatory requirements for human experimentation with drugs, including informed consent, according to procedures which apply in their institution and country. The Code of Ethics of the World Medical Association ([Declaration of Helsinki](#)) represents a minimal requirement. Please click on [Ethics and Consent](#) for further information.

Preparation of Manuscripts

Text should be supplied in a format compatible with Microsoft Word for Windows (PC). Charts and tables are considered textual and should also be supplied in a format compatible with Word. All figures (illustrations, diagrams, photographs) should be supplied in JPG or TIFF format. Do not save your files as "text only" or "read only".

Manuscripts should be typed in 12pt font with double spacing and wide margins. References should be given in the Harvard (Author-Year) System (see [References](#) section for examples).

Structure of Manuscripts

In general, manuscripts should be divided into sections with the headings: Title page, Summary, Introduction, Materials and Methods, Results, Discussion, Acknowledgements, Declaration of Interest statement, References, Tables and Figures. Each section should begin on a new sheet and be identified with the shoulder heading. Other sub-section headings within the main headings may be used but should be limited.

Title Page

A title page should be provided comprising the article title plus the full names and affiliations of all authors involved in the preparation of the manuscript. One author should be clearly designated as the corresponding author and full contact information, including phone number and email address, provided for this person. A short running title not exceeding 50 characters (including spaces) and Keywords (up to 6) should also be included on the title page for original articles and reviews. The keywords will assist indexers in cross indexing your article. This page should be at the beginning of the manuscript.

Summary

Original articles and reviews, but not case reports, should be prefaced by a simple summary not exceeding 150 words, typed on a separate page.

Text

This should in general, but not necessarily, be divided into sections with the headings: Introduction, Materials and Methods, Results, Discussion.

Style

It is the policy of the Journal to employ SI units, with the equivalent conventional units in parentheses, though blood pressures may be given in mmHg. Abbreviations for SI units and other terms may be found in: Units, Symbols and Abbreviations: a Guide for Biological and Medical Editors and Authors, 5th edition, London, Royal Society of Medicine, 1994. Statistical analysis must explain the methods used. The use of footnotes is not permitted. Single quotation marks should be used and words to be

italicised should be underlined. The Editor reserves the right to alter manuscripts whenever necessary to make them conform to the stylistic and bibliographic conventions of the journal.

Acknowledgments and Declaration of Interests

Acknowledgments and Declaration of interest sections are different, and each has a specific purpose. The Acknowledgments section details special thanks, personal assistance, and dedications. Contributions from individuals who do not qualify for authorship should also be acknowledged here. Declarations of interest, however, refer to statements of financial support and/or statements of potential conflict of interest. Within this section also belongs disclosure of scientific writing assistance (use of an agency or agency/ freelance writer), grant support and numbers, and statements of employment, if applicable.

Acknowledgments section

Any acknowledgments authors wish to make should be included in a separate headed section at the end of the manuscript preceding any appendices, and before the references section. Please do not incorporate acknowledgments into notes or biographical notes.

Declaration of Interest section

All declarations of interest must be outlined under the subheading "Declaration of interest". If authors have no declarations of interest to report, this must be explicitly stated. The suggested, but not mandatory, wording in such an instance is: *The authors report no declarations of interest*. When submitting a paper via ScholarOne Manuscripts, the "Declaration of interest" field is compulsory (authors must either state the disclosures or report that there are none). If this section is left empty authors will not be able to progress with the submission.

Please note: for NIH/Wellcome-funded papers, the grant number(s) must be included in the Declaration of Interest statement.

References

References should be in Harvard Style. Please ensure that all references cited in the text are included in the reference list and vice versa. In the reference list, each reference should either give names and initials of all the authors or 6 names et al for long articles and 3 names et al for case reports. The reference list should contain only articles that are accessible to most scientists. Unpublished work, including personal communications, manuscripts in preparation and manuscripts submitted but not yet accepted for publication, should be referred to in the text in the following way: (A. Stone, unpublished) (J. Brown, personal communication). Articles that are accepted for publication but are not yet published may be listed as 'in press' in the reference list. Citation in the text should be by author's name and date of publication. References should be cited in chronological order and et al. should be used for more than two authors, for example: (Davies & Smith, 1996; Frost et al., 1997; Williams, 1997). In the reference list, references should be cited in alphabetical order. Papers by the same author should be given in the order (i) single author (ii) two authors alphabetically according to the name of the second author (iii) three or more authors chronologically, with (a) (b) and (c) etc. for papers published in the same year, in the order in which they are cited in the text. References to articles in journals should include authors' names with initials, year of publication, full title of article, journal title given in full, volume number, and first and last page numbers. References should be in the format of the following example:

Gosden RG, Picton HM, Nugent D, Rutherford AJ. 1999. Gonadal tissue cryopreservation: clinical objectives and practical prospects. *Human Fertility* 2: 107-114.

Reference to books should include authors' names, year of publication, chapter title, book title, edition number, page numbers, names of editors, name of publisher and city of publication, for example:

Snowdon R. 1990. The family and artificial reproduction. In: Bromham DR, Dalton ME, Jackson JC, editors, *Philosophical Ethics in Reproductive Medicine*. Manchester. Manchester University Press; pp 70-185.

Tables and Figures

Tables and figures should be referred to in text as follows: Figure 1, Figure 2; Table I, Table II. The place at which a table or figure is to be inserted in the printed text should be indicated clearly on the manuscript. Each table and/or figure must have a legend that explains its purpose without reference to the text. Each table and/or figure must be uploaded separately from the main document. Charts and tables are considered textual and should also be supplied in a format compatible with Microsoft Word.

Tables: should be used only when they can present information more efficiently than running text. Care should be taken to avoid any arrangement that unduly increases the depth of a table, and the column heads should be made as brief as possible, using abbreviations liberally. Tables should be submitted on separate sheets, numbered in Roman numerals, and their position indicated in the text (e.g., Table I). Each table should have a short, self-explanatory title. Vertical rules should not be used to separate columns. Units should appear in parentheses in the column heading but not in the body of the table. Any explanatory notes should be given as a footnote at the bottom of the table.

Figures: All illustrations (including photographs, graphs and diagrams) should be referred to as Figures and their position indicated in the text (e.g., Figure 3). All figures must be numbered in the order in which they appear in the paper. In multi-part figures, each part should be labelled (e.g. figure 1(a), figure 1(b)). The captions of all figures should be submitted on a separate sheet, should include keys to symbols, and should make interpretation possible without reference to the text. Figures should ideally be professionally drawn and designed with the format of the journal in mind and should be capable of reduction. Files should be saved as one of the following formats: TIFF (tagged image file format), JPG, PostScript or EPS (encapsulated PostScript), and should contain all the necessary font information and the source file of the application (e.g. CorelDraw/Mac, CorelDraw/PC).

Colour Figures: Avoid the use of colour and tints for purely aesthetic reasons. Any figure submitted as a colour original will appear in colour in the journal's online edition free of charge and can be downloaded. Paper copy colour reproduction will only be considered on condition that authors contribute to the associated costs. Charges are: US\$1000 per article, a 15% service fee will be applied by Rightslink. (Color costs will be waived for invited articles).

Photomicrographs

If these are to be published, the stain used and the magnification should be specified in the legend. The author must confirm that he has verified that the magnification cited represents the actual magnification, from microscope slide to the photograph supplied.

Supplemental digital content

The space available in the printed journal is restricted and authors are therefore encouraged to be as concise as possible in their writing and to consider having supplementary material for publication only in the online version of the journal. Supplementary material must be important ancillary information that is relevant to the parent article but is not essential in the printed journal.

Supplemental digital content may enhance an article's text and may include text documents, questionnaires, tables, figures, graphics, illustrations, audio and DVD/video material, research protocols and mathematical calculations. Authors reporting results from a questionnaire survey should include a copy of the questionnaire used (original language and/or English translation) together with the manuscript (see supplementary material above), unless the questionnaire is in common use and published before, when a reference will suffice. Do not include supplementary material within the main manuscript file, but upload as separate file(s).

Cite all supplemental digital content consecutively in the text. Citations should be clearly labelled as

“Supplemental Digital Content” on submission. Include a sequential number (S1, S2, S3 etc.) and provide a brief description of the supplemental content. Provide a legend on supplemental digital content at the end of the text. List each legend in the order in which the material is cited in the text. The legends must be numbered to match the citations from the text. Include a title and a brief summary of the content. For audio and video files, also include the author name, videographer, participants, length (minutes), and size (MB).

To ensure quality for those viewing supplemental digital content, the publisher suggests that authors submit supplemental digital files no larger than 10 MB each. Follow these guidelines for formatting files:

- Documents, graphs, and tables may be presented in any format.
- Figures, graphics, and illustrations should be submitted with the following file extensions: .tif, .eps, .ppt, .jpg, .pdf.
- Audio files should be submitted with the following file extensions: .mp3, .wma.
- Video files should be submitted with the following file extensions: .wmv, .mov, .qt, .mpg, .mpeg, .mp4. Video files should also be formatted with a 320 _ 240 pixel minimum screen size.
