

## INSTRUCTIONS TO AUTHORS

**Papers, Reviews and Letters to the Editor** from both domestic and foreign authors dealing with actual fields of theoretical and experimental physics can be submitted for publication to **acta physica slovacica**. Papers and Letters to the Editor should contain original results, not published so far and not considered for publication elsewhere. The authors are requested to attach a letter with clear request for publication of their contribution in **acta physica slovacica**.

**Manuscripts.** Manuscripts should be written in English. We strongly encourage the authors to prepare their papers as "compuscripts", preferably using  $\text{\LaTeX}$  or  $\text{\TeX}$ . Authors without such possibility can anyway submit their manuscripts prepared in a conventional way or using some other program, with understanding that it will introduce additional delays and costs.

Submissions should contain the title, the full name(s), affiliation(s) and address(es) of the author(s), (if possible, an e-mail address of at least one of the authors is desirable), PACS numbers, a short abstract, the text of the paper and the references. The major parts of the paper should appear in the order similar to following: Introduction, Method, Results, Discussion and Conclusions. Subheadings are also acceptable. Letters to the Editor are not divided into sections. Their length is not to exceed 4 printed pages.

*Conventionally prepared manuscripts.* Submit the original manuscript plus one copy. The manuscript, if prepared on a typewriter, should be given in double spacing on one side of the standard A4 (210×297 mm) or letter size ( $8\frac{1}{2} \times 11$  in.). Please, take a great care to write clearly and unambiguously formulae you use and avoid possible confusion of similarly looking symbols and letters.

*Compuscripts.* We accept manuscripts in standard  $\text{\LaTeX}$  prepared using our style (the file is obtainable from <http://www.fu.sav.sk/aps/>) or style "article" free of any author-defined styles and/or macros (or in plain  $\text{\TeX}$ ) by an electronic mail or submitted on a DOS diskette. The standard procedure of submitting figures to the compuscript is to prepare them as an encapsulated postscript (or a standard postscript) file.

We are not able to process routinely and smoothly other possibilities (e.g., Word). However, they can be usually used for refereeing purposes with understanding that we need the  $\text{\LaTeX}$  source in the final stage.

Details about using other possibilities than  $\text{\LaTeX}/\text{\TeX}$  and on using of other figure formats can be found on our Web page and/or the authors can contact directly the Editorial Office.

**PACS numbers.** PACS numbers should be supplied with each manuscript. We recommend to use the latest version (e.g. <http://www.aip.org/pacs/pacs.html> or <http://publish.aps.org/>), but as the year-to-year changes are usually not so significant, we do not insist in using the latest PACS classification.

**Abstract.** The abstract should precede the paper. It should be written with great care. Particular emphasis should be put on a concise description of the subjects studied, new methods used, and new or unusual results and conclusions.

**References.** References within the text should be referred to with consecutive numbers in square brackets. The reference list should be arranged according to the order of citing and it should immediately follow the last page of the text. Authors are requested to use the following forms:

- [1] T. Kawano, M. Nakamura, Y. Watanabe: *Phys. Rev. C* **57** (1998) 978
- [2] S. Pokorski: *Gauge Field Theories*, Cambridge Univ. Press, Cambridge 1990
- [3] A. Faessler: in *Heavy-Ion Phys., Today & Tomorrow, Proc. 7 Adr. Int. Conf. Nucl. Phys., Brioni 1991* (Eds. R. Čaplár, W. Greiner). World Sci., Singapore 1991, p. 225

**Tables.** Refer to all tables in the text but design each table so that it is complete in itself. Care should be given to the headings of the tables. Each heading should include a description of the content of the table. If the manuscript is not sent in  $\text{\TeX}/\text{\LaTeX}$ , the tables have to follow the References and each table should be typed on separate sheet of paper.

**Figures.** Attach the original set of figures (this is not needed for compuscript submissions), drawn in India ink on high-quality paper, contrast black-and-white photographs on glossy paper, or figures produced by a laser printer to your hardcopy submission. Place each figure on a separate sheet not exceeding the A4 or letter size format and number the sheets with a soft pencil. Please, keep in mind the readability of the figures after their reduction; especially, use sufficiently large lettering size.

The authors will be notified on receipt of their manuscript as well as about the results of the refereeing procedure. Normally, the confirmation of receipt is sent within 24 hours (by e-mail, if possible). All submissions (including conferences) are subject to a peer review. The refereeing procedure takes typically 4 to 6 weeks. The referee's comments (and/or that of the Editor or of the Managing Editor) are communicated to the authors by e-mail or using a conventional mail. The final positive decision on the acceptance of the paper is sent exclusively by a conventional mail. The production itself takes typically 2 to 4 months, though some deviations from this scheme may occur when a special conference or topical issue is published meantime.

The article may not be changed in the proof. Authors may be charged for extra corrections due to their negligence in preparing the manuscript.

After the journal is published, the authors will receive 30 free reprints of their contribution. Independently of that, the authors can freely download the final file of their paper exactly in the form which has been used by the printers.

Manuscripts and all correspondence should be sent to: *Managing Editor, Acta Physica Slovaca, Institute of Physics SAS, 84511 Bratislava, Slovakia*, or by e-mail to *aps@savba.sk*. The fax number is (+421-2) 54776085.
