List of Contributors	xiii
Preface	xv

I PLANT CELL: SUBSTRUCTURES AND SUBFUNCTIONS

1 Cell and Subcell

JAMES BONNER

I. Introduction	3
II. The Subcellular Components of the Plant Cell	3
III. The Logic of Cell Life	6
IV. Methods of Cell Fractionation	8
V. Separation of the Golgi Apparatus	13
VI. Cell as a Community	13
General References	14

2 Ribosomes

ERHARD STUTZ

I. Introduction	15
II. Structure of Ribosomes	17
III. The Ribosome Cycle	29
IV. Ribosome Hybrids	30
V. Chloroplast and Mitochondrial Ribosomes	31
References	33

3 The Nucleus

JAMES BONNER

I. Introduction	37
II. Preparative Procedures	38
III. Findings	41
IV. Concluding Remarks	62
References	62

4 Cell Membranes**A. A. BENSON AND ALICE TANG JOKELA**

I. Introduction	65
II. Composition of Cell Membranes	67
III. Structure of Cell Membranes	73
IV. Properties of Specific Cell Membranes	79
General References	87
References	87

5 Microbodies**R. W. BREIDENBACH**

I. Introduction	91
II. General Description and Nomenclature	92
III. Isolation of Microbodies from Plants	95
IV. Distribution of Microbodies	96
V. Functional Roles	98
VI. Biogenesis of Microbodies	107
General References	111
References	111

6 The Chloroplast**RODERIC B. PARK**

I. Introduction	115
II. Physiological Studies of the Photosynthetic Process	116
III. Localization of Light and Dark Reactions within the Chloroplast; Association with Specific Chloroplast Structures	118
IV. The Photosynthetic Unit, Its Physiological and Morphological Expression	135
V. The General Biology of Chloroplasts	138
General References	144
References	144

7 Plant Microtubules**PETER K. HEPLER**

I. Introduction	147
II. Structure of Microtubules	148
III. Composition and Assembly of Microtubules	151
IV. The Spindle Apparatus: Mitosis and Cytokinesis	154
V. The Spindle Pole: Planes of Division	161
VI. Mechanism of Mitosis	168
VII. Cortical Microtubules	173
VIII. Conclusion and Prospect	181
References	182

8 Vacuoles**Ph. MATILE**

I. Introduction	189
II. Biochemistry of Vacuoles	190
III. Functions of Vacuoles	204
IV. Ontogeny of the Vacuome	219
General References	221
References	222

9 The Primary Cell Wall**PETER ALBERSHEIM**

I. Introduction	226
II. The Noncellulosic Structural Components of Primary Cell Walls	227
III. The Connections between the Structural Components of a Primary Cell Wall	246
IV. A Tentative Molecular Structure of the Walls of Suspension-Cultured Sycamore Cells	254
V. The Nonstructural Components of Primary Cell Walls	264
VI. What Does All This Tell Us about the Mechanism of Cell Wall Extension?	266
References	271

II BASIC METABOLISM**10 Regulation of Enzyme Activity in Metabolic Pathways****JACK PREISS AND TSUNE KOSUGE**

I. Introduction	278
II. Modulation of Enzyme Activity by Small Metabolites	279
III. Regulation of Enzyme Activity by Chemical Modification	285
IV. Regulation of "Futile Cycles" between Enzymes Involved in Gluconeogenesis and Glycolysis	288
V. Control of Metabolism by Adenylate Energy Charge	290
VI. Kinetic Properties of Allosteric Enzymes	293
VII. Regulation of Enzymes Involved in Carbon Metabolism during Photosynthesis	300
VIII. Regulation of the Biosynthesis of Starch in Photosynthetic Tissues	304
IX. Regulation in Higher Plant Nonchlorophyllous Tissue	310
X. Regulation of Nitrogen Metabolism	319
XI. Summary	327
General References	327
References	328

11 Mono- and Oligosaccharides**J. E. GANDER**

I. Introduction	337
II. Transformations of Sugar Phosphates	338
III. 1-L- <i>myo</i> -Inositol Metabolism	352
IV. L-Ascorbate Biosynthesis	358
V. Oligosaccharide Biosynthesis	360
VI. Polyols, Monosaccharides, and Oligosaccharides in Lichen	371
VII. Concluding Remarks	372
General References	372
References	373

12 Polysaccharides**T. AKAZAWA**

I. Starch	381
II. Inulin, Mannan, and Other Reserve Polysaccharides	397
General References	399
References	400

13 Cell Wall Biogenesis**ARTHUR L. KARR**

I. Introduction	405
II. Cell Wall Language	407
III. Synthesis of Compounds Used as Substrates for the Formation of Wall Polymers	409
IV. Enzyme Systems Which Catalyze the Synthesis of Cell Wall Polysaccharides	414
V. Intermediates in the Synthesis of Polysaccharides	420
VI. Cytological Location of Polysaccharide Synthesis	421
VII. Synthesis of the Cell Wall Glycoprotein, Extensin	422
VIII. Alterations of Cell Wall Polymers Which Occur Outside the Plasma Membrane	422
IX. Conclusion	423
References	424

14 Lipid Metabolism**P. K. STUMPF**

I. Chemical Composition of Lipids	428
II. Degradation of Fatty Acids	437
III. Biosynthesis of Malonyl-CoA	447
IV. Biosynthesis of Long-Chain Saturated Fatty Acids	448
V. Biosynthesis of Unsaturated Fatty Acids	454
VI. Conclusion: A Discussion of the Interrelationship between Acyl-ACP's and Acyl-CoA's	458
References	460

15 Nucleic Acid Metabolism

JOE L. KEY

I. Introduction	463
II. Enzymology of DNA Replication	464
III. Enzymology of RNA Biosynthesis	468
IV. Characterization and Properties of DNA	477
V. RNA Metabolism	486
References	500

16 Protein Biosynthesis

ABRAHAM MARCUS

I. Introduction	507
II. Transcription	508
III. Translation	508
IV. The Genetic Code and Messenger RNA	509
V. Synthesis of Aminoacyl-tRNA	512
VI. Amino Acid Polymerization	514
VII. Chain Termination	519
VIII. Formation of Completed Proteins	520
IX. Regulation	522
General References	522
References	522

17 Amino Acid Biosynthesis and Its Regulation

J. K. BRYAN

I. Introduction	525
II. Origin and Mobilization of Amino Acid Precursors	527
III. Synthesis of Individual Amino Acids	531
IV. General Conclusions	555
General References	557
References	557

18 Mineral Metabolism

D. W. RAINS

I. Introduction	561
II. Essentiality	562
III. Specific Function of Essential Nutrients	563
IV. Other Nutrients	589
References	592

19 Sulfate Reduction

LLOYD G. WILSON AND ZIVA REUVENY

I. Introduction	599
II. Sulfate Activation	600
III. Assimilatory Sulfate Reduction in Fungi and Bacteria	606
IV. Sulfate Reduction in Algae and Higher Plants	612

	V. Cysteine Biosynthesis	619
	VI. Methionine Biosynthesis	622
	References	630
20	Nitrate Metabolism	
	E. J. HEWITT, D. P. HUCKLESBY, AND B. A. NOTTON	
	I. Introduction	633
	II. Nitrate Reduction	634
	III. Nitrite Reduction	663
	References	672
21	Phytochrome	
	PETER H. QUAIL	
	I. Introduction	683
	II. A Chronology	685
	III. Phytochrome, The Molecule	685
	IV. Biological Display	696
	V. Conclusions	708
	General References	708
	References	709
22	Hormones	
	J. E. VARNER AND DAVID TUAN-HUA HO	
	I. Ethylene	714
	II. Cytokinins	723
	III. Auxins	732
	IV. Absciscic Acid and Related Compounds	739
	V. Gibberellins	750
	General References	764
	References	765
23	Senescence	
	LEONARD BEEVERS	
	I. Introduction	771
	II. Regulation of Senescence	773
	III. Biochemical Changes during Senescence	775
	IV. Reversal of Senescence	790
	V. Conclusions	791
	References	792
III	AUTOTROPHY	
24	Photosynthesis: The Path of Carbon	
	M. D. HATCH	
	I. Introduction	797
	II. Pathways of CO ₂ Fixation	798

III. Regulation of Photosynthesis	829
IV. Photorespiration and the Glycolate Pathway	832
V. Photosynthetic Pathways and Other Characteristics	836
References	839

25 Photosynthesis: The Path of Energy

BESSEL KOK

I. Introduction	846
II. Early Events	849
III. Quantum Capture and Distribution	852
IV. The Photosystems	861
V. Photophosphorylation	870
VI. Energetics and Kinetics	878
References	883

26 Nitrogen Fixation

R. H. BURRIS

I. History	887
II. The Nitrogen Cycle	888
III. Biological Agents That Fix N_2	889
IV. Biochemistry of N_2 Fixation	895
References	907
