## Volume I

|                                                                                                                                                 |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Introduction .....                                                                                                                              | 1   |
| <b>Ladislav Robert and William Hornebeck</b>                                                                                                    |     |
| <b>SECTION A: ELASTIN</b>                                                                                                                       |     |
| <b>I. MORPHOLOGY-ULTRASTRUCTURE</b>                                                                                                             |     |
| Chapter 1                                                                                                                                       |     |
| Use of Pycnogenols in the Histological Staining of Elastic Fibers and Their Quantification in Several Tissues by Automated Image Analysis ..... | 7   |
| <b>Gaston Godeau and Alexandre-Michel Robert</b>                                                                                                |     |
| Chapter 2                                                                                                                                       |     |
| Ultrastructural Properties of Elastin .....                                                                                                     | 21  |
| <b>Anna Kádár</b>                                                                                                                               |     |
| Chapter 3                                                                                                                                       |     |
| The Microfibrillar Component of Elastic Tissue .....                                                                                            | 31  |
| <b>Edward G. Cleary, Mark A. Gibson, and J. C. Fanning</b>                                                                                      |     |
| <b>II. BIOCHEMICAL PROPERTIES OF ELASTIN</b>                                                                                                    |     |
| Chapter 4                                                                                                                                       |     |
| Isolation, Characterization, and Biochemical Properties of Elastin .....                                                                        | 49  |
| <b>Marie Paule Jacob and Ladislav Robert</b>                                                                                                    |     |
| Chapter 5                                                                                                                                       |     |
| Biosynthesis and Regulation: Structure of the Bovine and Human Elastin Genes .....                                                              | 67  |
| <b>Helena Yeh, Norma Ornstein-Goldstein, Zena Indik, and Joe Rosenbloom</b>                                                                     |     |
| Chapter 6                                                                                                                                       |     |
| Regulation of Elastin Gene Expression .....                                                                                                     | 83  |
| <b>Jeffrey M. Davidson</b>                                                                                                                      |     |
| Chapter 7                                                                                                                                       |     |
| Regulation of Elastin Biosynthesis by Vitamins and Hormones .....                                                                               | 91  |
| <b>Carl Franzblau, Peter J. Mogayzel, Jr., Barbara Faris, Leesa M. Barone, and Peter R. Bergethon</b>                                           |     |
| Chapter 8                                                                                                                                       |     |
| Posttranslational Modification of Elastin: Lysine Oxidation and Cross-Linking .....                                                             | 109 |
| <b>Herbert M. Kagan</b>                                                                                                                         |     |
| Chapter 9                                                                                                                                       |     |
| Cross-Linking in Elastin .....                                                                                                                  | 127 |
| <b>S. Miles Partridge</b>                                                                                                                       |     |
| Chapter 10                                                                                                                                      |     |
| Physicochemical Properties of Elastin and Constituent Peptides .....                                                                            | 141 |
| <b>Dan W. Urry</b>                                                                                                                              |     |

|                                                                                                              |     |
|--------------------------------------------------------------------------------------------------------------|-----|
| Chapter 11                                                                                                   |     |
| Elastin Structure as Determined by Solid Phase, Liquid, and GAS Microsequencing...                           | 175 |
| <b>Lawrence B. Sandberg, Russell W. Blacher, Charles T. Leach, Donald Wilder Smith, and Robert B. Rucker</b> |     |
| Chapter 12                                                                                                   |     |
| Immunological Properties of Elastin.....                                                                     | 187 |
| <b>Marie Paule Jacob, Tamás Fülöp, Jr., and Ladislav Robert</b>                                              |     |
| Chapter 13                                                                                                   |     |
| Biological Effects of Elastin Peptides .....                                                                 | 201 |
| <b>Tamás Fülöp, Jr., Marie Paule Jacob, and Ladislav Robert</b>                                              |     |
| III. ELASTIC FIBERS IN CELL-MATRIX INTERACTIONS                                                              |     |
| Chapter 14                                                                                                   |     |
| Influence of Extracellular Matrix on Elastin Biosynthesis .....                                              | 213 |
| <b>William C. Parks and Robert P. Mecham</b>                                                                 |     |
| Chapter 15                                                                                                   |     |
| Glycoproteins Associated with Elastic Tissues and Microfibrils .....                                         | 229 |
| <b>Madeleine Moczar, J. Labat-Robert, and Ladislav Robert</b>                                                |     |
| Chapter 16                                                                                                   |     |
| Characterization of Glycoproteins in Cell Cultures from Elastic Tissues .....                                | 245 |
| <b>Shirley Ayad and Michael E. Grant</b>                                                                     |     |
| Chapter 17                                                                                                   |     |
| Interactions Between Lipids and Elastin.....                                                                 | 257 |
| <b>Ladislav Robert and Marie Paule Jacob</b>                                                                 |     |
| Chapter 18                                                                                                   |     |
| Elastonectins: Inducible Proteins(s) Which Mediates the Attachment of Elastin to Mesenchymal Cells .....     | 287 |
| <b>William Hornebeck, Jean-Michel Tixier, and Ladislav Robert</b>                                            |     |
| Chapter 19                                                                                                   |     |
| Interactions Between Blood-Borne Cells and Elastic Fibers .....                                              | 297 |
| <b>Yves Legrand, Françoise Fauvel-Lafeve, and Suzanne Menashi</b>                                            |     |
| INDEX.....                                                                                                   | 305 |

# TABLE OF CONTENTS

## Volume II

### SECTION A: ELASTASES

#### I. MECHANISMS OF ACTION

##### Chapter 1

Mechanisms Involved in Elastin-Elastase Interaction ..... 3

**Jean M. Wallach and William Hornebeck**

##### Chapter 2

Mechanism of Action of Elastases ..... 13

**Joseph G. Bieth**

#### II. ELASTASES: CHARACTERIZATION AND BIOLOGICAL ROLES

##### Chapter 3

Human Neutrophil Elastase ..... 23

**Joseph G. Bieth**

##### Chapter 4

Human Platelet-Derived Elastase (EC.3.4.21-) ..... 33

**William Hornebeck and Yves J. Legrand**

##### Chapter 5

Macrophage Elastase ..... 39

**Chantal Lafuma and William Hornebeck**

##### Chapter 6

Aortic Elastase ..... 49

**William Hornebeck and Ladislav Robert**

##### Chapter 7

Fibroblast Elastase(s) ..... 57

**Rania Homsy, Pascale Pelletier-Lebon, Ladislav Robert, and William Hornebeck**

##### Chapter 8

On the Nature of the Elastase Activity of Human Serum ..... 63

**Rania Homsy, Maryse Ayrault-Jarrier, Ladislav Robert, and William Hornebeck**

##### Chapter 9

*Pseudomonas aeruginosa* Elastase ..... 73

**Kazuyuki Morihara**

#### III. BIOLOGICAL CONTROL OF ELASTOLYSIS AND THERAPEUTIC USE OF ELASTASE INHIBITORS

##### Chapter 10

Control of Elastolysis by Elastase Inhibitors: Kinetic Aspects ..... 87

**Joseph G. Bieth**

##### Chapter 11

Properties of Naturally Occurring Elastase Inhibitors ..... 95

**Guy Salvesen and Jim Travis**

|                                                                                              |     |
|----------------------------------------------------------------------------------------------|-----|
| Chapter 12                                                                                   |     |
| Design and Properties of Synthetic Elastase Inhibitors .....                                 | 109 |
| <b>Morris Zimmerman and James C. Powers</b>                                                  |     |
| Chapter 13                                                                                   |     |
| Targeted Bifunctional Elastase Inhibitors .....                                              | 125 |
| <b>William Hornebeck, Elemer Moczar, and Ladislav Robert</b>                                 |     |
| Chapter 14                                                                                   |     |
| Properties and Therapeutic Potential of Eglin C. ....                                        | 137 |
| <b>Hans-Peter Schnebli and Manfred H. Liersch</b>                                            |     |
| <b>SECTION B: ELASTIN AND ELASTASES IN PATHOLOGY</b>                                         |     |
| Chapter 15                                                                                   |     |
| Ultrastructure of Elastic Fibers in Pathology .....                                          | 147 |
| <b>Anna Kádár</b>                                                                            |     |
| Chapter 16                                                                                   |     |
| Elastin and Elastases in Lung Disease .....                                                  | 159 |
| <b>Jerome O. Cantor and Gerard M. Turino</b>                                                 |     |
| Chapter 17                                                                                   |     |
| Elastin and Elastases in the Pathology of the Arterial Wall.....                             | 169 |
| <b>Fred W. Keeley, Livia Todorovich, and Marlene Rabinovitch</b>                             |     |
| Chapter 18                                                                                   |     |
| Elastin and Elastic Fibers in Normal and Pathological Skins: Modifications with Aging .....  | 185 |
| <b>C. Frances, C. Robert, and Ladislav Robert</b>                                            |     |
| Chapter 19                                                                                   |     |
| Elastin in Human Breast Tumors .....                                                         | 203 |
| <b>William Hornebeck, Anna Kádár, Jean-Jacques Adnet, Ladislav Robert, and Judit Mohácsy</b> |     |
| Chapter 20                                                                                   |     |
| Neosynthesis of Elastin in Response to Vascular Injury .....                                 | 217 |
| <b>Madeleine Moczar</b>                                                                      |     |
| Chapter 21                                                                                   |     |
| The Temporal Arteritis/Polymyalgia Rheumatica Syndrome .....                                 | 227 |
