Preface, ix

Section A Mammalian cDNA cloning

Introduction, 3

Section A.1 *Isolation of mRNA and translation in vitro, 6*

A.1 Isolation of mRNA, 8

A.2 Purification of polyadenylated mRNA by affinity chromatography on oligo-dT cellulose, 10

A.3 *In vitro* translation of mRNA, 12

Section A.2 *Synthesis of double-strand cDNA and the construction of hybrid pAT153/cDNA plasmids by the homopolymeric tailing method, 14*

A.4 First-strand cDNA synthesis, 15

A.5 Second-strand cDNA synthesis, 20

A.6 S1 nuclease treatment of double-stranded cDNA, 24

A.7 Homopolymeric tailing of double-stranded cDNA, 27

A.8 Annealing of oligo dC tailed double-stranded cDNA with oligo dG tailed plasmid DNA, 32

Section A.3 *Transformation of Escherichia coli cells with cDNA-containing recombinant plasmid molecules and analysis of cDNA clone-bank, 34*

A.9 Transformation of competent *E. coli* cells by plasmid DNA, 35

A.10 Analysis of recombinant plasmid transformants, 39

A.11 Analysis of the plasmids present in recombinant clones, 46

Appendixes

A.I Preparation and use of micrococcal nuclease-treated reticulocyte lysates, 51

A.II Alternative method for second-strand cDNA synthesis, 54

A.III A procedure for characterizing preparations of S1 nuclease, 55

A.IV Analysis of products of cDNA synthesis by denaturing polyacrylamide gel electrophoresis, 57

A.V Additional notes and trouble shooting for Experiment A.9, 59

A.VI Single colony SDS lysate, 62

A.VIII Preparation of plasmid DNA, 63

Section B Analysis of DNA and RNA

Introduction, 71

- B.1 Construction of plasmid restriction maps, 72
- B.2 Detection of mammalian β -globin genes in total genomic DNA by filter hybridization with cloned β -globin cDNA, 80
- B.3 Spot hybridizations of animal DNAs, 91
- B.4 Northern blotting, 93

Appendixes

- B.I Additional notes and trouble shooting for experiments in Section B, 99
- B.II Electrophoretic separation of DNA fragments in agarose gels, 101
- B.III Recovery of DNA from agarose gels, 103

Section C DNA-dependent gene expression systems

Introduction, 107

- C.1 λ infection of ultraviolet-irradiated cells, 109
- C.2 Maxi-cells, 114
- C.3 Mini-cells, 118
- C.4 Polypeptides synthesized from DNA templates *in vitro*, 122

Appendixes

- C.I Some general media used in Section C, 126
- C.II SDS-polyacrylamide gel electrophoresis, 128
- C.III Autoradiography and fluorography of gels, 134
- C.IV Preparation of the components of an *E. coli in vitro* transcription/translation system, 137

Section D Bacteriophage λ as a vector

Introduction, 145

- D.1 Preparation of a bank of hybrid DNA, 155
- D.2 Preparation of extracts for *in vitro* packaging, 161

Appendixes

- D.I Preparation of a gene-bank in a λ vector, 165
- D.II DNA extraction from mouse livers, 166
- D.III Isolation of high molecular weight bacterial DNA, 169

Section E Electronmicroscopy of nucleic acids

Introduction, 173

- E.1 Mounting double-stranded DNA using the aqueous droplet technique, 175
- E.2 Heteroduplex mapping, 184
- E.3 Mapping self-annealing molecules (snap-backs), 187
- E.4 Mapping by R-looping, 188
- E.5 Preparation of open circles from supercoiled DNA, 190

Index, 191
