

Contents

1

Structure and Biological Properties of Bone 1

The skeleton and its structure	1
Development and growth of bone	7
Teeth	12
Physical and chemical properties of bone	12
Factors influencing the survival of buried bone	13

2

Planning and Organisation of Bone Studies 20

Bone studies in archaeology	20
Requirements for collecting bones in the field	24
Whole skeletons	29
Labelling, packaging and transporting bones	31
Preliminary tasks to be carried out by the specialist	35

3

Bone Identification and the Establishment of Reference Collections 37

Problems of identification	37
Comparative osteological collections	41
The specialised osteological collection	49
The preparation of comparative material	50

4

Techniques for the Study of Site Collections 55

Planning of the site study	55
The cultural context	55
Topic definition and the examinations to be made	58
Working procedure	63
Quantifying the species	63
fragments method	64
weight method	67
minimum numbers method	69
Determination of the minimum number of animals	70

5

Age Determination from Bones 76

Tooth eruption	78
Epiphyseal fusion	80
Suture closure	81
Incremental structures	84
Tooth wear	85
Antler development	89
Growth	89
Qualitative features	90

6

The Use of Measurements 91

Measuring a bone	95
Measuring technique and accuracy	98

7

The Determination of Sex from Bones 100

8

Bone Pathology 108

Abnormalities of development	109
Metabolic disorders of bone	110
Hormonal influences	112
Necrosis and inflammation of bones	112
Neoplastic and similar conditions	113
Bone discontinuities	114
Diseases of the joints	114

9

The Interpretation of Bone Evidence 120

Limiting factors of the archaeological evidence	120
The use of ancillary evidence	122
Site examples	123
Site 1. A Saxon farm, Whitehall, London	124
Site 2. Medieval workshop debris	138

10

Animal Remains as Indicators of Past Environments 143

Terrestrial mammals	143
Marine mammals	155
Reptiles, amphibians and fish	155
Birds	155
