<i>Series Introduction</i>	iii
<i>Preface</i>	v
<i>Contributors</i>	xv
<i>Introduction</i>	xix
 I. MICROBIOLOGY OF ANAEROBES	
1. Methodology of Anaerobic Cultivation	3
<i>Daniel Yee-Chak Fung</i>	
I. Introduction	3
II. Isolation of Anaerobes	4
III. Development of Anaerobic Cultivation Systems	5
IV. Identification of Anaerobes	17
V. Conclusions	18
References	19
2. Mutation and Genetic Engineering of Anaerobic Bacteria	27
<i>William M. Reed</i>	
I. Introduction	27
II. Clostridia	29
	vii

III. Anaerobic Ruminant Bacteria	40
IV. Methanogens	43
V. Conclusions	46
VI. Nomenclature	47
References	48
 3. Industrially Important Strains and Pathways	 59
<i>James C. Linden</i>	
I. Introduction	59
II. Methane	59
III. Acetate	62
IV. Ethanol	64
V. Lactic Acid	67
VI. Propionate and Acrylate	69
VII. Acetone	70
VIII. Acetoin and Butanediol	71
IX. Butyrate	73
X. Butanol	75
XI. Enzymes	76
References	77
 II. BIOCHEMISTRY, KINETICS, AND TRANSPORT IN ANAEROBIC FERMENTATION	
 4. Detailed Stoichiometry and Process Analysis	 83
<i>Charles L. Meyer and E. Terry Papoutsakis</i>	
I. Introduction and Scope	83
II. Macroscopic Balances of Growth and Product Formation	85
III. The Linear Equation of Substrate Consumption	88
IV. Advanced Stoichiometric ("Fermentation") Equations	91
V. Summary	115
References	116
 5. Kinetics of Growth and Product Formation	 119
<i>Larry E. Erickson</i>	
I. Introduction	119
II. Fermentation Kinetics	120

III. Effect of Temperature	123
IV. Effect of Chemical Environment	127
V. Structured Models	139
VI. Segregated Models	140
VII. Mixed Culture Models	140
VIII. Conclusions	141
IX. Nomenclature	141
References	143
6. Redox Potential in Anaerobic and Microaerobic Fermentation	147
<i>S. P. Srinivas, Govind Rao, and R. Mutharasan</i>	
I. Introduction	147
II. Principles	148
III. Measurement and Control of Redox Potential	152
IV. Metabolic Significance of Redox Potential Measurements	164
V. Conclusions	181
References	181
7. Membrane Processes and Product Formation in Anaerobes	187
<i>Peter Dürre, Hubert Bahl, and Gerhard Gottschalk</i>	
I. Introduction	187
II. Generation of the Proton-Motive Force	188
III. Use of the Proton-Motive Force	190
IV. Effects of Organic Acids on Membrane Processes	192
V. Effects of Neutral Compounds on Membrane Processes	197
VI. Concluding Remarks	201
References	201
8. Product Inhibition	207
<i>Rakesh Kumar Bajpai and Eugene Iannotti</i>	
I. Introduction	207
II. Effects of Gaseous Products	210
III. Effects of Dissociating Products	212
IV. Effect of Nondissociating Products	214

V. Models of Product Inhibition	218
VI. Conclusions	226
VII. Nomenclature	226
References	228
9. Chemically Structured Models for Anaerobic Growth and Product Formation	243

Mohammad M. Ataai and Michael L. Shuler

I. Introduction	243
II. Anaerobic Single-Cell and Population Models	246
III. Models for Recombinant Cells	253
IV. Conclusion	258
V. Nomenclature	258
Appendix I	258
Appendix II	262
References	264

10. Control of Carbon and Electron Flows in Acetone-Butanol Fermentations	269
---	-----

Rathin Datta

I. Introduction	269
II. Electron and Carbon Balances	270
III. Metabolic Pathway	272
IV. Metabolic Regulation	274
V. Metabolic Modulation	276
VI. Conclusions	285
References	286

III. BIOENERGETICS OF ANAEROBIC PROCESSES

11. Bioenergetics and Product Yields	293
--------------------------------------	-----

Mehmet D. Öner, Larry E. Erickson, and Shie-Shien Yang

I. Introduction	293
II. Mass Balances	294
III. Yield and Maintenance	295
IV. Parameter Estimation	296
V. Product Yield	296

VI. Free Energy Yield	299
VII. Results and Discussion	300
VIII. Conclusions	319
IX. Nomenclature	320
References	321
12. Bioenergetics and Yields for Anaerobic Digestion	325
<i>Larry E. Erickson</i>	
I. Introduction	325
II. Basic Bioenergetic Concepts	325
III. Yields Associated with Anaerobic Digestion	334
IV. Conclusions	340
V. Nomenclature	340
References	341
13. Bioenergetics and Yields with Electron Acceptors Other Than Oxygen	345
<i>Adriaan H. Stouthamer</i>	
I. Introduction	345
II. Mechanism of ATP Generation and Utilization	350
III. Methods for the Demonstration of Energy Generation During Electron Transport to Hydrogen Acceptors	356
IV. Utilization of Nitrogenous Oxides	358
V. Utilization of Fumarate	384
VI. Utilization of Sulfate	397
VII. Utilization of Sulfur	414
VIII. Utilization of Trimethylamine N-Oxide	415
IX. General Conclusions	419
References	420
IV. DATA COLLECTION AND ANALYSIS	
14. Measurements, Data Analysis, and Control	441
<i>Ka-Yiu San, E. Terry Papoutsakis, and Gregory Stephanopoulos</i>	
I. Introduction	441
II. Measurements	441

III. Data Analysis	446
IV. Control	452
V. Conclusion	457
References	458
 15. Statistical Estimation of Kinetic and Yield Parameters	 463
<i>Larry E. Erickson, Shie-Shien Yang, and Mehmet D. Öner</i>	
I. Introduction	463
II. Statistical Estimation	463
III. Kinetic Models	467
IV. Experimental Design	469
V. Covariate Adjustment Method	470
VI. Estimation of Derivatives	492
VII. Conclusions	492
VIII. Nomenclature	493
References	494
 V. MIXED CULTURE INTERACTIONS	
 16. Mixed Culture Interactions in Anaerobic Fermentations	 501
<i>Daniel Yee-Chak Fung, Mark Anthony Buono, Larry E. Erickson, and Mehmet D. Öner</i>	
I. Introduction	501
II. Mixed Pure Culture Fermentation and Estimation of Fermentation Performance	502
III. Mixed Culture Interactions in Nature and in Food Products	529
IV. Conclusions	532
References	533
 17. Interactions Between Hydrogen- and Formate-Producing Bacteria and Methanogens During Anaerobic Digestion	 537
<i>Jürgen H. Thiele and J. Gregory Zeikus</i>	
I. Introduction	537
II. Ecophysiological Context: Environment, Organisms, and Metabolism	538

III. Microniche Concepts: The Compartmentalization of Syntrophic Methanogenesis	550
IV. Interspecies Electron Transfer: Mechanisms and Evidence	558
V. Applications for Advanced Biomethanation Systems	580
VI. Conclusions	587
VII. Nomenclature	587
References	588
 18. Modeling Mixed Culture Interactions in Anaerobic Digestion: Applications to Digester Start-up and Control	 597
<i>Gregory Stephanopoulos</i>	
I. Introduction	597
II. Model Development	599
III. Evaluation of Start-up Procedures	612
IV. Model Applications to Digester Control	618
V. Summary	633
VI. Nomenclature	635
References	638
 19. Engineering Flavor into Fermented Foods	 641
<i>Ebenezer R. Vedamuthu</i>	
I. Introduction	641
II. Roles of Microorganisms in Flavor Development in Foods	647
III. Genetic Aspects of Microorganisms Used in Fermented Foods	683
IV. Summary and Conclusions	686
References	687
 VI. DESIGN AND APPLICATIONS OF ANAEROBIC SYSTEMS	
 21. Anaerobic Degradation of Toxic and Hazardous Wastes	 695
<i>Larry E. Erickson and L. T. Fan</i>	
I. Introduction	695
II. Genetics	696
III. Biodegradation Chemistry	697

IV. Kinetics	713
V. Bioenergetics and Nutrition	718
VI. Stability, Reliability, and Control	725
References	725
21. Performance of Immobilized Cell Reactors	733
<i>Jose L. Vega, Edgar C. Clausen, and James L. Gaddy</i>	
I. Introduction	733
II. Whole-Cell Immobilization Techniques	734
III. Biofilm Reactors	736
IV. Conclusions	758
V. Nomenclature	759
References	760
22. Design of Fixed Film and Fluidized Bed Bioreactors	765
<i>Graham F. Andrews</i>	
I. Introduction	765
II. Theory	775
III. Design Studies	790
IV. Conclusions	796
V. Glossary	797
VI. Nomenclature	798
References	799
23. Start-up, Dynamics, and Control of Anaerobic Digesters	803
<i>John Patrick Barford</i>	
I. Introduction	803
II. Strategy for the Development of an Industrial-Scale Anaerobic Digester from Laboratory to Pilot to Full Scale	805
III. Digester Stability, Dynamics, and Control	816
IV. Monitoring and Instrumentation of a Full-Scale Anaerobic Digester	824
V. Conclusions	826
References	827
Index	835
