

CONTENTS

Domains of Virus Glycoproteins

MILTON J. SCHLESINGER AND SONDR A SCHLESINGER

I.	Introduction	1
II.	Influenza Virus Hemagglutinin	2
III.	Alphavirus Glycoproteins	8
IV.	Vesicular Stomatitis and Rabies Virus Glycoproteins	13
V.	Retrovirus Glycoproteins	22
VI.	Other Virus Glycoproteins	28
VII.	Virus Glycoproteins and Polarized Cells	32
VIII.	Summary and Perspectives	33
	References	35

Flavivirus Replication Strategy

E. G. WESTAWAY

I.	Introduction	45
II.	Structure of the Virion	46
III.	Replication	50
IV.	Summary and Conclusions	82
	References	84

The Autonomously Replicating Parvoviruses of Vertebrates

SUSAN F. COTMORE AND PETER TATTERSALL

I.	Introduction	91
II.	Viral Structure and Organization	96
III.	Viral Life Cycle	137
	References	169

Regulation of Translation by Poliovirus

NAHUM SONENBERG

I.	Introduction	175
II.	Cap Binding Proteins of Eukaryotic mRNAs	176
III.	Involvement of the CBP Complex in the Shutoff of Host mRNA Translation after Poliovirus Infection	184
IV.	Alternative Models to Explain Poliovirus Inhibition of Host Protein Synthesis	191
V.	Translational Inhibition by Other Picornaviruses	194
VI.	Concluding Remarks and Perspectives	199
	References	200

Disease Induction by Plant Viruses

L. C. VAN LOON

I. Introduction	205
II. The Interactions of Viruses with Their Hosts	206
III. The Genetics of Host-Virus Interactions	224
IV. Alterations in Host Plant Metabolism	234
V. Concluding Remarks	247
References	249

The Dianthoviruses: A Distinct Group of Isometric Plant Viruses with Bipartite Genome

C. HIRUKI

I. Introduction	257
II. Dianthoviruses	257
III. Diseases Caused in Plants	258
IV. Physical, Chemical, and Biochemical Properties	260
V. Serological Studies	269
VI. Host Range and Symptomatology	276
VII. Replication	278
VIII. Genetic Reassortment Studies	281
IX. Cytopathology	286
X. Transmission by Vectors	289
XI. Ecological Studies	291
XII. Concluding Remarks	294
References	297

Banana Bunchy Top: An Economically Important Tropical Plant Virus Disease

JAMES L. DALE

I. Introduction	301
II. The Distribution of Bananas and the Geographical History of BBTV ..	302
III. The Characteristics of the Virus	306
IV. Control: The Australian Experience	314
V. The Future: Possible Directions	322
References	324

Approaches to the Study of Vector Specificity for Arboviruses—Model Systems Using Cultured Mosquito Cells

VICTOR STOLLAR

I. Introductory Remarks	327
II. Sindbis Virus Replication in Vertebrate and in Mosquito Cells—A Model System	331

III. Role of the Host Cell	332
IV. Role of the Virus	343
V. Concluding Remarks	362
References	363
INDEX	367
