Preface	xi

1 Historical Background

Jan Kocourek

I. The Early or Classical Period (1888-1918).....	3
II. The Intermediate Period (1919-1934).....	9
III. The Recognition of Specific Lectin Interactions (1935-1964)	11
IV. The Modern Period	21
V. The Early Terminology of Lectins	23
VI. Early Reviews and Books on Lectins	25
References	26

2 Isolation, Physicochemical Characterization, and Carbohydrate-Binding Specificity of Lectins

Irwin J. Goldstein and Ronald D. Poretz

I. Introduction and General Comments.....	35
II. Mannose/Glucose-Binding Lectins.....	51
III. N-Acetylglucosamine-Binding Lectins.....	85
IV. N-Acetylgalactosamine/Galactose-Binding Lectins	119
V. Fucose-Binding Lectins	196
VI. Sialic Acid-Binding Lectins	209

References	214
Appendix: Physical Characteristics of Lectins	244

3 Legume Lectins: A Large Family of Homologous Proteins

*A. Donny Strosberg, Dominique Buffard, Mark Lauwereys, and
Andre Foriers*

I. Common Structural Properties	251
II. Chemotaxonomy	251
III. Variability of Lectins in Single Plants	253
IV. Complete Sequences	258
V. Conclusion	262
References	263

4 Biological Properties of Lectins

Halina Lis and Nathan Sharon

I. Agglutination	266
II. Mitogenic Stimulation of Lymphocytes	270
III. Induction of Suppressor Cells	277
IV. Lectin-Dependent Cytotoxicity of Lymphocytes and Macrophages	278
V. Lectin-Mediated Phagocytosis of Target Cells	280
VI. Insulinomimetic Activity	281
VII. Lectin Toxicity	283
References	285

5 Applications of Lectins

Halina Lis and Nathan Sharon

I. Isolation and Structural Studies of Glycoconjugates ...	294
II. Studies of Cellular and Subcellular Membranes	309
III. Cell Separation	328
IV. Identification of Microorganisms	341
V. Lectin-Resistant Cells	342
VI. Lectins as Drug Carriers	353
VII. Clinical Uses	353
References	357

6 Distribution and Function of Plant Lectins

Marilynn E. Etzler

I. Introduction.....	371
II. Distribution and Subcellular Localization of Lectins in Plants	372
III. Proposed Roles.....	392
IV. Endogenous Lectin Receptors.....	412
V. Regulation of Lectin Synthesis and Activity	414
VI. Concluding Remarks	421
VII. Addendum	422
References	425

7 Vertebrate Lectins: Properties and Functions

Samuel H. Barondes

I. Soluble Tissue Lectins	438
II. Membrane Lectins	450
III. Other Vertebrate Lectins	459
IV. Conclusion.....	461
References	462

8 Lectins in Cellular Slime Molds

Samuel H. Barondes

I. Developmental Regulation of Lectins in Slime Molds ..	468
II. Purification and Properties of Slime Mold Lectins	469
III. Cellular and Tissue Localization of Lectins	473
IV. Glycoconjugate Ligands	476
V. Role in Cell Adhesion	483
VI. Summary	489
References	490

9 Bacterial Lectins

Nathan Sharon

I. Introduction.....	494
II. Surface Lectins of Enterobacteriaceae Specific for Mannose.....	495
III. Surface Lectins of <i>Escherichia coli</i> Specific for Galactosyl $\alpha(1 \rightarrow 4)$ Galactose (Type P Fimbriae).....	507
IV. Lectins of <i>Vibrio cholerae</i> Specific for L-Fucose	511

V.	Fimbrial Lectins of Oral <i>Actinomyces</i> Specific for Galactose and N-Acetylgalactosamine (Type 2 Fimbriae)	512
VI.	Lectins of Myxobacteria Specific for Galactose Derivatives	516
VII.	Lectins of <i>Mycoplasma</i> Specific for N-Acetylneuraminy Galactose	517
VIII.	Lectins of <i>Pseudomonas aeruginosa</i> Specific for Mannose, Galactose, and L-Fucose/Mannose	520
IX.	Concluding Remarks	521
	References	522

10 Nutritional Significance of Lectins in the Diet

Irvin E. Liener

I.	Introduction	527
II.	Nutritional Significance of Lectins in Various Plants ..	528
III.	Mode of Action	534
IV.	Significance in the Human Diet	544
	References	547

Index	553
