Preface

v

1

Introduction

I. General introduction	1
II. Aims and objectives	2

2

Antiserum Production

I. Preparation of antigens	5
A. Antigen purity	5
B. Nature of antigen preparation	6
C. Antigen mixtures	7
II. Preparation of antigens for immunization	8
A. Adjuvants	8
B. Amount of antigen	9
C. Weakly immunogenic antigens	10
III. Immunization procedures	12
A. Selection of species	12
B. Sites of immunization	12
C. Immunization schedules	13
IV. Trial and preparative bleeding procedures	13
V. Monoclonal antibodies	13

3

Antiserum Processing

I. Purification of immunoglobulins	18
II. Assessment of antiserum specificity	18
A. Immunodiffusion	19
B. Immunoelectrophoresis	24

C. Identification of antigen-antibody system of interest	25
III. Purification of antibodies to antigen of interest	28
A. Adsorption of an antiserum with contaminating antigens	28
B. Adsorption of an antiserum with antigen of interest	30
IV. Reassessment of antiserum specificity	33

4

Uses of Antisera

I. Determination of antigen amount	36
A. Quantitative immunoprecipitation in gels	37
B. Measurements coupled to enzyme activity	39
C. Radioimmune and enzyme-immune assays	46
D. Radioimmune assays of small molecules: cyclic nucleotides	53
E. General conclusions	54
II. Reactions of identity	55
III. Immunoisolation procedures	55
A. Immunoprecipitation methods	56
B. Immunoabsorption methods	64
IV. Immunohistochemistry	73
A. Ferritin-conjugated antibodies	74
V. Recent developments in the uses of antibodies	77
A. Antibodies as membrane surface probes	78
B. Determination of antigen molecular weight	85
C. Determination of antigen isoelectric point	85
D. Determination of intrinsic or extrinsic nature of membrane proteins	86
E. Identification of calcium-binding proteins	86
F. Identification of phosphorylated antigens	86
G. Isolation of specific cell types and subcellular organelles	87

5

Case Study I: Immunochemical Studies on Membrane Protein Antigens

I. Membrane problems subjected to immunochemical analysis	89
II. Immunochemical studies on membrane antigens	97
A. Golgi apparatus	97
B. Inner mitochondrial membrane	98
C. Endoplasmic reticulum	99

D. Sarcoplasmic reticulum	102
E. Plasma membrane	103
F. Brush border	105

6

Case Study II: Antigens in the Nervous System

I. Introduction	110
II. Antigens in the cholinergic synapse	111
A. Choline acetyltransferase	114
B. Acetylcholinesterase	116
C. Acetylcholine receptor	119
III. Antigens in the adrenergic synapse	122
A. Dopamine β hydroxylase	122
B. Chromomembrin B	124
C. Other adrenergic antigens	125
IV. Summary	125

7

Technical Supplement

I. Antigen preparation	126
II. Immunization details	127
A. Antigen amount and immunization sites	127
B. Antigen-adjuvant mixtures	128
III. Bleeding procedures	128
IV. Antiserum processing	129
V. Preparation of IgG fragments	132
VI. Labelling of IgG and IgG fragments	132
A. Labelling with other proteins	132
B. Fluorescent antibody	132
C. Radiolabelled antibody (and antigen)	133
VII. Immunoprecipitation agarose gels	134
A. Apparatus	134
B. Solutions required	135
C. Casting agarose gels	136
D. Procedure for immunodiffusion	136
E. Procedure for rocket immunoelectrophoresis	137
F. Procedure for crossed immunoelectrophoresis (Weeke, 1973b)	139
G. Staining gels for protein	144

VIII. Techniques for the identification of antigens in immunoprecipitation lines	145
IX. Preparation of immunoadsorbents	148
X. Staphylococcal Protein A-antibody absorbent	149
References	152
Subject Index	162
