Preface	vii

CHAPTER 1

Metabolic Control in Higher Plants

D. D. Davies

I. Introduction	1
II. Metabolic Interlock	1
III. Energy Charge	2
IV. Control Involving the Ratio NAD/NADH	3
V. Interaction Between Effectors	6
VI. Control of and by pH	6
A. Carboxylation Reactions	11
B. Decarboxylation Reactions	12
VII. Control by Pyridoxal and Pyridoxamine Phosphates	16
References	19

CHAPTER 2

Some Aspects of the Regulation of Amino Acid Biosynthesis in Bacteria

H. Tristram

I. Introduction	21
II. Proline Analogues	22
A. Growth Inhibition	22
B. Proline Biosynthesis	24
C. Control of Proline Biosynthesis	25
III. Phenylalanine Analogues	27
IV. Enzyme Repression	31
A. Jacob-Monod Model	31
B. Histidine Biosynthesis	33
C. Role of Aminoacyl-tRNA Synthetases	36
D. Translational Control	39
E. Role of Feedback-inhibited Enzymes	41
V. Concluding Remarks	44
References	46

CHAPTER 3

Amino Acid Biosynthesis and its Control in Plants

B. J. Miflin

I. Biosynthetic Pathways	49
A. Aspartate Family	49
B. Aromatic Amino Acids	53
C. Glutamate Family	53
D. Branched Chain Amino Acids	55
E. Others	55
II. Control of Amino Acid Biosynthesis	55
A. Evidence for Control <i>in vivo</i>	55
B. Evidence for Repression	58
C. Feedback Modification of Enzyme Activity	59
III. Summary	65
Acknowledgements	66
References	67

CHAPTER 4

The Regulation of Ribosomal RNA Synthesis

J. Ingle

I. Introduction	69
II. Transcription and Processing of rRNA	69
III. The rRNA Gene	76
A. The Number of Copies of the Gene	76
B. The Possibility of Gene Amplification	79
C. Utilization of the Genes	85
References	90

CHAPTER 5

Plant Cell Cultures:
Their Potential for Metabolic Studies

H. E. Street

I. Introduction	93
II. Growth and Degree of Cell Separation	94
III. Metabolic Studies with Batch-propagated Cell Suspensions	99
IV. Continuous Culture Systems and the Achievement of Steady States of Growth and Metabolism	110
V. Gene Expression in Plant Cell Cultures	118
VI. The Isolation of Genetic Variants of Cultured Cells	122
Acknowledgements	123
References	124

CHAPTER 6

Ethylene and Protein Synthesis

D. J. Osborne

I. Introduction	127
A. Plant Material	128
B. Visible Response of Intact Plants	128
II. Protein Metabolism in Ethylene	131
A. The Hydroxyproline-rich Proteins of the Cell Wall	134
B. Hydroxyproline-rich Glycoproteins and Cell Growth	136
III. Conclusions	141
References	141

CHAPTER 7

Biosynthesis of Gibberellins

C. A. West

I. Introduction	143
II. Biosynthetic Pathway	143
III. Other Aspects of Gibberellin Biosynthesis	148
A. Enzymic Cyclization of Geranylgeranyl Pyrophosphate to Kaurene	149
B. Oxidative Reactions in Gibberellin Biosynthesis	155
Acknowledgements	168
References	169

CHAPTER 8

Stereochemical Aspects of Enzyme Action

J. W. Cornforth

References	178
----------------------	-----

CHAPTER 9

The Control of Fatty Acid Biosynthesis in Plants

B. Sedgwick

I. Introduction	179
II. Mechanism of Fatty Acid Biosynthesis	180
A. <i>De novo</i> Biosynthesis	180
B. Chain Elongation of Fatty Acids	190
C. Formation of Unsaturated Fatty Acids	191
III. General Factors Affecting Fatty Acid Biosynthesis	195
A. Species Specificity	195

B. Nutritional Status	196
C. Growth Conditions	197
D. Other Environmental Factors	198
E. Stage of Development	199
IV. Factors Controlling Fatty Acid Biosynthesis at the Molecular Level	200
A. Synthesis of Enzymes	200
B. Synthesis of Cofactors	203
C. Availability and Synthesis of Primary Substrates	203
D. Regulation of Primary Substrates	204
E. Regulation of Biosynthetic Enzymes	205
F. Termination Reactions	207
V. The Stereochemistry of Reactions in Fatty Acid Synthesis	208
A. General Considerations	208
B. Acetyl-CoA Carboxylase	208
C. Reactions of the Fatty Acid Synthetase	210
References	213

CHAPTER 10

Hormones and Carbohydrate Metabolism in Germinating Cereal Grains

D. E. Briggs

I. Introduction	219
A. General Considerations	219
B. The Structure of the Barley Grain	220
C. Experimental Materials and Conditions of Germination	223
II. The Carbohydrates of the Barley Grain	224
A. Soluble Carbohydrates, Gums and Hemicelluloses and Enzymes that Degrade them	224
B. Starch	233
C. The Estimation of Enzymes Degrading Starch	237
III. Grain Germination and Carbohydrate Mobilization	238
A. The Background	238
B. More Recent Experiments: Gibberellins and α -Amylase	239
C. Endogenous Gibberellin-like Substances and α -Amylase Formation	247
D. The Regulation of α -Amylase Levels in Germinating Barley	264
E. The Regulation of β -Amylase Activity in Germinating Barley	270
F. Hormones, and the Regulation of Other Carbohydrase Activities	271
Acknowledgements	273
References	273

CHAPTER 11

The Synthesis of Chloroplast Enzymes

J. W. Bradbeer

I. Introduction	279
II. Leaf Development	279

III. Chloroplast Development	281
IV. Enzyme Synthesis	288
V. The Sites of Enzyme Synthesis	296
VI. The Role of Light in Enzyme Synthesis	299
VII. Summary	301
Acknowledgements	301
References	301

CHAPTER 12

Regulatory Mechanisms in the Photocontrol of
Flavonoid Biosynthesis

H. Smith

I. Introduction	303
II. The Locus of the Light-regulated Steps in the Biosynthetic Pathway	304
A. Precursor Incorporation Evidence	305
B. Enzyme Studies	307
III. The Photocontrol of PAL Levels	307
A. The Increase in Enzyme Activity	310
B. The Decline in PAL Levels	316
IV. Conclusions	319
References	320

CHAPTER 13

The Non-protein Amino Acids of Plants:
Concepts of Biosynthetic Control

L. Fowden

I. Introduction	323
II. Amino Acids Characteristic of the Families Sapindaceae and Hippo- castanaceae	324
III. The Distribution and Biosynthesis of Azetidine-2-carboxylic Acid and β -(Pyrazol-1-yl)alanine	329
A. Occurrence	329
B. Control of Synthesis	330
IV. Non-protein Amino Acids as Analogues in the Control of Protein Syn- thesis	333
V. Unusual Amino Acids and the Wider Aspects of Biological Control	336
References	338
Author Index	341
Subject Index	353
