PREFACE

xiii

1. *Fluorescent Analog Cytochemistry: Tracing Functional Protein Components in Living Cells*

Yu-li Wang

I. Introduction	1
II. Equipping the Laboratory for Fluorescent Analog Cytochemistry	3
III. Preparation of Fluorescent Analogs	5
IV. Assays of Fluorescent Analogs and Preparations for Microinjection	7
V. Delivery of the Conjugates and Handling of Living Cells	8
VI. Data Collection and Interpretation	9
VII. Prospectus	11
References	12

2. *Fluorescent Analogs of Peptides and Hormones*

Frederick R. Maxfield

I. Introduction	13
II. Designing a Fluorescent Analog	14
III. Characterization of Fluorescent Analogs	17
IV. Examples of the Use of Fluorescent Analogs of Hormones and Peptides	21
References	27

3. *Fluorescent Analogs of Toxins*

Kimron J. Angelides

I. Introduction	29
II. Examples of Fluorescent Toxins	31
III. Selection, Preparation, and Utilization of Fluorescent Toxin Analogs	34
IV. Use of Fluorescent Toxin Analogs	48
V. Requirements for Successful Application of Toxin Analogs	56
References	57

4. <i>Preparation of Fluorescently Labeled Dextrans and Ficolls</i> <i>Katherine Luby-Phelps</i>	
I. Introduction	59
II. Methods	63
III. Further Considerations in the Use of Fluorescent Dextrans and Ficolls	71
References	72
5. <i>A Fluorescent Derivative of Ceramide: Physical Properties and Use in Studying the Golgi Apparatus of Animal Cells</i> <i>Richard E. Pagano</i>	
I. Introduction	75
II. Synthesis and Purification of C ₆ -NBD-ceramide	76
III. Use of Resonance Energy Transfer (RET) to Study C ₆ -NBD-ceramide in Liposomes	78
IV. Properties of C ₆ -NBD-ceramide in Cells	82
V. Prospectus	84
References	85
6. <i>Fluorescent Labeling of Cell Surfaces</i> <i>Michael Edidin</i>	
I. Introduction	87
II. Direct Chemical Labels of Cell Surfaces	88
III. Fluorescent Ligands as Labels of Cell Surfaces	92
References	101
7. <i>Fluorescent Labeling of Mitochondria</i> <i>Lan Bo Chen</i>	
I. Introduction	103
II. Unique Property of Mitochondria: High Membrane Potential	105
III. Fluorescent Dyes with Delocalized Positive Charges	106
IV. Rhodamine 123 as a Conditional Supravital Dye	107
V. Methods of Labeling and Quantitation	109
VI. Mitochondrial Localization	111
VII. Mitochondrial Morphology	111
VIII. Mitochondrial Motility and Distribution	113
IX. Monitoring Mitochondrial Membrane Potential	115
X. Monitoring Mitochondrial Total Electrochemical Gradient	118
XI. Flow Cytometry, Cell Sorting, and Other Applications	119
References	120

8. *Fluorescent Labeling of Endoplasmic Reticulum*

Mark Terasaki

I. Introduction	125
II. Materials	127
III. Labeling Procedures	129
IV. Analysis of the Staining	131
V. Summary	134
References	134

9. *Fluorescent Labeling of Endocytic Compartments*

Joel Swanson

I. Introduction	137
II. Fluorescent Probes	138
III. Identifying Compartments of the Endocytic Pathway	146
References	150

10. *Incorporation of Macromolecules into Living Cells*

Paul L. McNeil

I. Introduction	153
II. Strategies for Loading Living Cells	154
III. Selected Techniques for Loading Living Cells	156
IV. Evaluation and Analysis of Loaded Cells	166
References	172

11. *Hapten-Mediated Immunocytochemistry: The Use of Fluorescent and Nonfluorescent Haptens for the Study of Cytoskeletal Dynamics in Living Cells*

Gary J. Gorbisky and Gary G. Borisy

I. Introduction	175
II. Advantages of Hapten-Mediated Immunocytochemistry	176
III. Preparation of Reagents	178
IV. Application of Hapten-Mediated Immunocytochemistry	181
V. Conclusion and Future Outlook	187
VI. Technical Appendix	188
References	192

12. *Culturing Cells on the Microscope Stage*
Nancy M. McKenna and Yu-li Wang
 - I. Introduction 195
 - II. Requirements of the Microscope Culture System 196
 - III. Cell Culture Chambers 197
 - IV. Microscope Incubators 201
 - References 205
13. *Basic Fluorescence Microscopy*
D. Lansing Taylor and E. D. Salmon
 - I. Introduction 208
 - II. Microscope Design 215
 - III. Practical Issues of Epiillumination Fluorescence Microscopy 229
 - IV. Basic Setup of an Epiillumination Fluorescence Microscope 234
 - References 236
14. *Quantitative Fluorescence Microscopy Using Photomultiplier Tubes and Imaging Detectors*
John E. Wampler and Karl Kutz
 - I. Introduction 239
 - II. Accessories for Quantitative Fluorescence Analysis 256
 - III. Detectors for Quantitative Fluorescence Microscopy 260
 - References 265
15. *Characteristics of Low Light Level Television Cameras*
Kenneth R. Spring and R. Joel Lowy
 - I. Introduction 270
 - II. Requirements for a Low Light Level Video Camera 270
 - III. Criteria for Camera Selection and Evaluation 282
 - IV. Performance Characteristics of Existing Low Light Level Cameras 285
 - V. Future Developments 288
 - References 289
16. *Solid-State Imagers for Microscopy*
R. S. Aikens, D. A. Agard, and J. W. Sedat
 - I. The History of Solid-State Imagers 292
 - II. Theory of CCD Imagers 293
 - III. CCD Camera Implementations 300

IV. CCD Performance	302
V. Quantitative Imaging with CCDs	309
VI. Future Trends in Solid-State Detector Development	312
VII. Summary	313
References	313
