Preface

Acknowledgments

xi

xiii

1. What Are Cytoplasmic Genes

Cytoplasmic DNA's

Formal Genetics of Cytoplasmic Systems

3

5

2. Cytoplasmic DNA's

Identification of Organelle DNA's

Organelle DNA's of Plant Cells

Identification of Mitochondrial DNA's

The Uniqueness of Organelle DNA

Size and Circularity of Organelle DNA

Genomic Size of Organelle DNA's

Heritable Alteration in Yeast Mitochondrial DNA

Replication and Repair of Organelle DNA's

Control of Replication of Organelle DNA's

Loss of Organelle DNA

Concluding Remarks

Suggested Review Articles

GENETIC ANALYSIS OF CYTOPLASMIC SYSTEMS

3. Cytoplasmic Genes in *Chlamydomonas*

Introduction	49
Some Properties of <i>Chlamydomonas</i>	54
Transmission of Cytoplasmic Genes in <i>Chlamydomonas</i> : A Summary	69
Genetic Analysis of Cytoplasmic Genes in <i>Chlamydomonas</i>	71
Persistent Heterozygotes	96
Concluding Remarks	98
Suggested Review Articles	101
References	101

4. Mitochondrial Genetics of Yeast

Sexual Life of <i>Saccharomyces cerevisiae</i>	106
Early Hints of Mitochondrial Heredity	107
Cytoplasmic <i>Petites</i>	109
Induction of Cytoplasmic <i>Petites</i> by Other Methods	116
Suppressive <i>Petites</i>	120
Studies of Suppressiveness at the Cellular Level	123
Recent Developments in Mitochondrial Genetics of Yeast	130
Concluding Remarks	140
Suggested Review Articles	142
References	142

5. Cytoplasmic Genes in *Neurospora* and Other Fungi

Genetic Analysis of <i>Poky</i> and Related Strains of <i>Neurospora</i>	146
Biochemical Studies of <i>Poky</i>	158
Studies of Cytoplasmic Mutants by Microinjection	162
Studies of Cytoplasmic Heredity in <i>Podospora</i>	165
Studies of Cytoplasmic Heredity in <i>Aspergillus</i>	171
Concluding Remarks	176
Suggested Review Articles	177
References	177

6. Cytoplasmic Genes in Higher Plants

Chloroplast Variegation and Pollen Sterility in <i>Zea mays</i>	187
Inheritance of Pollen Sterility	192
Biparental Inheritance in <i>Pelargonium</i>	195
Cytological Identification of "Mixed" Cells	201

<i>Epilobium</i> and the Plasmone Hypothesis	202
Plastid Autonomy in <i>Oenothera</i>	205
The Role of Plastid Genes in Evolution in the Genus <i>Oenothera</i>	212
Concluding Remarks	214
Suggested Review Articles	215
References	216

Patterns of Transmission of Cytoplasmic Genes: A Summary

Mutagenesis	220
Phenotypes	220
Identification	221
Preferential Transmission	221

CYTOPLASMIC GENES AND ORGANELLE BIOGENESIS

Introductory Remarks	225
-----------------------------	-----

7. The Role of Mitochondrial Genes in Mitochondrial Biogenesis

Structural Organization	228
Mitochondrial RNA's and Ribosomes	241
Origin of Mitochondrial Proteins	253
Summary	269
Suggested Review Articles	272
References	272

8. The Role of Cytoplasmic Genes in the Biogenesis of Chloroplasts

Molecular Composition and Structure of Chloroplasts	280
Chemical Composition of the Chloroplast	283
Chloroplast Ribosomes and RNA's	300
Origin of Chloroplast Proteins	310
Concluding Remarks	338
Suggested Review Articles	340
References	340

Concluding Remarks	351
---------------------------	-----

9. Cytoplasmic Genes and Cell Heredity

Some Postulated Advantages to Cells of Cytoplasmic Genomes	355
Aspects of Cell Heredity Not Previously Considered	362
Some Recent Applications of Cytoplasmic Genetics	371
Concluding Remarks	374
References	376

Appendix

Cesium Chloride Density Gradient Centrifugation	381
Density Transfer Method to Examine the Molecular Pattern of DNA Replication	382
Nearest-Neighbor Frequency Analysis	383
Kinetics of Renaturation of DNA	385
References	386
