Preface

xi

I. RAPID DNA SEQUENCING TECHNIQUES

1. Nucleotide Sequence of Bacteriophage ϕ X174 DNA 1
John C. Fiddes
2. A Promotor Region for Yeast 5S RNA 15
*Walter Gilbert, Allan M. Maxam, Richard Tizard,
and Konstantin G. Skryabin*

II. RECOMBINATION DNA TECHNOLOGY: METHODS AND RESULTS

3. The Mechanism of Phase Variation 25
*Janine Zieg, Michael Silverman, Marcia Hilmen,
and Melvin Simon*
4. Workshop Summary: Plasmid Vectors 37
H. Boyer
5. Workshop Summary: Phage Vector Systems 39
Dan S. Ray
6. Model Recombinants for the Development and Manipulation of
EK2 Phage Vector Systems 41
Daniel J. Donoghue and Phillip A. Sharp
7. Bacteriophage ϕ 1 as a Vector for Constructing Recombinant DNA
Molecules 55
Gerald F. Vovis, Mariko Ohsumi, and Norton D. Zinder
8. Cloning of Satellite DNA Sequences with the λ Vector λ gt-araB 63
Peter Philippsen, Chong S. Lee, and Ronald W. Davis

9. Workshop Summary: Screening for Recombinant DNAs <i>J. E. Dahlberg</i>	73
10. Screening for Recombinant DNAs with <i>In Situ</i> Immunoassays <i>A. Skalka and L. Shapiro</i>	75
11. Molecular Cloning of λ 80dara Restriction Fragments with Noncomplementary Ends <i>Donald A. Kaplan, Lawrence Greenfield, and Gary Wilcox</i>	85
12. Horizontal Slab Gel Electrophoresis of DNA <i>Donald A. Kaplan and Gary Wilcox</i>	103
13. Workshop Summary: Vehicles for Molecular Cloning in Mammalian Host Cells <i>George C. Fareed</i>	111
14. SV40 Vectors for Molecular Cloning in Mammalian Cells <i>George C. Fareed</i>	113
15. Construction of SV40 Vectors and Expression of Inserted Sequences <i>Stephen P. Goff and Paul Berg</i>	129
16. Episomal States of an SV40- <i>Escherichia Coli</i> Recombinant Genome in Different Mammalian Cell Lines <i>P. Upcroft, J. A. Upcroft, H. Skolnik, and G. C. Fareed</i>	141
17. Mapping of Sequences with Twofold Symmetry on the SV40 Genome <i>Che-Kun James Shen and John E. Hearst</i>	153
18. Studies on an SV40 DNA Carrier State in Monkey Cells in Culture <i>John M. Jordan</i>	167
 III. GENETICS AND MOLECULAR BIOLOGY OF YEAST	
19. The <i>HIS4</i> Fungal Gene Cluster Is Not Polycistronic <i>Ramunas Bigelis, Joseph Keesey, and G. R. Fink</i>	179
20. Workshop Summary: Yeast <i>E. P. Geiduschek</i>	189
21. Mating Type Interconversion in Yeast and Its Relationship to Development in Higher Eucaryotes <i>Ira Herskowitz, Jeffrey N. Strathern, James B. Hicks, and Jasper Rine</i>	193
22. Co-ordinate Regulation of the Synthesis of Yeast Ribosomal Proteins <i>Charles Gorenstein and Jonathan R. Warner</i>	203

23. Isolation and Characterization of <i>Escherichia Coli</i> Clones Containing Genes for the Stable Yeast RNA Species <i>Jacques S. Beckmann, Peter F. Johnson, John Abelson, and Shella A. Fuhrman</i>	213
24. Organization of Ribosomal DNA in Yeast <i>Jane Haris Cramer, Frances W. Farrelly, Joy T. Barnitz, and Robert H. Rownd</i>	227
25. Organization of Yeast Ribosomal DNA <i>Thomas D. Petes, Lynna M. Hereford, and David Botstein</i>	239
IV. GENETICS AND MOLECULAR BIOLOGY OF NEUROSPORA AND SLIME MOLDS	
26. Tricks for RNA Labeling and Partial Restriction Digests <i>Nancy Maizels</i>	247
27. Genetic Control of Phosphorus Metabolism in <i>Neurospora</i> <i>Robert L. Metzenberg and Robert E. Nelson</i>	253
28. Regulation of Quinate Catabolism in <i>Neurospora</i> : The QA Gene Cluster <i>J. W. Jacobson, J. A. Hautala, M. C. Lucas, W. R. Reinert, P. Strøman, J. L. Barea, V. B. Patel, M. E. Case, and N. H. Giles</i>	269
29. Workshop Summary: <i>Neurospora</i> <i>Richard Weiss</i>	285
30. Workshop Summary: Slime Molds <i>Richard A. Firtel and William F. Loomis</i>	287
31. Poly(A) Metabolism in <i>Dictyostelium Discoideum</i> <i>Allan Jacobson, Carl Mathew Palatnik, Cheryl T. Mabie, and Carol Wilkins</i>	291
32. Analysis of Recombinant Plasmids Carrying Gen ⁺ Sequences from <i>Dictyostelium</i> <i>Karen L. Kindle and Richard A. Firtel</i>	301
33. Organization of Ribosomal and 5S RNA Coding Regions in <i>Dictyostelium Discoideum</i> <i>William C. Taylor, Andrew F. Cockburn, Gary A. Frankel, Mary Jane Newkirk, and Richard A. Firtel</i>	309

V. CONTROL MECHANISMS AND GENE ORGANIZATION
IN DROSOPHILA

34. A New Approach for Identifying and Mapping Structural Genes
in *Drosophila Melanogaster* 315
Michael W. Young and David S. Hogness
35. Identification of a Cis-Acting Control Element in *Drosophila*
Melanogaster 333
Arthur Chovnick, Margaret McCarron, and William Gelbart

VI. GENETICS AND DEVELOPMENTAL MECHANISMS
IN NEMATODES

36. Expression of Genes Essential for Early Development in the
Nematode, *C. Elegans* 347
David Hirsh, William B. Wood, Ralph Hecht, Stephen Carr,
and Rebecca Vanderslice
37. Workshop Summary: Nematodes 357
W. B. Wood
38. Mutants of Acetylcholine Metabolism in the Nematode
Caenorhabditis Elegans 359
Richard L. Russell, Carl D. Johnson, James B. Rand,
Stewart Scherer, and Maurice S. Zwass
39. Studies on Two Body-Wall Myosins in Wild Type and
Mutant Nematodes 373
Frederick H. Schachat, Harriet E. Harris, Robert L. Garcea,
Janice W. LaPointe, and Henry F. Epstein

VII. MAMMALIAN GENETIC SYSTEMS

40. The Isolation of a Suppressible Nonsense Mutant in Mammalian
Cells 381
M. R. Capecchi, R. A. Vonder Haar, N. E. Capecchi,
and M. M. Sveda
41. Cyclic AMP, Microtubules, Microfibrils, and Cancer 399
Theodore T. Puck
42. Gene Transfer in Somatic Cell Populations 413
Frank H. Ruddle
43. Workshop Summary: Mammalian Genetic Systems 419
Immo Scheffler

CONTENTS

ix

44. Genetic Control of Argininosuccinate Synthetase in Human Lymphoblasts	421
<i>Joseph D. Irr and Lee B. Jacoby</i>	
45. Small Stable RNA Molecules in the Nucleus: Possible Mediators in Gene Expression	431
<i>David Apirion, Imre Berek, Bikram S. Gill, and Uma S. Podder</i>	
Author Index	441
Subject Index	443
