

Contents

Chapter 1

Phage Evolution and Speciation

Allan Campbell

I. The Species Concept and Its Application to Phages	1
II. Molecular Biology and the Origins of Phage	3
III. The Gene Pool	4
IV. Phage Genes Related to Host Genes	6
V. Host Functions Replaceable by Phage-Derived Genes	6
VI. Recombination in Natural Populations	7
VII. Source and Distribution within the Genome of Recombinable Variation	8
VIII. Reproductive Isolation in Nature	11
References	12

Chapter 2

Control Mechanisms in dsDNA Bacteriophage Assembly

Sherwood Casjens and Roger Hendrix

I. Introduction	15
II. The Structure of dsDNA Phage Virions	17
A. Head Structure	20
B. Tail Structure	27
C. Small Molecules in Phage	34
III. The Nature of Phage Assembly Pathways	34
IV. Current Problems in Phage Assembly and Structure	37
A. Assembly Pathways	37
B. Size Determination	46

C. Nonequivalent Protein-Protein Interactions	53
D. Structural Movements and Molecular Machines	59
V. Genes and Morphogenesis	63
A. Control of Gene Expression	63
B. Gene Position	70
VI. Prospects	74
References	75

Chapter 3

Changes in RNA Polymerase

E. Peter Geiduschek and George A. Kassavetis

I. Introduction	93
II. Covalent Modifications of RNA Polymerases	94
III. Proteins Binding to the Bacterial RNA Polymerase Core	95
A. Phage-Coded Initiation Proteins	96
B. Other RNA Polymerase Core-Binding Proteins	100
IV. DNA-Binding Proteins That Interact with, and Enhance the Activity of, RNA Polymerase	104
V. Other RNA Polymerase-Binding Proteins and Other Phages ..	107
VI. Concluding Comments	109
References	109

Chapter 4

The Single-Stranded RNA Bacteriophages

Jan van Duin

I. Introduction	117
II. Classification of RNA Phages	118
A. RNA Coliphages	118
B. RNA Phages of Other Genera	122
III. Ecology of Coliphages	122
IV. The Infection Process	123
V. Virion Structure	124
VI. Replication of Phage RNA	124
A. Mature Phage RNA	124
B. 6S RNA and Q β RNA Variants	127
VII. Origin and Evolution of the 6S RNA Families	133
VIII. Gene Expression	135
A. The A Protein	135
B. The Replicase (Subunit II)	136
C. The Coat Protein	140
D. The Lysis Protein of Group A Phages	144
E. The Lysis Protein of Group B Phages	153
IX. Sequence Comparison between Group I, II, and III Phages ..	153
A. The Maturation Protein	153
B. The Replicase	156

C. The Coat Protein	156
D. The Lysis Protein	156
E. The Noncoding Regions	158
F. The Savings between MS2 and GA	158
X. Phylogeny of RNA Phages	159
XI. Concluding Remarks	160
References	161

Chapter 5

Phages with Protein Attached to the DNA Ends

Margarita Salas

I. Introduction	169
II. Characterization of the Terminal Protein at the DNA Ends of the Phage ϕ 29, Cp-1, and PRD1 Families	170
A. Phage ϕ 29 and Related Phages	170
B. Phage Cp-1 and Related Phages	170
C. Phage PRD1 and Related Phages	171
III. Linkage between the Terminal Protein and the DNA of Phages ϕ 29, Cp-1, and PRD1	171
IV. Nucleotide Sequence at the DNA Ends of the ϕ 29, Cp-1, and PRD1 Families	172
A. ϕ 29 Family	172
B. Cp-1 Family	172
C. PRD1 Family	173
V. Transcription of ϕ 29 DNA	173
VI. <i>In Vivo</i> Replication of ϕ 29, Cp-1, and PRD1 DNAs	174
A. Phage ϕ 29	174
B. Phage Cp-1	175
C. Phage PRD1	175
VII. <i>In Vitro</i> Replication of ϕ 29, Cp-1, and PRD1 DNAs: Initiation Reaction	175
A. Formation of a Covalent Complex between the Terminal Protein and 5' dAMP in ϕ 29 and M2	175
B. Formation of a Covalent Complex between the Terminal Protein and 5' dAMP in Phage Cp-1	176
C. Formation of a Covalent Complex between the Terminal Protein and 5' dGMP in Phage PRD1	176
VIII. Purification and Characterization of the ϕ 29 Proteins p2, p3, p5, and p6, Involved in DNA Replication	177
A. Purification of Protein p2: Characterization of DNA Polymerase and 3' $\rightarrow$ 5' Exonuclease Activities	177
B. Purification of Protein p3	178
C. Activity of Purified Proteins p2 and p3 in the Formation of the p3-dAMP Initiation Complex and Its Further Elongation	178

D. Effect of Aphidicolin and Nucleotide Analogues on the $\phi 29$ DNA Polymerase	178
E. Isolation of Mutants of Protein p3 by <i>in Vitro</i> Mutagenesis of Gene 3: Effect of the Mutations on the <i>in Vitro</i> Formation of the Initiation Complex	179
F. Purification and Characterization of Protein p6	180
G. Purification and Characterization of Protein p5	181
IX. Template Requirements for the Formation of the Initiation Complex	181
X. Possible Role of the Inverted Terminal Repeat in the Replication of $\phi 29$, Cp-1, and PRD1 DNAs	183
XI. Model for the Protein-Primed Replication of $\phi 29$	184
XII. Role of the Parental Terminal Protein in $\phi 29$ DNA Packaging	185
XIII. Protein-Primed Initiation of Replication: A General Mechanism	185
References	186

Chapter 6

Phage Mu

Rasika M. Harshey

I. Introduction	193
II. Virion Morphology	194
III. Physical and Genetic Structure of Mu DNA	194
A. The α Region	198
B. The G Segment	199
C. The β Region	199
IV. Life Cycle	199
A. Infection/Integration	199
B. Lysis-Lysogeny Decision	203
C. Lytic Growth	205
V. Transposition	211
VI. Excision	216
VII. G Inversion	217
VIII. The <i>mom</i> Gene	220
IX. Mu-like Phages	222
X. Perspectives	223
References	224

Chapter 7

Bacteriophage T1

Henry Drexler

I. Background	235
II. Basic Characteristics and Methods of Study	236

III. The Virus Particle	237
IV. The T1 Map	237
V. Phage Development	243
A. Adsorption	243
B. DNA Replication	243
C. Protein and mRNA Synthesis	246
D. Maturation	249
VI. Miscellaneous	251
A. Restriction and Modification	251
B. Coinfection and Exclusion	252
C. Transduction	253
VII. Summary	254
References	255

Chapter 8

The T7 Group

Rudolf Hausmann

I. Introduction	259
II. The T7 Prototype	260
A. The T7 Virion	260
B. The T7 Growth Cycle	262
III. The T7 Relatives	270
A. T7 Relatives Growing on <i>E. coli</i> B	270
B. T7 Relatives Growing on <i>E. coli</i> Strains Other Than B	273
C. T7-Related Phages with Non- <i>E. coli</i> Enterobacterial Hosts	275
D. T7-Related Phages for Nonenterobacterial Strains	277
IV. Further Comparisons and General Remarks	279
References	283

Chapter 9

Bacteriophage P1

Michael B. Yarmolinsky and Nat Sternberg

I. Introduction	291
II. Physical and Genetic Structure	295
A. Phage Particles	295
1. Morphology	295
2. Buoyant Density	298
3. Viral Proteins	299
4. Viral DNA	299
B. Transducing Particles	301
C. Prophages	301
1. Size and Copy Number	301
2. Localization: Plasmid and Integrated States	303
3. Genome Organization	306

III. Adsorption and Injection	307
A. The Receptor	307
B. Host Range Extension	310
C. Recombinational Control of Host Range: The <i>cix-cin</i> System	312
1. Organization of <i>cix-cin</i> and Homologies with Other Systems	312
2. Enhancer-Mediated Bacterial Control of Inversion ...	316
3. Potential Autoregulatory Circuits in Inversion	317
4. A Physiological Consequence of the Frequency of C and G Segment Inversion	318
D. Injection	319
IV. Cyclization	319
A. The Need for Cyclization	319
B. <i>lox-cre</i> -Mediated Site-Specific Recombination	320
1. Organization of the <i>lox-cre</i> System	320
2. Mechanism of <i>lox-cre</i> Recombination	321
3. Role of <i>lox-cre</i> Recombination in the Cyclization of P1 DNA	322
C. Alternative Modes of Cyclizing P1 DNA	324
V. Restriction-Modification	326
A. Organization and Function of the Restriction-Modification Genes	326
B. The P1 Restriction and Modification Enzyme and Its Mode of Action	327
C. Timing of Restriction and Modification following P1 Infection	329
D. Defense against Restriction (<i>darA</i> and <i>darB</i>)	331
VI. Lysogenization versus Lytic Growth: Immunity and Virulence	332
A. Physiological Influences on the Decision Process	332
B. The Bipartite Nature of the Immunity System	333
C. The Tripartite Nature of the Immunity System	338
D. A Closer Look at <i>immC</i>	340
1. A Multiplicity of <i>cI</i> Protein-Binding Sites in the P1 Genome	340
2. Genes and Regulatory Elements in <i>immC</i>	342
3. The Regulation of <i>cI</i> Repressor	344
E. A Closer Look at <i>immI</i>	346
F. Bacterial Functions Implicated in Lysogenization	349
VII. The Prophage State	350
A. General Considerations	350
1. The Extent of Prophage Genome Expression	350
2. Relation of Plasmid Incompatibility to Mechanisms of Maintenance	351
3. Localization of P1 <i>inc</i> Determinants	352
B. Plasmid Replication and Its Control	355

1. Organization of the R Replicon	355
2. Replication Control	361
3. Alternative Replicons	364
4. Host Participation in Plasmid Replication	366
5. Plasmid Participation in Control of Its Host	369
C. Plasmid Partition and Its Control	371
1. Organization of the <i>par</i> Region	371
2. Mode of Action and Control of the <i>par</i> Region	373
3. A Role for Site-Specific Recombination	375
4. Host Participation in Plasmid Partitioning	376
VIII. Vegetative Growth	377
A. Organization of the Genes for Vegetative Functions	377
1. Early Genes	377
2. Late Genes	378
B. Vegetative Replication	379
1. The Nature of Vegetative Replication	379
2. The Nature of the Lytic Replicon(s)	380
3. Host Functions and Their P1-Determined Analogues in Vegetative Replication	382
C. Regulation and Timing of Gene Expression	384
1. Expression of Vegetative Functions in the Prophage State	384
2. Replicative Induction of Early Vegetative Functions: A Model	385
3. Control of Late Vegetative Functions	386
D. Morphogenesis	387
1. Head Morphogenesis	387
2. Tail Morphogenesis	389
E. DNA Packaging and Cleavage of the P1 <i>pac</i> Site	389
1. Processive Headful Packaging	389
2. Localization of <i>pac</i> and <i>pac</i> -Cleavage Functions	391
3. Regulation of <i>pac</i> Cleavage	393
IX. Transduction	395
A. Specialized Transduction	395
1. Modes of Integrative Recombination	396
2. IS1-Mediated Generation of a Specialized Transducing Phage: <i>PlargF</i>	399
B. Generalized Transduction	401
1. Formation of Generalized Transducing Particles	401
2. Alternative Fates of Transducing DNA in the Recipient	406
3. The Physiology of Bacterial Recipients of Transducing DNA	409
X. Comparative Biology	410
A. P1, the Plasmid	411
B. P1, the Phage	414
C. P1, the Pastiche	416

D. Coda	417
References	418

Chapter 10

Bacteriophage T5 and Related Phages

D. James McCorquodale and Huber R. Warner

I. Introduction	439
A. Phage Structure	440
B. DNA Structure	441
C. The Replication Cycle	442
II. The Genetic and Physical Map	442
A. Pre-Early Genes	443
B. Early Genes	448
C. Late Genes	451
III. Phage Attachment and DNA Injection	453
A. Adsorption to Host Cells	453
B. Injection of Parental DNA	454
IV. Transcription	456
A. Temporal Pattern of Transcription	456
B. Transcription Maps	457
C. Promoters	459
D. Coupled Transcription and Replication	460
V. Effects on Host Metabolism	461
A. Host DNA Degradation	461
B. Synthesis of Host Macromolecules	462
C. Inhibition of Host Enzymes	462
VI. Nucleotide Metabolism	465
A. Induction of New Enzymes	465
B. 5'-Deoxyribonucleotidase	467
C. Reduction of Ribonucleotides	467
D. Synthesis of dTTP	468
VII. DNA Replication	469
References	470

Chapter 11

Bacteriophage SPO1

Charles Stewart

I. Introduction	477
II. The Virion	477
III. Other hmUra-Containing <i>B. subtilis</i> Phages	478
IV. Maps of the SPO1 Genome	478
V. Regulation of SPO1 Gene Action	484

A. Sequential Modifications of RNA Polymerase	484
B. Additional Complexities in the Regulation of Gene Action	492
VI. Shutoff of Host Activities	501
A. Introduction	501
B. Host DNA Synthesis	501
C. Host RNA and Protein Synthesis	502
D. Shutoff Genes	502
VII. SPO1 DNA Replication	502
A. Gene Products Involved in Replication	502
B. Structure of Replicating DNA	504
C. Regulation of Replication	505
D. Two Clusters of Replication Genes	506
E. 2C Replication	506
VIII. Late Functions	507
A. Lysis	507
B. Morphogenesis	507
IX. Miscellaneous Functions	507
A. Adsorption and Penetration	507
B. Transfection	508
C. Recombination	508
X. Summary	509
References	509

Chapter 12

Viruses of Archaeobacteria

*Wolfram Zillig, Wolf-Dieter Reiter, Peter Palm, Felix Gropp,
Horst Neumann, and Michael Rettenberger*

I. Introduction	517
II. Viruses of Extremely Halophilic and Methanogenic Archaeobacteria	519
A. Origin	519
B. Morphology	521
C. DNA	521
D. Proteins	521
E. Ion Requirements	521
F. Phage-Host Relationships	521
G. Molecular Biology of Halobacteriophage Φ H	524
H. Evolution of Phages of Halobacteria and Methanogens ..	532
I. Viruslike Particle from <i>Methanococcus</i> sp.	532
III. Viruses of Extremely Thermophilic, Sulfur-Dependent Archaeobacteria	533
A. Viruslike Particle of <i>Pyrococcus woesei</i>	533

B. The <i>Thermoproteus tenax</i> Viruses TTV 1, 2, 3, and 4 ...	534
C. Viruses of Sulfolobales	543
References	555

Chapter 13

Temperate Bacteriophages of *Bacillus subtilis*

Stanley A. Zahler

I. Introduction	559
II. Group I Phages: ϕ 105, ρ 6, ρ 10, ρ 14	561
A. General Description	561
B. The Lytic Cycle	564
C. ϕ 105 "Repressor" Activity	565
D. <i>In vivo</i> Specialized Transduction by ϕ 105	567
E. ϕ 105 and ρ 14 as Cloning Vehicles	567
III. Group II Phage: SPO2	569
A. Relationship to ϕ 105	569
B. Characteristics of SPO2	570
IV. Group III Phages: ϕ 3T, SP β , ρ 11, SPR, Z, IG1, IG3, IG4, and H2	571
A. General Description	571
B. Isolation	572
C. Phage Immunity; Chromosome Attachment Sites	573
D. Host Range and Serology	574
E. Betacin Production	575
F. Thymidylate Synthetase	575
G. Other Mutations of Group III Phages	576
H. DNA Methyltransferases	577
I. Specialized Transduction	579
J. Cloning in Group III Phages	580
V. Group IV Phage: SP16	581
VI. Group V Defective Phages: PBSX, PBSZ, <i>et al.</i>	582
References	584
