Chapter 1

Biology of the Bacteriophage ϕ X174

Masaki Hayashi, Akira Aoyama, Delwood L. Richardson Jr., and
Marie N. Hayashi

I. Introduction	1
II. Background	2
A. The Genomes	2
B. The Genes	2
C. Genetic Map	4
D. Outline of the Infection Process	5
E. Gene Expression	7
III. Phage Structure	9
A. The 114S Particle	9
B. The 132S Particle	12
IV. Infection	13
A. Host Requirements	13
B. Attachment	14
C. Eclipse	16
D. DNA Penetration	18
V. DNA Synthesis and Packaging	19
A. Stage I (SS $\rightarrow$ RF)	19
B. Stage II (RF $\rightarrow$ RF)	26
C. Stage III (RF $\rightarrow$ SS/Phage)	33
D. Mechanism of Conversion from Stage II Replication to Stage III Replication	38
E. Structure and Morphogenesis of Prohead	40
VI. Gene Expression	43
A. RNA Polymerase-Binding Sites of RF DNA	43
B. Minicells	44
C. Mutation at Ribosome-Binding Site	44

D. Transcription Termination	45
E. Mutations around the T ₁ Site	46
F. Cloning of mRNA Stabilizing Sequences	47
G. Expression of Overlapping Genes	49
VII. Lysis	52
VIII. Effects of Φ X174 Genes on Host Bacterial Cells	53
A. Gene A*	53
B. Other Genes	54
IX. Concluding Remarks	54
References	55

Chapter 2

The P2-like Phages and Their Parasite, P4

L. Elizabeth Bertani and Erich W. Six

I. Introduction	73
A. Origin and Distribution of the P2-like Phages	73
B. Phage P4	74
C. Special Features	74
D. Scope of This Review	75
II. The Virions	75
A. Morphology	75
B. Virion Proteins	77
C. Structure of the DNA	78
D. Arrangement of DNA in the Particles	79
III. The Genomes	79
A. Deletions and Insertions	79
B. Genetic Organization	82
C. Hybrids, Plasmids, and Phasmids	87
IV. Life Cycles of P2-like Phages	90
A. Replication	90
B. Morphogenesis, Packaging, and Lysis	92
C. Regulation	95
D. The Prophage	100
E. Recombination	107
V. The Life Cycle of Phage P4	108
A. Replication	108
B. Morphogenesis, Packaging, and Lysis	110
C. Regulation	112
D. P4 Effects on Helper	114
E. Helper Effects on P4	118
F. The Prophage	119
G. Recombination	125
H. P4 as a Cloning Vehicle	125

45	VI. Appendixes	127
46	A. Physical Maps of Selected Restriction Sites and Other	
47	Features of P2 and 186	127
49	B. Selected Sequences	129
52	References	134

Chapter 3

Strategies of Bacteriophage DNA Replication

France Keppel, Olivier Fayet, and Costa Georgopoulos

73	I. Introduction	145
73	A. Replication Control	146
74	B. Temperate versus Lytic Bacteriophages	147
74	C. Circular versus Linear Genomes	148
75	D. DNA Modification	149
75	E. Role of RNA Transcription	150
75	F. Redundant Protein Functions	150
77	G. One Gene, Two Polypeptides	151
78	H. <i>Cis</i> -Acting Replication Proteins	152
79	I. Conservation of Replication Proteins	152
79	J. Building of "Replication Machines"	153
82	K. Multifunctional Proteins	153
87	II. Replication of Single-Stranded DNA Molecule	
90	Bacteriophages M13, fd, fl, G4, and ϕ X174	154
90	A. General Considerations	154
92	B. Complementary Strand Synthesis	157
95	C. DNA Structures at the Origin	160
00	D. Nucleases Involved in Viral Strand Synthesis	161
07	E. Viral Strand Synthesis	162
08	F. DNA Sequences at the Origin	164
08	III. Replication of Circular Double-Stranded Bacteriophages	166
10	A. Bacteriophage λ	166
12	B. Bacteriophage P1	181
14	C. Bacteriophage P4	187
18	IV. Replication of Double-Stranded Linear Bacteriophages	191
19	A. Replication of DNA Molecules with Terminal Repeats	
25	and Internal Origins	191
25	B. Replication through Initiation at the Ends	218
	C. Replication via Transposition in the Host Chromosome:	
	Bacteriophage Mu	226
	References	236

*Chapter 4***Regulation of Phage Gene Expression by Termination and Antitermination of Transcription***David I. Friedman*

I. Introduction	263
II. Coliphage Lambda	264
A. A General Primer	264
B. The Lambdoid Phages	267
C. The N Antitermination Protein	268
D. Host Factors	271
E. The Nut Site	285
F. A Model of N Action	295
G. The Q Transcription Antitermination Function	297
H. Retroregulation	300
I. Contraantitermination	301
III. P2 Phages and Satellite Phage P4	303
A. P2	303
B. Phage 186	304
C. Satellite Phage P4	304
IV. Conclusions	306
References	309

*Chapter 5***DNA Packaging in dsDNA Bacteriophages***Lindsay W. Black*

I. Introduction	321
II. Energetics and Mechanism of DNA Translocation	323
A. Early Models of DNA Translocation	324
B. Prohead Expansion in Packaging	326
C. ATP-Driven DNA Translocation Models	328
D. Functions of the Packaging Components	329
E. Relationship of Packaging to DNA Ejection	333
III. Structure of Packaged Phage DNA	334
IV. Terminase and Headful Cutting of Concatemeric DNA in Packaging	344
A. Phages with Unique Ends	347
B. Phages with <i>pac</i> Site Cutting	350
C. Phages with Non-Sequence-Specific Cutting of Concatemeric DNA	353
D. Phages Packaging Nonconcatemeric dsDNA	353
E. Common Features of DNA Maturation Processes	355

V. Interactions of DNA Packaging with Other DNA Processes <i>in Vivo</i> , and DNA Structural Requirements for Packaging ..	358
A. Interactions <i>in Vivo</i>	359
B. DNA Structural Requirements for Packaging	360
VI. Conclusions	362
References	363

Chapter 6

Filamentous Bacteriophage

Peter Model and Marjorie Russel

I. Introduction	375
II. Genes and Proteins	379
A. General	380
B. Structural Genes and Proteins	382
C. DNA Metabolism Genes and Proteins	385
D. Morphogenetic Genes and Proteins	390
III. Virion Structure	392
A. Composition	392
B. Properties	393
C. Dissociation	395
IV. Infection	396
A. Adsorption	396
B. Entry	398
V. DNA Replication	401
A. Complementary Strand Synthesis	402
B. Synthesis of the (+) Strand	404
C. <i>In Vitro</i> DNA Synthesis	405
D. Single-Strand Synthesis	408
E. Structure and Function of the (-) Strand Origin	409
F. Structure and Function of the (+) Strand Origin	411
VI. Expression of the <i>fl</i> Genes	413
A. Transcription	413
B. Translation	417
VII. Morphogenesis	420
A. The Single-Stranded DNA-Gene V Protein Complex ..	420
B. Membrane Association of Virion Proteins	421
C. Assembly	424
VIII. Genetics and Physiology	429
A. Control of Gene Expression	429
B. Restriction and Modification	432
C. Recombination	433
D. Defective Interfering Particles	434

E. Lysogeny	436
F. Filamentous Phages as Cloning Vectors	437
IX. Other Reviews and Conclusions	438
A. Other Reviews	438
B. Conclusions	439
References	439

Chapter 7

Bacteriophage N4

Diane R. Kiino and Lucia B. Rothman-Denes

I. Introduction	457
II. The Virion	457
III. The Genome	458
IV. N4 Adsorption	459
V. N4 Growth Cycle	460
A. Early Events	460
B. Intermediate Events	460
C. Late Events	460
VI. N4 Transcription	461
A. Early Transcription	461
B. Middle Transcription	465
C. Late Transcription	466
VII. N4 Replication	468
VIII. N4 Genetics	470
IX. Prospects	471
References	472

Chapter 8

Lipid-Containing Bacteriophages

Leonard Mindich and Dennis H. Bamford

I. Introduction	475
II. Bacteriophage $\phi 6$	477
A. Life Cycle	477
B. Structure of the Virion	480
C. Genetics and Molecular Cloning of the $\phi 6$ Genome	489
D. Entry of Bacteriophage $\phi 6$	498
E. Transcription and Replication of $\phi 6$ RNA	500
III. PRD1-Type Phages	505
A. Introduction	505
B. Protein Localization and Particle Disruption	508

C. Genetics and Cloning	510
D. Assembly of PRD1	512
IV. Morphogenetic Proteins in Phage Membrane Assembly	515
References	516

Chapter 9

Phage T4 Structure and Metabolism

Gisela Mosig and Fred Eiserling

I. Introduction and Overview	521
A. History	521
B. The Genome	534
C. The Life Cycle	534
D. "Unnecessary" Complexities?	537
II. Structure and Initiation of Infection	538
III. Regulation of Transcription	542
IV. Posttranscriptional Controls	548
A. T4-Evoked Modifications of Ribosomes	549
B. Translational Repressors	549
C. Sequestering the Ribosome-Binding Site in Double-Stranded RNA	552
D. RNA Processing	552
E. RNA Degradation	556
F. Introns in T4 Transcripts	556
V. Modification and Restriction of T4 DNA	557
VI. DNA Replication and Recombination	560
A. Overview of Replication <i>in Vivo</i>	560
B. Genetics of "Primary" Origin Initiation	563
C. Physiology of Tertiary Initiation	569
D. Genetics of Recombination-Dependent (Secondary) Initiation	570
E. Biochemistry of Replication Proteins	572
VII. DNA Packaging	574
VIII. Virion Structure and Assembly	574
A. Head Structure and Assembly	575
B. Size Determination	578
C. <i>In Vitro</i> Assembly	580
D. Tail Structure and Assembly	581
E. The Baseplate and Tube: Structure and Assembly	583
F. Tail Fiber Structure and Assembly	585
IX. Outlook	586
References	589

Chapter 10

Phages of Cyanobacteria*Eugene Martin and Randall Benson*

I. Introduction	607
II. Genetics	618
A. Nucleic Acids and Their Synthesis in Cyanophage- Infected Cells	618
B. Lysogeny with Emphasis on Filamentous Cyanobacteria	624
C. Mutagenic Agents	626
III. Physiology	629
A. Cation Requirements and the Adsorption of Cyanophages to Host Cells	629
B. Metabolite Incorporation	632
C. Host Metabolism and Cyanophage Replication	632
IV. Ecology	635
A. Cyanophage Control of Cyanobacterial Blooms	635
B. Cyanobacterial-Cyanophage Interactions in Continuous Culture	638
C. Use of Cyanobacterial-Cyanophage Systems to Bioassay Pesticides	639
V. Concluding Remarks	640
References	640

Chapter 11

Bacteriophage P22*Anthony R. Poteete*

I. Introduction	647
II. Life Cycle	648
A. Lytic Growth	648
B. Lysogeny	652
C. Genetic Plasticity	655
III. Genetic Structure and Function	656
A. Site-Specific Recombination System	658
B. Homologous Recombination Functions	659
C. Other P_L Operon Genes	662
D. Early Transcriptional Regulation	664
E. Repressor and Its Control	664
F. Cro	669
G. cI	670
H. DNA Replication Genes	671
I. Late-Transcriptional Regulation	672

J. Lysis Genes	672
K. DNA Packaging Initiation Site (<i>pac</i>)	673
L. Head Genes	674
M. <i>immI</i> Genes	674
N. Tail Gene	677
References	677

Chapter 12

Bacteriophage Gene Products That Cause Human Disease

William R. Bishai and John R. Murphy

I. Introduction	683
II. Diphtheria Toxin	684
A. Diphtheria	684
B. Bacterial Host	685
C. Corynebacterium β	685
D. Other Corynebacteria	689
E. Regulation of <i>tox</i> Expression	692
F. Diphtheria Toxin Structure and Function	693
G. Targeting Diphtheria Toxin-Related Hybrid Proteins to Cancer Cells	696
III. Botulinum Toxin	697
A. Botulism	697
B. Bacterial Host	698
C. Converting Bacteriophages of <i>C. botulinum</i>	699
D. Botulinum Toxin Structure and Function	700
IV. Streptococcal Pyrogenic Exotoxins	702
A. Scarlet Fever	702
B. <i>Streptococcus pyogenes</i> and Its Toxins	702
C. SPE-Converting Bacteriophages	703
D. Structure and Function of the SPEs	705
V. Staphylococcal Enterotoxins	705
A. Staphylococcal Food Poisoning	705
B. <i>Staphylococcus aureus</i> and Its Toxins	706
C. SE-Converting Bacteriophages	706
D. Structure and Function of the SEs	708
VI. Shiga-like Toxins of <i>Escherichia coli</i>	709
A. <i>E. coli</i> -Induced Enteric Diseases	709
B. SLT-Converting Coliphages	710
C. Regulation of Toxin Expression	711
D. Structure and Function of the SLTs	711
VII. Concluding Remarks	712
References	715

Chapter 13

Structure and Function of the Transcription Activator Protein cII and Its Regulatory Signals*Yen Sen Ho and Martin Rosenberg*

I. Introduction	725
II. cII-Regulated Promoter Signals	727
III. Physical, Chemical, and Functional Characterization of Purified cII Protein	728
IV. Sequence-Specific DNA Binding	731
V. Domain Analysis of cII Protein	735
A. The Amino-Terminal Domain: Amino Acid Residues 2-8	738
B. The Oligomerization Domains: Amino Acid Residues 9-25 and 46-71	738
C. The DNA-Binding Domain: Amino Acid Residues 26-45	744
D. The Carboxyterminal Domain: Amino Acid Residues 72-97	748
VI. Cross-Reactivity of λ cII and P22 C1 Proteins on Promoter Signals from λ , P22, and i21 Phages	749
VII. Control of cII Degradation	752
References	754
