

Contents

Chapter 1

Introduction	1
---------------------------	----------

Michael F. Tuite and Stephen G. Oliver

Chapter 2

Structural Biochemistry	5
--------------------------------------	----------

C. Kreutzfeldt and W. Witt

1. Introduction	5
2. Basic Macromolecules in <i>Saccharomyces</i>	5
2.1. Proteins and Peptides	5
2.2. Polysaccharides, Structural Mannoprotein, and Polyphosphate	15
2.3. Lipids	17
2.4. Ribonucleic Acids	19
3. Cell Structure	23
3.1. Cell Envelope	23
3.2. Vacuoles	27
3.3. Endoplasmic Reticulum and Secretory and Endocytic Apparatus	28
3.4. Mitochondria	30
4. Life Cycle	32
4.1. Mating	33
4.2. Meiosis and Sporulation	34
4.3. Vegetative Growth	36
5. Cell Fractionation	39
5.1. Isolation of Organelles	40
5.2. Identification of Yeast Cell Subfractions	43
5.3. Autolytic Enzymes in Yeast Cells	43
6. Methods of Synchronization	44

6.1. Imposition of a Cell Cycle Block	44
6.2. Centrifugational Methods	44
References	45

Chapter 3

Metabolism and Biosynthesis	59
--	-----------

J. R. Dickinson

1. Introduction	59
2. Outline of Carbohydrate Metabolism	60
2.1. Catabolite Repression	60
2.2. Catabolite Inactivation	61
2.3. Effect of Oxygen	62
2.4. The Pasteur Effect	62
2.5. Catabolite Conversion	63
2.6. Molecular Genetics of Carbon Metabolism	66
3. Outline of Nitrogen Metabolism	66
3.1. Amino Acid Biosynthesis	66
3.2. Proteases	67
3.3. Nucleotide Metabolism	70
3.4. Molecular Genetics of Nitrogen Metabolism	74
4. Transport of Substrates into the Cell	74
5. Regulation of Metabolism	80
5.1. Genetic Studies	80
5.2. Physiological and Biochemical Studies	83
5.3. Further Aspects of Regulation	87
6. Concluding Remarks	88
References	89

Chapter 4

Methods in Classical Genetics	101
--	------------

R. B. Wickner

1. Introduction	101
2. Life Cycle of <i>Saccharomyces Cerevisiae</i>	101
3. Tetrad Analysis	105
4. Aneuploidy	112
5. Mutant Induction and Isolation	115

5.1. Mutagenesis	115
5.2. Mutant Isolation	115
6. Genetic Mapping Methods	116
6.1. Meiotic Mapping	116
6.2. Mitotic Recombination	118
6.3. Aneuploid Methods	119
6.4. The <i>spo11</i> Mapping Method	120
6.5. Chromosome-Loss Methods	121
6.6. 2- μ m DNA Mapping	121
6.7. Overall Mapping Strategies	122
6.8. The Genetic Map	122
7. Non-Mendelian Genetics	123
7.1. The Mitochondrial Genome	123
7.2. The Killer Systems	132
7.3. 2- μ m DNA	138
8. Appendix I: Media	138
9. Appendix II: Sample Tetrad Data	140
References	144

Chapter 5

Recombinant DNA Techniques 149

A. J. Kingsman, E. J. Mellor, M. J. Dobson, and S. M. Kingsman

1. Introduction	149
2. Yeast Transformation	150
3. Plasmid Vectors	150
3.1. ARS-Based Plasmids	151
3.2. 2- μ m-Based Plasmids	151
3.3. Yeast Gene Isolation Using Plasmid Vectors	152
3.4. Site-Directed Mutagenesis in Yeast Using Single-Stranded Plasmids	153
4. Minichromosome Vectors	154
5. YAC Cloning Vectors	154
6. Integrative Systems	156
6.1. Targeted Integration	157
6.2. Allelic Rescue	158
6.3. Gene Disruption	160
6.4. Refinements of Transplacement	163
7. Selection Systems	165
References	166

Chapter 6

Expression of Heterologous Genes 169

Michael F. Tuite

1.	Introduction	169
2.	Introduction of Heterologous DNA into Yeast	171
2.1.	Basic Cloning Technology	171
2.2.	Basic Vector Design	171
3.	Transcription of Heterologous Genes	173
3.1.	The Problem of Introns	173
3.2.	Encoded Pre-Pro Sequences	174
3.3.	Transcriptional Promoters	176
3.4.	Termination of Transcription	179
3.5.	Regulated Promoters	180
4.	Translation of Heterologous mRNAs	182
4.1.	Codon Bias	182
4.2.	5' Untranslated mRNA Leader	184
4.3.	AUG Context	185
5.	Posttranslational Modifications	186
5.1.	Yeast Secretion Pathway	186
5.2.	Use of Heterologous Signal Sequences	187
5.3.	Homologous Signal Sequences	189
5.4.	Posttranslational Modification and Secretion	191
5.5.	Other Posttranslational Modification Events	192
6.	Maximizing Product Yield	193
6.1.	Stability of Recombinant Plasmids in Yeast	195
6.2.	Host Strains for Heterologous Gene Expression	200
7.	Summary and Prospects	202
	References	205

Chapter 7

"Classical" Yeast Biotechnology 213

Stephen G. Oliver

1.	History	213
2.	Baking	213
3.	Beer Brewing	215
4.	Sake Brewing	224
5.	Wine Making	228
5.1.	White Wine Production	229

5.2. Red Wine Production	230
6. Strain Development	231
7. Ethanol Tolerance	231
8. Flocculation	236
9. Polysaccharide Utilization	237
10. Rare Mating	238
11. Protoplast Fusion	239
12. Recombinant DNA Technology	240
12.1. Cloning and Expression in Yeast of Genes Encoding Amylolytic Enzymes	240
12.2. Cloning and Expression of Endoglucanase Genes in Yeast	242
12.3. Cloning and Expression of Complete Metabolic Pathways: The Way Ahead	243
References	243

Chapter 8

Culture Systems	249
------------------------------	-----

T. M. Matthews and C. Webb

1. Introduction	249
2. Nutritional Requirements of <i>Saccharomyces</i>	250
2.1. Carbon	250
2.2. Nitrogen	250
2.3. Phosphorus	252
2.4. Sulfur	252
2.5. Trace Elements	253
2.6. Growth Factors	253
3. Process Variables that Influence the Growth of <i>Saccharomyces</i>	254
3.1. Hydrogen Ion Concentration	254
3.2. Temperature and Ethanol Inhibition Effects	255
3.3. Dissolved Oxygen and Substrate Inhibition Effects ...	256
3.4. Carbon Dioxide	257
4. The Theory and Practice of Yeast Culture Systems	258
4.1. Batch Systems	258
4.2. Continuous Systems	262
4.3. Practical Continuous Culture Systems	266
5. Monitoring the Growth of <i>Saccharomyces</i>	271
6. Cell Separation Techniques	273
7. Immobilized Cell Systems	272

7.1.	Passive Immobilization	272
7.2.	Active Immobilization	274
7.3.	Fermenters for Immobilized <i>Saccharomyces</i> Cells	275
8.	Downstream Processing	276
8.1.	Pressed Yeast	277
8.2.	Dried Yeast	277
8.3.	Yeast Extract	278
8.4.	Alcoholic Beverages	278
8.5.	Ethanol	278
	References	279

Chapter 9

Biochemical Techniques	283
-------------------------------------	------------

Michael F. Tuite and Stephen G. Oliver

1.	Introduction	283
2.	Cell Disruption	283
2.1.	Whole Cell Disruption	284
2.2.	Protoplast Lysis	284
3.	Radioactive Labeling of Macromolecules	286
3.1.	RNA	287
3.2.	DNA	287
3.3.	Proteins	288
4.	RNA Preparation	290
4.1.	Differential Extraction Techniques	290
4.2.	Messenger RNA	290
4.3.	Transfer RNA	291
4.4.	Ribosomal RNA	294
4.5.	Double-Stranded RNA	294
5.	DNA Preparation	295
5.1.	Chromosomal DNA	295
5.2.	Mitochondrial DNA	297
5.3.	Plasmid DNA	297
6.	<i>In vitro</i> Systems	298
6.1.	<i>In vitro</i> Transcription Systems	298
6.2.	<i>In vitro</i> Translation Systems	300
6.3.	<i>In vitro</i> DNA Synthesis	303
6.4.	Two-Dimensional Gel Electrophoresis in the Analysis of DNA Replication	306
7.	Pulsed Field Gel Electrophoresis of Yeast Chromosomes ...	307
7.1.	Theoretical Background	308

7.2. Pulsed Field Gradient Gel Electrophoresis	309
7.3. Orthogonal-Field-Alteration Gel Electrophoresis	310
7.4. Contour-Clamped Homogeneous Electric Field	311
7.5. Vertical Pulsed-Field Gradient Gel Electrophoresis and Constant Electric Field with Rotating Gel Platform	312
7.6. Field Inversion Gel Electrophoresis	312
7.7. General Considerations	313
7.8. Sample Preparations	313
References	314
