

CONTENTS

VOLUME 37

A HISTORY OF BIOCHEMISTRY

Selected Topics in the History of Biochemistry
Personal Recollections. III.

General Preface	v
Preface to Volume 37	vii
Contributors to this volume	ix
List of Plates	x
Section VI — published volumes	xi
 <i>Chapter 1. Physics and the Riddle of Life</i> by M. PERUTZ	 1
References	19
 <i>Chapter 2. An Octogenarian Looks Back</i> by ALBERT NEUBERGER	 21
Family background and early education	21
My medical career	23
University College Hospital Medical School (UCH), 1933–1939	26
My Cambridge period	27
Move to the National Institute for Medical Research	30
Move from the NIMR to St. Mary's Hospital Medical School	33
Research activities	34
Electrochemistry of amino acids and proteins	35
General aspects of protein structure	36
Glycoproteins	36
Work on amino sugars	38
Continuation of protein work	39
Peptide sequence and glycosylation	41
Further chemical and physicochemical work on amino sugars	42

Tamm-Horsfall (T-H) urinary glycoprotein	42
Experiments on the enzymatic activity of lysozyme	43
Chemistry and biochemistry of amino acids	44
Special nutritional position of threonine	45
Metabolism of glycine and serine	45
Work on tryptophan metabolism	46
Stereochemistry of hydroxyproline	46
Protein metabolism	47
Porphyrin biosynthesis	49
Porphyrin work continued at St. Mary's and Charing Cross	52
Porphyrin biosynthesis in bacterial systems	53
Aminomalonate as an inhibitor	54
γ , δ -Dioxovalerate	54
Uroporphyrinogen synthetase	55
Control of porphyrin and chlorophyll formation in <i>Rhodopseudomonas sphaeroides</i>	55
Lectins	56
General activities concerned with biomedical science	57
Principalship of the Wright Fleming Institute	58
Association with the Lister Institute of Preventive Medicine	60
Work in Research Councils and other public bodies	61
Activities in India and Israel	62
Editorial work	63
References	64
 <i>Chapter 3. Wladimir Engelhardt: the Man and the Scientist</i>	
by LEV L. KISSELEV	67
References	99
 <i>Chapter 4. Autobiographical Notes from a Nomadic Biochemist</i>	
by HERMAN M. KALCKAR	101
Introduction	101
The phosphatase-phosphatase approach to active glucose transport	104
The discovery of transphosphorylations and oxidative phosphorylation	104
The Lipmann dialogue	105

Biochemical observations made in the U.S.S.R.....	107
International Congress of Physiology in Zurich, 1938.....	108
Preparing for a Ph.D. degree in Physiology.....	108
An unanticipated special Dedication	109
My attempts to achieve transphosphorylations by the use of radioactive phosphate	109
Getting through an old ornate way of defending a degree of 'Doctor medicinae'.....	110
The Linderstrøm-Lang touch	111
England and the United States	112
California, 1939	114
The second microbiological course by Van Niel, 1939	116
From Pasadena to Saint Louis, early 1940.....	116
On my way to the Cori Lab, February 1940.....	117
Ventures in enzymology with Sidney Colowick	118
My active participation in the biochemical meetings in 1941	119
Visiting Columbia University, Biochemistry Laboratory	120
My first encounter with Lipmann's Squiggle	121
Experimental proof of myokinase catalyzing ADP dismutation.....	122
The unattractive radioisotope project on muscle	123
An attractive offer for a research associate position in New York City.....	124
Contemplating a return to Denmark.....	128
Return to Copenhagen, 1946	130
Events 1949-1952	134
More American scholars arrive in Copenhagen	136
Human galactosaemia	139
Out of the biochemistry 'stall' to a 'teach-in' against strontium-90 fallout	145
My personal encounters with developments in molecular biology	148
Preparing for U.S. Citizenship.....	151
The U-2 incident	153
My solo visit to the U.S.S.R.: June 1959	154
Preparations for my lecture in Moscow	156
Hereditary galactosaemia.....	157
To Yerevan, the Armenian Akademi NAYK	160
Some social events in Armenia	162
My future in the United States	163
Biochemical research on Massachusetts General Hospital (MGH).....	164
A new type of microbiology, 'Ektobiology'.....	165
Cellular regulation of hexose transport.....	166
My deep attachments to Copenhagen, 'The Athens of The North'	169
My home and family	171
Denmark during and after World War I.....	172

Acknowledgements	174
References	175

Chapter 5. Enzyme Regulation: from Allosteric Sites to Intracellular Behavior

by ALBERTO SOLS (†1989) Notes collected by C. CANCEDO and J.J. ARAGÓN	177
---	-----

Introduction	179
Physiological prelude in Barcelona	180
In Carl Cori's laboratory: St. Louis, 1951-1953.	181
More on sugar metabolism	189
[Establishment of an Enzymology Laboratory in Madrid: from glucose transport to the insulin induced glucokinase and other enzymes]*	
Allosteric regulation of phosphofructokinase, fructobisphosphatases and pyruvate kinases	192
[Primary regulatory enzymes]*	
Multimodulation of enzyme activity	193
Mechanism of the Pasteur effect: the allosteric sequential model	
From allosteric modulation in vitro to regulation incells; cellular en-	
zymosociology	
Pathology of enzyme regulation: search for disallosterisms	
Epilogue	
Acknowledgements	
* As originally planned by A. Sols	
References	198

Chapter 6. Jean Brachet (1909-1988)

by H. CHANTRENNE	201
References	214

Chapter 7. My Love Affair with Membranes

by ASER ROTHSTEIN	215
Introduction	215
Early times - University of British Columbia	217
Graduate School - Berkeley and Rochester	219

Desert physiology - Rochester	224
Manhattan Project - Rochester	225
The Rochester Atomic Energy Project - my initiation into administration ..	228
Academic matters - Rochester	234
Research - Rochester	236
The Hospital for Sick Children - Toronto	247
Research - Toronto	252
Perspectives on research success	255
Essential companions	257
Family matters	258
References	260

*Chapter 8. Never a Dull Moment. Peripatetics through the
Gardens of Science and Life*

by HENRYK (HEINI) EISENBERG	265
Childhood and family (1921-1939)	265
Palestine and World War II (1939-1946)	274
Hebrew University and War of Independence (1946-1948)	280
Weizmann Institute: polyelectrolytes (1948-1952)	290
Yale University: electrolytes (1952-1953)	295
Weizmann Institute: nucleic acids (1953-1958)	305
Mellon Institute: multicomponent systems (1958-1960)	317
Weizmann Institute and NIH: nucleic acids and proteins (1960-1973)	324
Current activities: chromatin and extreme halophiles (1973-1979)	336
Current thoughts (1989)	343
References	346

*Chapter 9. The Highest Grade of this Clarifying Activity has
no Limit - Confucius*

by CHEN-LU TSOU	349
From chemistry to biochemistry - days in Cambridge with David Keilin	349
Early years in Shanghai	354
Total synthesis of insulin	357
Back to enzymes	363
Lost years during the 'Cultural Revolution'	366
Kinetics of irreversible modification of enzyme activity	372

Insulin again	375
Location of the active sites of some enzymes in limited and flexible molecular regions	378
Head of a National Laboratory and years ahead	381
References	384
<i>Name Index</i>	387
