List of figures and tables vii

Preface ix

1 Precambrian life and its environment: a review	1
1.1 Theories about the origin of life and its environment	1
1.2 The Precambrian, its subdivisions, and the dating of biohistoric events	5
1.3 The preservation and recognition of organic remains in rocks: chemofossils, fossil organisms, pseudofossils	9
1.4 The cell: organization and life processes. The 'kingdoms' of organisms	13
1.5 Proterozoic fossils and environments	22
1.6 Origins and early differentiation of the Metazoa	30
 2 The Ediacarian faunal assemblages: discovery, composition, significance	 43
2.1 Discoveries at Ediacara	43
2.2 Palaeoenvironment and fossilization	47
2.3 Composition of the fauna	50
2.4 Palaeobiology	65
2.5 Other occurrences of Late Precambrian Metazoa in Australia	69
2.6 The Nama fauna of southwestern Africa (Namibia) and possible equivalents in South America	73
2.7 Late Precambrian Metazoa from the Northern Hemisphere	83
2.8 The concept of the Ediacarian fauna	100
 3 The Precambrian diversification of the Metazoa in the light of palaeozoology	 106
3.1 The significance of the Ediacarian fauna for metazoan phylogeny	106

3.2	Re-assessment of the incompleteness of the palaeontological record	108
3.3	The record of the Late Precambrian fauna applied to problems of phylogeny	110
3.4	Occupation of the marine environment: habitats and habits	127
3.5	Conclusions on the physical environments of the Late Precambrian Metazoa	130
3.6	The taxonomy of emerging diversity: the meaning of phyla	132
3.7	Rates of evolution	135
4	The Precambrian-Cambrian transition	138
4.1	Stratigraphic scales: boundaries and historical transitions	138
4.2	The fate of the Ediacarian faunas: extinction, survival, replacement	144
4.3	The Cambrian Period as the time of the first shelly fossils	149
4.4	The oldest Cambrian faunas and their evolutionary antecedents	157
4.5	Agglutinated, chitinous and mineralized body components in Ediacarian fossils and in some successors	166
4.6	Extrinsic and internal factors of biomineralization and its functional significance	169
4.7	Environmental changes at the Precambrian-Cambrian transition	174
4.8	Increase in diversity of trace fossils	180
4.9	Consequences and causes of evolutionary diversification	188
5	Emerging animal life: thoughts on interactions of lithosphere, hydrosphere, atmosphere and biosphere	195
5.1	Interactions of intrinsic and environmental factors in the emergent biosphere	195
5.2	Metazoan expansion in the marine biosphere: a three-stage process	201
5.3	Interactions in the light of plate tectonics	207
5.4	Animal life: past, present and future	211
	Appendix: Questions of language and terminology	216
	References	218
	Dictionaries of scientific terms	237
	Author index	238
	Subject index	241
