Function

Biophysical problems of small size in vertebrates

R. McN. ALEXANDER

Synopsis	3
Introduction	3
Endotherms	4
Ectotherms	6
Water loss	7
Respiration	8
Osmotic regulation	9
Digestion	9
Flight	10
Brains and eyes	10
Discussion	12
References	13

Interface areas in small fish

I. J. HARRISON

Synopsis	15
Introduction	15
Methodology	16
Body surface area	16
Gill morphometry	16
Alimentary tract morphometry	16
Renal glomerular morphometry	17
Body surface area	17
Gill morphometry	21
Alimentary tract morphometry	28
Renal glomerular morphometry	33
Glomerular size	34
Glomerular frequency	34
Total glomerular volume	37

Conclusion	39
Acknowledgements	39
References	39

Miniaturization in tetrapods: consequences for skull morphology

OLIVIER RIEPPEL

Synopsis	47
Introduction	47
Amphibia	48
Reptilia	49
Mammalia	54
Discussion and conclusions	56
Summary	58
Acknowledgements	59
References	59

Energetics and the evolution of body size in small terrestrial mammals

J. R. SPEAKMAN

Synopsis	63
Introduction	63
Theoretical models	65
Models based on surface-to-volume effects on energy demands	65
Models based on energy costs and gains	68
Empirical data	75
Conclusions	79
Acknowledgement	79
References	79

Biomechanical constraints on size in flying vertebrates

JEREMY M. V. RAYNER

Synopsis	83
Introduction	83
The size range of flying vertebrates	85
Wing design in flying animals	87
Allometry and constraints	91
Constraints on large size in birds	98
Small size in birds	99
Constraints on small size	99
Flight efficiency	100
Bounding flight	101
Hummingbirds	103

Passeriforms	105
Acknowledgements	106
References	106

Does echolocation constrain the evolution of body size in bats?

GARETH JONES

Synopsis	111
Introduction	111
Are bats miniature vertebrates?	112
General ecological theories and body size in bats	115
The niche 'grain-size' and speciation/extinction hypotheses	115
Diet, foraging strategy, and energy flow hypotheses	115
Mechanical constraints on flight performance may limit the body size of bats	116
Power required for flight and power available from flight muscles	116
Wing-loading constraints	117
Why bats echolocate and why most bats use ultrasonic calls	117
Why echolocation?	117
Why ultrasound?	118
How echolocation may constrain body size in bats	119
Echolocation call frequency may determine dietary niche breadth	119
Coupling of wingbeat and echolocation limits pulse repetition rate	122
Conclusions	123
References	124

The genetics and physiology of size reduction in mice

IAN M. HASTINGS

Synopsis	129
Introduction	129
Experiment and theory	130
The direct response to selection for reduced body size	130
Correlated responses in growth, reproductive, and behavioural characters	132
Correlated responses in physiology and biochemistry	134
The genetic basis of response	135
The relevance of these laboratory studies to other species	136
The relevance of these laboratory studies to natural populations	137
Conclusion	139
Acknowledgements	139
References	139

Speciation in small mammals**J. B. SEARLE**

Synopsis	143
Introduction	143
Ecological possibilities	144
The number of species of small mammal	145
Modes of speciation	147
Sympatric speciation	148
Parapatric speciation	149
Allopatric speciation	150
Peripatric speciation	151
Conclusions	152
Acknowledgements	154
References	154

Ecology**Miniature mammals: life-history strategies and macroevolution****ANDY PURVIS & PAUL H. HARVEY**

Synopsis	159
Introduction: miniature mammals	159
Allometry of life-history variables	161
Beyond allometry	162
Charnov's model of life-history evolution	163
Brown, Marquet, and Taper's model	165
Comparative methodology	167
Comparative results	168
Discussion	171
Acknowledgements	172
References	172

The functional ecology of small fish: some opportunities and consequences**P. J. MILLER**

Synopsis	175
Introduction	175
Habitats for small teleosts	177
Functional benefits of small size	178
Feeding	178
Surviving	178
Growing	179
Reproducing	179

Functional costs of small size	179
Feeding	179
Surviving	180
Reproducing	182
Functional responses	182
Surviving	182
Reproducing	184
Bestowal and fecundity	186
Functional interactions with mankind	190
Conclusion	192
References	192

Small size in amphibians—its ecological and evolutionary implications

B. T. CLARKE

Synopsis	201
Introduction	201
Size concepts and categories—looking for boundaries	202
Small or miniature? A problem of definition	203
Miniaturization in amphibians—features of the evolutionary process	204
A brief survey of small and miniature amphibians	205
Size classes and systematic distribution of small and miniature amphibians	205
Morphotype, lifestyle, and trends in body size reduction	211
Ecological and behavioural implications	214
Niche availability	215
Nutrition	215
Reproductive strategies	216
Water balance	217
Evolutionary implications	217
Size differences in males and females and in neighbouring populations	218
Conclusions	219
Acknowledgements	219
References	219
Appendix: notes	224

Ecology of small reptile-grade sauropsids

R. A. AVERY

Synopsis	225
Introduction	225
Body size distribution in lizards	226
The ecology of small size: do small lizard species have anything in common?	230
The ecology of small size: evolutionary dynamics of <i>Anolis</i> and <i>Cnemidophorus</i>	230
Small size in lizards: a deductive approach	231
Advantages of small size	232

Disadvantages of small size	233
Phylogenetic considerations	234
Concluding comment	234
References	235

Body size and the ecology of hummingbirds

PETER A. COTTON

Synopsis	239
Introduction	239
Physiological correlates of small size	241
Metabolic rate	241
Torpor	243
Flight	243
Reproduction and life history	245
Ecological consequences of small body size	245
Foraging	248
Plant-pollinator co-evolution	250
Community organization and body size	251
Daily activity patterns	251
Discussion	253
Acknowledgements	253
References	253

Ecology of very small terrestrial mammals

SARA CHURCHFIELD

Synopsis	259
The occurrence of miniaturism amongst terrestrial mammals	259
Examples of very small size in terrestrial mammals	261
Geographical distribution of miniature terrestrial mammals	261
Feeding habits	266
Habitat occurrence	269
Habitat utilization	271
Competition and niche separation	272
References	274

Dwarfing in island elephants and deer: processes in relation to time of isolation

A. M. LISTER

Synopsis	277
Introduction	277
First case study: deer from Jersey and Crete	278
Jersey red deer, <i>Cervus elaphus</i>	278

Cretan deer, <i>Candiacervus</i>	281
Second case study: elephants and mammoths from Siberia, California, and the Mediterranean	284
Woolly mammoths from Wrangel Island, Siberia	285
Columbian mammoths from Santa Rosa Island, California	287
Elephants from Malta, Sicily, and Cyprus	287
Further features of dwarf elephantids	288
Discussion	290
References	291

The psychology of human–small vertebrate interactions

ANNE McBRIDE

Synopsis	293
Introduction	293
Human–animal relationships	294
Human–animal bonds	295
The function of attachment	295
Assessing attachment	295
The mechanisms of attachment	296
The roles pets play	298
The surrogate function	298
The projective function	300
Pets as social facilitators	301
Animals as relaxants	302
Small vertebrate–human interactions	302
Do rodents form attachments?	302
Small vertebrate perceptions of humans	303
The effects of human interaction on experimental animals	305
Acknowledgements	306
References	306
Index	309
