

Contents

Preface, ix

1 Introduction to biogeography, 1

2 Biodiversity, 9

- Gradients of diversity, 10
- Diversity in time, 20
- References, 26

3 Patterns of distribution, 27

- Limits of distribution, 28
- Overcoming the barriers, 30
- The cosmopolitan plantain, 33
- Patterns of dragonflies, 34
- Magnolias — evolutionary relicts, 38
- Climatic relicts, 39
- Endemic organisms, 45
- Physical limitations, 47
- Environmental gradients, 48
- Interaction of factors, 55
- Species interaction, 58
- Reducing competition, 63
- Predators and prey, 67
- References, 71

4 Communities, ecosystems and biomes, 74

- The ecosystem, 75
- Nutrients in the ecosystem, 77
- Global communities, 79
- Climate diagrams, 81
- References, 107

5 The source of novelty, 110

- Natural selection, 111
- The isolating force within the organism, 115
- External isolating forces, 117
- Barriers to interbreeding, 120
- Polyploids, 121
- Evolution — a summary, 122
- Adaptations for survival, 123
- Meeting the challenge of the environment, 124
- Clines and 'rules', 126
- Competition for life, 126

- Controversies and evolutionary theory, 127
- Evolution and the human race[s], 130
- References, 132

6 Islands and oceans, 134

- Problems of access, 134
- Variety of island habitats, 136
- Problems of isolation, 136
- Hazards of island life, 138
- The Theory of Island Biogeography, 140
- The documentation of extinction, colonization and equilibrium, 143
- Second thoughts about the Theory, 147
- The Theory of Island Biogeography and the design of nature reserves, 150
- Opportunities for adaptive radiation, 150
- The Hawaiian Islands, 154
- Drawing lines in the oceans, 162
- References, 167

7 Patterns in the past, 170

- Plate tectonics, 171
- The evidence for past geographies, 175
- Changing patterns of continents, 176
- Early land life on the moving continents, 177
- One world — for a while, 182
- The early spread of mammals, 185
- The great Cretaceous extinction event, 189
- The rise of the flowering plants, 191
- Late Cretaceous and Cenozoic climatic changes, 193
- Late Cretaceous and Early Cenozoic floral changes, 195
- Towards today, 199
- References, 200

8 Patterns of life today, 202

- Mammals — the final patterns, 202
- The distribution of flowering plants today, 209
- Mammalian versus flowering plant geography — comparisons and contrasts, 210
- Australia, 216
- New Zealand, 219
- South America, 219
- The Old World tropics — Africa, India and South-East Asia, 223
- Madagascar, 228
- The Cape flora, 229
- The Northern Hemisphere — Holarctic mammals and Boreal plants, 230
- References, 234

9 Interpreting the past, 237

- Phylogenetic biogeography, 239
- Cladistic biogeography, 241

- Panbiogeography, 242
- Phyletic tracks, 244
- Endemicity and history, 245
- Pleistocene problems, 247
- Centres of dispersal, 250
- Fossils and historical biogeography, 250
- Palaeobiogeography, 251
- References, 252

10 Ice and change, 253

- Climatic wiggles, 254
- Interglacials and interstadials, 258
- Biological changes in the Pleistocene, 261
- The last glacial, 263
- Causes of glaciation, 271
- References, 275

11 From the present into the future, 277

- The current interglacial — a false start, 277
- Forests on the move, 280
- The emergence of modern humans, 286
- Modern humans and the megafaunal extinctions, 288
- Domestication and agriculture, 290
- The dry lands, 296
- Changing sea levels, 297
- Time of warmth, 300
- Climatic deterioration, 301
- The environmental impact of early human cultures, 303
- Recorded history, 305
- Current and future changes, 307
- References, 315

Index, 317
