

CONTENTS

MOLECULAR MECHANISMS OF MUTAGENESIS

<i>N. P. Dubinin</i> . Unsolved problems in the modern molecular theory of mutations	1
<i>A. S. Krivickii, L. P. Tikhomirova and V. V. Esipova</i> . The influence of chemical agents on the lethal and mutagenic effect of UV irradiation on the extracellular phage	32
<i>C. H. Clarke</i> . A study of antimutagens in the system of ochre suppressor mutations in <i>Escherichia coli</i>	37
<i>R. N. Saifer and Yu. L. Dorokhov</i> . The frequency of complete and mosaic mutations in cells of <i>Escherichia coli</i> uvr^+ and uvr^- at high doses of UV radiation	49
<i>R. N. Gerhanovich, N. V. Yurovitskaya, T. N. Bol'shakova, T. P. Saprykina and G. I. Burd</i> . Pleiotropic disturbances of biosynthetic processes in <i>Escherichia coli</i> mutants with lesions in the PEP-dependent phosphotransferase system	53
<i>R. V. Sukhodolets, T. I. Chukanova, E. S. Pukhova, Ya. V. Flyakh and G. E. Baumanis</i> . Genes controlling nucleoside metabolism in <i>Escherichia coli</i> K12.	59
<i>E. E. Pracyan</i> . The effect of mutagens on amber mutants of the bacteriophage T4B	66
<i>R. N. Krylov and T. G. Plotnikova</i> . The gene-specific suppressor <i>suA</i> in the genome of the phage T4	71
<i>E. I. Budauskii and E. D. Sverdlov</i> . The mechanism of the mutagenic action of hydroxylamine	76
<i>L. A. Pugina and N. G. Shuppe</i> . The mechanism of action of diazoketones	84
<i>A. P. Alkifer</i> . Intrachromosomal processes and the formation of chromosomal aberrations	88
<i>R. Rieger and A. Michaelis</i> . The intrachromosomal and interchromosomal distribution of chromatid aberrations induced by chemical agents: an analysis of "synthetic" karyotypes in <i>Vicia faba</i>	94
<i>C. Janion and D. Shugar</i> . The mechanism of the mutagenic effect of hydroxylamine: the effect of N-methylhydroxylamine	106
<i>R. N. Sokharov and I. A. Rapoport</i> . The effect of phenocopy-inducing compounds on the formation of puffs in <i>Drosophila melanogaster</i>	110
<i>E. P. Garina and A. I. Korytova</i> . The wave kinetics of mutagenesis and the problem of potential changes	115
<i>V. A. Shcherchenko and D. R. Pyatyshev</i> . The effect of ethylenimine and UV and gamma rays on the appearance of complete and mosaic mutations at different stages of the cell cycle of <i>Chlorella</i>	120
<i>A. M. Semebryanyi</i> . The mechanism of the mutagenic effect of N-nitroso-N-alkylurea	128
<i>A. A. Prossorov, L. S. Naumov and G. V. Savchenko</i> . Induced mutagenesis in a rec^- strain of <i>Bacillus subtilis</i>	132

<i>L. B. Mekler.</i> Viruses and the organism. The formation of hybrid genomes and the consequences to be expected at the cell, organism and population levels (a hypothesis)	135
<i>E. D. Aingorn.</i> Cytogenetic analysis of the action of inhibitors of DNA synthesis in relation to the functional activity of the genome	144
<i>A. A. Strekalov.</i> The molecular genetic analysis of hemoglobin mutants in man	146
<i>Yu. A. Mitrofanov, V. V. Otradnova and A. Z. Voskonyan.</i> Some aspects of the mechanism of chromosomal rearrangements	148
<i>G. F. Nesterova and A. A. Zapadnaya.</i> The localization of rII ^{ts} mutants induced by different mutagens	149

TRANSCRIPTION AND TRANSLATION OF GENETIC INFORMATION

<i>Ch. Kutell', A. P. Ryskov, V. L. Mant'eva, E. R. Avakyan and G. P. Georgiev.</i> Properties of newly formed D-RNA and the structure of the operon in eukaryotes	151
<i>R. B. Khesin.</i> RNA polymerase and the control of RNA synthesis	158
<i>G. A. Dvorkin, V. F. Efimova and L. I. Koganitskaya.</i> Nuclear-cytoplasmic relationships in a cell-free system containing isolated liver nuclei	173
<i>S. G. Inge-Vechtomov and V. M. Andranova.</i> A new type of supersuppressor in yeast	181
<i>V. S. Gaitskhoki and O. I. Kiselev.</i> Nuclear and mitochondrial genetic control of protein biosynthesis in mitochondria	187
<i>T. B. Kazakova, M. M. Gachava and S. A. Ermekova.</i> Regulation of the transcription of mitochondrial DNA	194
<i>R. Jayaraman and E. B. Goldberg.</i> Genetic determination of specific mRNAs of phage T4	200
<i>V. M. Zhdanov, A. F. Sito, N. L. Varich and M. I. Parfanovich.</i> Identification of the mRNA for the capsid protein of a paramyxovirus	205
<i>A. G. Bukrinskaya, G. V. Vorkunova and O. G. Nikolaeva.</i> Early and late virus-specific polyribosomes	211
<i>R. I. Salganik.</i> Regulation of transcription in animal cells	219
<i>V. G. Debabov and G. I. Klimova.</i> Interaction of rifampicin and RNA polymerase	225
<i>E. I. Golub.</i> Transcription of the prophage genome in lysogenic bacteria	229
<i>B. V. Simarov, L. N. Mironova and S. G. Inge-Vechtomov.</i> Classification of nonsense mutations in the ad ₂ locus of yeast	233
<i>Ya. Ya. Tsilinskii, B. V. Gushchin, S. M. Klimenko and D. K. L'vov.</i> Genetic interactions in populations of Venezuelan equine encephalomyelitis virus	236
<i>A. V. Mikheeva, E. Ya. Yakobson and Yu. Z. Gendon.</i> Synthesis of virus-specific structures in cells infected with ts-mutants of polio virus under non-permissive conditions	242

MOLECULAR MECHANISMS OF GENETIC RECOMBINATION

<i>S. E. Bresler.</i> DNA replication and the recombination mechanism in bacteria	244
<i>D. M. Gol'dfarb, G. I. Gol'dberg, L. S. Chernin, L. A. Gukova, I. D. Avdienko, V. N. Kuznetsova and I. Kh. Kishner.</i> The recombinant yield stimulant (RYS) produced by male strains of <i>Escherichia coli</i> K12: its nature and mechanism of action in conjugation	257
<i>M. I. Mosevitskii.</i> Structural transformations of bacteriophage DNA during replication and recombination processes	274
<i>N. I. Matvienko.</i> The nature of ultrarare recombinations	281
<i>V. V. Kushev.</i> Interpretation of intragenic recombination phenomena in terms of the principle of directional correction	285
<i>Yu. P. Vinetskii.</i> Primary recombinational events during the transformation of phage T4B	290

<i>I. I. Markov, M. S. Lobutova and V. P. Ivanov. The competence of transformation systems</i>	296
<i>L. M. Fomstein and G. G. Mnatsakanyan. The biological activity of phage T4B DNA during phage transformation</i>	302
<i>Evelyn M. Witkin. Ultraviolet-induced mutations and recombinations in bacteria</i>	309
<i>R. Desoret, M. Blanco and A. Baillonet. Escherichia coli K12 mutations leading to noninducibility of lambda prophage</i>	316
<i>I. I. Markov and V. T. Kantardzhiev. The effect of changes in the cell surface on conjugation in Escherichia coli K12</i>	324
<i>A. P. Peikhov and S. N. Rudneva. Recombination-deficient mutants of Escherichia coli K12</i>	328
<i>G. N. Rudchenko and B. N. Il'yashenko. The biological activity of isolated DNA of Escherichia coli in recipient spheroplasts</i>	333
<i>I. I. Mekshenkov and R. D. Guseinov. Interruption of the injection of the chromosome of phage T4B into the bacterial cell</i>	339

REPAIR OF DNA LESIONS

<i>V. P. Paribok and E. A. Val'dshtein. Molecular mechanisms of DNA repair</i>	344
<i>E. V. Shrestakov, V. D. Zhevner and T. N. Mitronova. Repair systems in blue-green algae: a study of mutants sensitive to inactivating factors</i>	351
<i>H. N. Soifer. The participation of repair enzymes in mutagenesis and replication</i>	357
<i>G. B. Smirnov and Yu. N. Favorskaya. The mechanism of repair of DNA lesions induced by monofunctional alkylating agents in Escherichia coli K12</i>	370
