Preface

1 Introduction: Basic Concepts of Genetics 1

Mendel's Theory of Heredity	1
Multiple Alleles	4
Genotype and Phenotype	7
Genes and Chromosomes	9
Sex-linked Heredity in Humans and Other Organisms	12
Linkage and Crossing Over	14
The Hereditary Materials	16
Transcription and Translation	18
Gene Mutations	20
Rates of Mutation	24
Chromosomal Mutations	26

2 Genetic Structure of Populations 29

Population Genetics	29
Populations and Gene Pools	29
Genetic Variation and Evolution	32
Genotypic and Genic Frequencies	33
Two Models of Population Structure	37
Looking at Variation	38
The Problem of Measuring Genetic Variation	42
Quantifying Genetic Variation	43
Box 2.1 Gel Electrophoresis	44
Polymorphism and Heterozygosity	45
Electrophoretic Estimates of Variation	50
Genetic Variation in Natural Populations	53
Problems	55

3 Processes of Evolutionary Change 58

- Evolution, a Two-Step Process 58
- Random Mating 59
- The Hardy-Weinberg Law 60
- Applications of the Hardy-Weinberg Law 63
- Sex-Linked Genes 66
- Mutation 67
- Box 3.1 *Calculation of Allele Frequencies and Approach to Equilibrium for Sex-Linked Genes* 68
- Migration 71
- Random Genetic Drift 73
- Founder Effect and Bottlenecks 78
- Problems 83

4 Natural Selection 87

- The Concept of Natural Selection 87
- Darwinian Fitness 88
- Box 4.1 *Kinds of Equilibrium* 91
- Selection Against Recessive Homozygotes 92
- Box 4.2 *Selection Against Recessive Homozygotes* 94
- Recessive Lethals 98
- Selection Against Dominants and Selection Without Dominance 100
- Selection and Mutation 102
- Estimation of Mutation Rates 105
- Heterozygote Advantage 106
- Selection Against Heterozygotes 111
- Box 4.3 *General Model of Selection at a Single Locus* 112
- Frequency-Dependent Selection 114
- Problems 117

5 Inbreeding, Coadaptation, and Geographic Differentiation 120

- The Inbreeding Coefficient 120
- Measuring Inbreeding 122
- Inbreeding Depression and Heterosis 124
- Inbreeding in Human Populations 126
- Genetic Coadaptation 130
- Linkage Disequilibrium 134
- Supergenes 136
- Box 5.1 *Random Mating with Two Loci* 137
- Inversion Polymorphisms 140
- Geographic Differentiation 143
- The Concept of Race 145
- Human Races 147
- Problems 151

6 Quantitative Characters 154

- Continuous Variation 154
- Seed Color in Wheat 157
- Polygenic Inheritance 160
- Genetic and Environmental Variation 164
- Box 6.1 *Heritability by the Twin Method* 168
- Box 6.2 *Heritability by the Mass Selection Method* 169
- Heritability in Different Populations 171
- Problems 175

7 Speciation and Macroevolution 178

- Anagenesis and Cladogenesis 178
- The Concept of Species 180
- The Process of Speciation 182
- Geographic Speciation 184
- Quantum Speciation 188
- Genetic Differentiation During Speciation 190
- Box 7.1 *Genetic Identity and Genetic Distance* 191
- Genetic Change and Phylogeny: DNA Hybridization 197
- Protein-Sequence Phylogenies 198
- Immunology and Electrophoresis 207
- Neutrality Theory of Molecular Evolution 209
- The Molecular Clock of Evolution 212
- Structural Versus Regulatory Evolution 215
- Evolution of Genome Size 219
- Problems 222

Appendix Probability and Statistics 226

- A.I Probability 226
- A.II The Chi-Square Method 228
- A.III Mean and Variance 235
- A.IV The Normal Distribution 237

Glossary 239

Bibliography 245

Answers to the Problems 251
