

Preface xvi

1. The World and Ways of *E. coli*

1

Arthur L. Koch and Moselio Schaechter

I. Prologue	1
II. Why <i>Escherichia coli</i> ?	2
III. How Growth Kinetics Can Be Used to Study Cellular Processes	4
IV. Growth Kinetics at Low Substrate Concentration	7
V. The Biology of Size and Shape	9
VI. How Does <i>E. coli</i> Keep Certain Chemicals Out and Let Others In?	11
VII. Transport through the Cytoplasmic Membrane	13
VIII. Energy Transduction	14
IX. Substrate Utilization and Its Regulation	15
X. Optimum Strategies in a Fluctuating Environment	16
XI. A Case of Starvation: Amino Acid Deprivation	19
XII. Segregating the Genome	21
XIII. Genetic Parasites	23
XIV. Epilogue	24
References	24

2. Biology of <i>Pseudomonas</i> and <i>Xanthomonas</i>	27
Norberto J. Palleroni	
I. Introduction	27
II. Taxonomy	28
III. Morphology and Cytology	34
IV. Nutrition	36
V. Metabolism	37
VI. Products of <i>Pseudomonads</i>	40
VII. Genetics	41
VIII. Plasmids, Phages, and Bacteriocins	43
IX. Serology	46
X. Pathogenicity	47
XI. Ecology and Isolation	48
References	50
3. Biology of the Bacilli	57
Lee A. Bulla and James A. Hoch	
I. Introduction	57
II. Taxonomy and Classification	58
III. Sporulation	58
IV. Spore Germination	62
V. Metabolism and Physiology	63
VI. Genetics	66
VII. Industrial Applications	73
VIII. Conclusion	76
References	76
4. Biology of Spore-Forming Anaerobes	79
J. Gregory Zeikus	
I. Introduction	79
II. General Biology	85
III. Comparative Catabolism of Solventogenesis and Acetogenesis	96
References	110
5. Glutamic Acid Bacteria	115
Shukuo Kinoshita	
I. Introduction	115
II. Classification of Glutamic Acid Bacteria	116
III. Morphology of Glutamic Acid Bacteria	117
IV. Factors Influencing Growth and Viability	119
V. Mutation and Genetic Recombination	121
VI. Carbohydrate Metabolism	126

VII. Biosynthesis and Metabolism of Amino Acids	129	
VIII. Cell Membranes	135	
IX. Substrates Other Than Carbohydrates	138	
X. Conclusion	139	
References	140	
 6. Biology of the Lactic, Acetic, and Propionic Acid Bacteria		143
Albert G. Moat		
I. Introduction	143	
II. Classification and Ecology	144	
III. Cell Structure	148	
IV. Carbohydrate Metabolism	160	
V. Fatty Acids and Lipids	171	
VI. Nutrition and Nitrogen Metabolism	174	
VII. Genetics	180	
VIII. Growth	182	
IX. Summary	184	
References	184	
 7. Methanogens		189
Meyer J. Wolin and Terry L. Miller		
I. Introduction	189	
II. Nucleotide Sequence	191	
III. Cell Shape and Physiology	192	
IV. Cell Walls and Lipids	196	
V. Nutrition	200	
VI. Biochemistry of CH ₄ Formation	202	
VII. DNA, RNA, and Protein Synthesis	207	
VIII. Biosynthetic Pathways	210	
IX. Ecosystems	214	
References	217	
 8. Biology of the Methylotrophs		223
Israel Goldberg		
I. Introduction	223	
II. Physiological Aspects of the Methylotrophs	224	
III. Carbon Metabolism	229	
IV. Energy Metabolism	238	
V. Regulation of Carbon Metabolism	245	
VI. Growth Yields of Methylotrophic Microorganisms	249	
VII. Genetics of Methylotrophs	250	
VIII. Conclusions	252	
References	252	

9. <i>Zymomonas</i> , a Unique Genus of Bacteria	261
Bland S. Montencourt	
I. Introduction	261
II. Descriptive Biology and Taxonomy	262
III. Industrially Useful Strains	264
IV. Specific Growth Conditions	266
V. Biochemistry of Glucose, Fructose, and Sucrose Utilization	272
VI. Biochemical Composition of the Cell	277
VII. Flocculation	279
VIII. Enzyme Regulation	280
IX. Genetics of <i>Zymomonas</i>	281
X. Summary and Conclusions	285
References	286
10. Biology of <i>Streptomyces</i>	291
C. F. Hirsch and P. A. McCann-McCormick	
I. Introduction	291
II. Ecology	292
III. Ultrastructure and Composition	293
IV. Physiology and Metabolism	296
V. Developmental Biology	298
VI. Genetics	305
References	308
11. Biology of Actinomycetes Not Belonging to the Genus <i>Streptomyces</i>	315
Mary P. Lechevalier and Hubert Lechevalier	
I. Introduction	315
II. Habitats and Isolation of Nonstreptomycetes	323
III. Cellular Composition	326
IV. Production of Antibiotics by Nonstreptomycetes	327
V. Metabolism and Physiology	329
VI. Genetics and Molecular Biology	343
Glossary	348
References	348
12. Taxonomy of Fungi and Biology of the <i>Aspergilli</i>	359
Joan W. Bennett	
I. Introduction	359
II. Some Systematics for the Nonmycologist	361

III. The Genus <i>Aspergillus</i>	376
IV. Genetics	384
V. Economic Aspects	389
VI. Conclusion	397
References	398
 13. The Biology of <i>Penicillium</i>	 407
John F. Peberdy	
I. Introduction	407
II. General Characteristics	408
III. Physiological Aspects of Development	411
IV. Metabolism	415
V. Genetics	422
VI. Viruses	425
VII. Concluding Remarks	426
References	426
 14. <i>Cephalosporium acremonium</i> : A β -Lactam Antibiotic-Producing Microbe	 433
Claude H. Nash, III, Rajanikant J. Mehta, and Christopher Ball	
I. Introduction	433
II. Taxonomy	434
III. Ecological Distribution	435
IV. Morphology and Subcellular Structure	435
V. Nutrition and Physiology	437
VI. Metabolism and Regulation	438
VII. Genetics	442
VIII. Conclusions	445
References	445
 15. Biology of <i>Claviceps</i>	 449
Willard A. Taber	
I. Introduction	449
II. Taxonomy	452
III. Life Cycle	454
IV. Genetics	461
V. Laboratory Cultures	463
VI. Biosynthesis	476
VII. Physiology of Production	477
Glossary	478
References	480

16. *Trichoderma*

487

Douglas E. Eveleigh

- I. Taxonomy 487
- II. Morphology 489
- III. Nutrition and Physiology 490
- IV. Physiology 492
- V. Ecology 496
- VI. Mycotoxins and Other Secondary Metabolites 500
- VII. Genetics 502
- References 504

17. The Biology of *Saccharomyces*

511

G. G. Stewart and I. Russel

- I. Introduction 511
- II. Carbohydrate Metabolism 517
- III. Amino Acid Uptake and Metabolism 521
- IV. Ethanol Tolerance 522
- V. The Cell Envelope 524
- VI. The Influence of Osmotic Pressure and Substrate Concentration on *Saccharomyces* 527
- VII. Genetics and Molecular Biology of *Saccharomyces* 530
- VIII. Conclusions 533
- References 534

18. Biology of Yeasts Other Than *Saccharomyces*

537

Herman J. Phaff

- I. *Saccharomycopsis lipolytica* 537
- II. *Hansenula polymorpha* 545
- III. *Kluyveromyces fragilis* 550
- IV. *Candida utilis* 556
- References 559
