

TABLE OF CONTENTS

Chapter 1	
Introduction	1
References	2
Chapter 2	
Apomixis and Parthenogenesis — A Historical Review	5
I. The Empirical Background	5
A. Early Observations	5
B. Mendel on Apomixis	7
C. Pioneer Work	8
D. Biosystematic and Biogeographic Observations	8
II. Early Theories for Apomixis	11
A. The Necrohormone Theory	11
B. The Hybridization Theory	11
C. Gustafsson's Monograph	13
III. Advances since Gustafsson's Monograph	14
A. Genetic Background of Apomixis	14
B. Advances in Embryology and Cytology	15
C. Techniques for Studies of Variation in Apomicts	16
D. Apomixis vs. Sexual Reproduction — Progress in General Theory	16
IV. Aspects of Apomixis	17
A. Ecological Interest in Apomicts Increases	17
B. The Evolutionary Potential of Apomicts	17
C. Plant Breeding	19
References	19
Chapter 3	
Parthenogenesis in Animals	25
I. Introduction	25
II. Classification of Animal Parthenogenesis	25
III. Artificial and Occasional (Tycho-) Parthenogenesis	26
IV. Parthenogenesis and Polyploidy in Animals	27
V. Cyclical Parthenogenesis	29
VI. Evolution of Parthenogenetic Animals	31
VII. Comparison between Apomixis and Parthenogenesis in Plants and Animals	31
References	33
Chapter 4	
Parthenogenesis, Apospory, and Apogamy in Lower Plants	37
I. Introduction	37

II.	Parthenogenesis and Related Phenomena in Algae	37
III.	Parthenogenesis in Fungi	38
IV.	Bryophytes.....	41
V.	Apospory and Apogamy in Pteridophytes	42
VI.	Possible Apomixis in Gymnosperms	45
	References.....	47

Chapter 5

	Mechanisms of Apomixis	49
I.	Sexual and Asexual Reproduction in Angiosperms.....	49
	A. Sexual Reproduction in Angiosperms	49
	B. Sexual vs. Asexual Reproduction.....	50
	C. Apomixis and Vegetative Reproduction	51
	D. Tendencies towards Apomixis	52
II.	Embryology and Cytology of Apomictic Angiosperms.....	52
	A. Subdivision and Nomenclature Used in Our Text	52
	1. Subdivision of Apomixis: Adventitious Embryony and Gametophytic Apomixis	52
	2. Embryo and Endosperm Formation	60
	3. Meiotic Disturbances in Apomicts	64
	B. On the Quagmires of Apomictic Terminology.....	65
	1. Apomixis - Three levels of Definition	65
	2. Polyembryony, Somatic Embryogenesis, and Adventitious Embryony	65
	3. Apogamy, Apogamety, Apomeiosis, Apogamogony	67
	4. Other Terms for Diplospory and Apospory	68
III.	"On the Borderline of Apomixis": Tendencies toward Apomixis in Sexual Plants, Automixis, Androgenesis, and Hemigamy	68
	A. Apomictic Tendencies in Sexual Plants.....	68
	1. "Tendencies to Agamospermy"	68
	2. Unreduced Egg Cells and Occasional "Diplosporous" Embryo Sacs in Sexual Plants....	69
	3. Aposporous Embryo Sacs in Sexual Plants	70
	4. Occasional Adventitious Embryony	70
	5. Haploid Parthenogenesis	70
	6. Matromorphy: Occasional Gametophytic Apomixis in Sexuals	72
	B. Automixis	73
	C. Androgenesis	74
	D. Hemigamy (Linguistically Incorrect "Semigamy")	75
	References.....	75

Chapter 6

How Apomixis Is Regulated	81
I. Introduction	81
II. Genetic Background of Established Apomixis — Facts, Theories, Speculations	81
A. Background	81
B. Components of Gametophytic Apomixis	82
C. Early Models for Gene Regulation	83
D. Earlier Crossing Analyses	84
E. Modern Results and Ideas	84
F. Do Obligate Apomicts Occur?	86
G. Control of Parthenogenesis — Genetical or Not?	86
H. Diplosporous Apomixis in <i>Taraxacum</i>	87
I. Some Other Viewpoints	88
III. Environmental Effects: Climatic Conditions, Influence of Chemicals, Pollination	89
A. Introduction	89
B. Temperature, Light, and Other Climatical Factors	89
C. Pollination	90
D. Chemical Treatments	91
IV. Increasing the Variation: Mutagen Treatment and Tissue Culture Studies	91
V. Mutations Influencing the Mode of Reproduction	93
VI. The Origin of Apomixis	96
VII. The Breakdown of Apomixis: Hybridization and Polyploidization	97
References	102

Chapter 7

The Interrelationship between Apomixis and Other Traits	109
I. Polyploidy	109
A. Apomixis and Polyploidy	109
B. Diploid Apomicts and Dihaploids	111
II. Hybridization	112
III. Heterozygosity/Heterosis	114
IV. Self-Incompatibility	114
V. Self-Fertilization	115
VI. Vegetative Reproduction	116
VII. Dioecy	116
VIII. Life Span	116
IX. Growth Habit	116
X. Sterility	117
References	118

Chapter 8

Variation and Evolution of Apomicts	121
I. The Evolutionary Potential of Apomicts	121
A. The Theory of Lack of Variation	121
B. Accepting Genetic Variation in Apomicts	121
1. Generation of Variability in Apomicts	121
2. Evolutionary Prospects	123
II. Empirical Studies	124
A. Biometrics	124
B. Biochemical Studies of Variation: DNA, Allozymes, Secondary Compounds	126
1. DNA Studies	126
2. Allozyme Studies	127
3. Secondary Compounds	129
III. Further Aspects of Evolutionary Potential	129
A. Intraindividual Selection	129
B. Phenotypic Plasticity	132
C. Recombination and DNA Repair	132
D. The Speciation Rate	132
E. Sex as a Cohesive Force	133
IV. Empirical Records	133
V. Conclusion	134
References	135

Chapter 9

Taxonomic Considerations	139
I. Taxonomy — The Problem with Classification	139
A. Introduction	139
B. Species Concepts	144
1. The Biological Species	144
2. The Phenetic Species	145
3. Species as Evolutionary or Ecological Groups	147
4. Species as Phylogenetic Groups	147
II. Taxonomical Trends	150
III. Conclusion	157
References	158

Chapter 10

Some Theoretical Considerations of Sexual Reproduction and Genetic Variation	161
I. The Process of Living	161
A. Introduction	161
B. The Fitness Concept	165
C. Cost of Sexual Reproduction	166

II.	Selected Hypotheses for the Origin and Maintenance of Sexual Reproduction	167
A.	Theories within POL	167
1.	Recombination as a Result of the Need for DNA Repair	167
2.	Clones vs. Clades — Arguments for Sexual Reproduction Based on Speciation Rates ..	168
3.	Sex as a Consequence of the Level of Organization	169
B.	Mendelian and Neo-Darwinian Hypotheses for Sex	170
1.	The Vicar of Bray	170
2.	The Ratchet	171
3.	The Best Man	171
4.	The Tangled Bank	171
5.	The Red Queen	172
	References	173

Chapter 11

	Ecological Implications of Apomixis	177
I.	Introduction	177
II.	Some Demographical Considerations	177
III.	Two General Interpretations of Apomixis	180
A.	Spreading the Risk of Mortality	180
B.	Apomixis in Sparse Populations	182
1.	Stochasticity	182
2.	Density-Dependent Effects	183
IV.	Some Ecological Implications of Polyploidy	184
V.	Competition	185
A.	Inter- or Intraspecific Competition?	186
B.	Effects of Competition on the Individual	186
C.	Competition and the Relative Production of Sexual and Apomictic Seeds	187
VI.	Coexistence	188
A.	Introduction	188
B.	Equilibrium Theories	189
1.	Coexistence between Clones	189
2.	Coexistence between a Sexual and an Asexual Type	189
3.	Frequency Dependence	192
C.	Nonequilibrium Theories	192
1.	Fugitives and Dominants	192
2.	Environmental Fluctuations and Buffering	193
3.	Slow Competitive Displacement	193
D.	Continuous Recruitment of New Clones	194

VII.	Herbivory and Apomictic Plants	194
VIII.	Pathogens and Apomictic Plants	196
IX.	Ecotype Differentiation in Apomictic Plants	198
	A. The Process	198
	B. The Raw Material — Genetic Variation	199
	C. Effects of Apomixis on Gene Flow	200
	D. Effects of Apomixis on Genetic Drift	201
	E. Apomixis and Selection	201
	F. Apomixis, Phenotypic Plasticity, and Response to Selection	203
	G. Some Aspects on the Relation between Apomixis and Natural Selection	204
X.	Aspects of Life History Patterns in Apomicts	205
	A. Introduction	205
	B. Life Form, Size, Vegetative Propagation, and Mobility	206
	C. Rate of Growth and Development	207
	D. Reproduction, Sexual System, and Pollination	207
	E. Flowering Time and Phenology	208
	F. Fecundity, Seed Size, and Germination	209
	G. Habitats of Apomicts	210
	References	211

Chapter 12

	Geographical Trends	221
I.	Patterns of Distribution	221
	A. Latitude	221
	B. Distributional Patterns of Apomicts and Amphimicts within a Species	222
	C. Levels of Altitude	228
	D. Occupancy of Glaciated Areas	228
II.	Historical Aspects — Distribution and Age of Apomicts	230
	A. General Remarks	230
	B. Some Examples	231
	1. <i>Crepis</i>	231
	2. <i>Rubus</i>	231
	3. <i>Taraxacum</i>	231
	4. <i>Hieracium</i>	234
	5. <i>Citrus</i>	234
	C. Classification of Apomictic Complexes	235
III.	Conclusion	236
	References	237

Chapter 13

Apomixis and Breeding	241
I. Introduction	241
II. Breeding Apomictic Crops	242
A. Background	242
B. Cultivated or Domesticated Species Which Normally Have Apomictic Reproduction	243
C. Fruit Trees and Berry Bushes with Apomixis	243
1. <i>Citrus</i>	243
2. Other Fruit Trees and Berry Bushes	244
D. Fodder Grasses with Apomixis	245
1. <i>Panicum maximum</i>	245
2. Other Tropical and Subtropical Forage Grasses	246
3. <i>Poa pratensis</i>	247
E. "Rubber Plants" of Asteraceae (Compositae)	248
III. Use of Apomixis in Breeding Crops with Sexual or Vegetative Reproduction	249
A. The Approach: "Transfer" vs. "Synthesis"	249
B. Maize	251
C. Rice	254
D. Wheat	254
E. Barley	255
F. <i>Sorghum</i>	256
G. <i>Pennisetum</i>	257
H. Distant Hybridization in Fodder Grasses	258
I. Sugar Beet	258
J. <i>Brassica</i> and <i>Raphanobrassica</i>	259
K. Strawberry	260
L. Apple	260
M. Cherry	261
N. Pea, Soybean, Alfalfa, and other Fabaceae	261
O. Cotton	261
P. Potato	261
Q. Tobacco	262
R. Other Crop Plants	262
S. Some Final Words	263
References	263
Glossary	279
Index	285
