

TABLE OF CONTENTS

Chapter 1

Protoplast — Isolation and Cell Regeneration	1
I. Definition and Significance	1
II. Isolation	1
A. Methods of Isolation	2
1. Mechanical Isolation	2
2. Enzymatic Isolation	2
a. Steps in Enzymatic Isolation	3
B. Factors Affecting Isolation	3
1. Source Material	3
a. Mesophyll Tissue	3
b. Callus and Cell Suspension	4
c. Pollen Grains	5
2. Osmoticum	6
3. Enzymes	7
4. Isolation Medium	8
5. Incubation Conditions	9
6. Tissue Pretreatment	9
III. Harvest, Purification, and Viability	10
IV. Protoplast to Cell — A Transition	11
V. Culture	13
A. Methods of Culture	14
1. Suspension Culture	14
a. Single Drop or Multiple Drops	16
b. Microchamber Culture	16
c. Microdroplet Culture	16
2. Plating of Protoplasts	16
VI. Cell Regeneration	18
A. Cell Wall Formation	18
B. Cell Division	20
C. Factors Affecting Division	20
1. Physical Environment	21
a. Density	21
b. Light	21
c. Temperature	22
2. Chemical Environment	23
a. Nutrient Medium	23
b. Osmoticum and Carbon Source	24
c. Hormones and Growth Regulators	25
d. pH	26
3. Genetic Nature	26
VII. Culture at Low Density	27

VIII.	Problems in Protoplast Culture	29
A.	General	29
B.	Protoplast Culture of Monocot Plants	29
IX.	Protoplast to Plant	31
X.	Microplasts/Cytoplasts and Their Utility	32
XI.	Protoplast — Applications in Fundamental Research	32
A.	Isolation of Cell Components	32
B.	Photosynthesis	33
C.	Stomatal Physiology	34
D.	Environmental Monitoring	34
E.	Cell Wall Formation	34
F.	Herbicide Physiology	34
G.	Circadian Rhythm	34
H.	Nitrogen Metabolism	35
I.	Hormone Physiology	35
	References	35
Chapter 2		
	Cell Modification	47
I.	Introduction	47
II.	Cell Genetics — Complementary to Conventional Genetics	47
III.	Terminology — Mutant vs. Variant	47
A.	Epigenetic Variation	48
B.	Mutation	48
IV.	Spontaneous Modification or Somaclonal Variation	49
A.	Variant Plants with Desirable Characters	49
1.	Sugarcane	49
2.	Potato	50
3.	Maize	51
4.	Alfalfa	51
5.	Geranium	51
6.	Brassica	51
B.	Variant Plants with New Characters	51
1.	Tobacco	51
2.	Rice	51
3.	Wheat	51
4.	Tomato	51
C.	Variants with Chromosome Modifications	52
D.	Nature of Variation	52
1.	Is Variation Preexisting?	52
2.	Is Variation Simple or Complex?	53
3.	Is Variation Heritable?	53
E.	Origin of Variation	53
F.	Limitations and Prospects	53

V.	Induced Modification	54
VI.	Selection	54
A.	Direct Selection for Resistance	54
B.	Indirect Selection for Conditional Mutants	54
C.	Limits to Selection	54
VII.	System	54
A.	Necessity of Plating Technique	55
B.	Mutagen Treatment	55
C.	Mutation Frequency	56
D.	Ploidy of Plant Cells	56
E.	Model System	56
VIII.	Variant Cell Lines	56
A.	Pigment Variants	57
B.	Alkaloid Variants	57
C.	Antibiotic Resistance	57
D.	Resistance to Purine and Pyrimidine Analogues	58
E.	Resistance to Amino Acid Analogues	60
F.	Resistance to Toxins	62
G.	Resistance to Herbicides	63
H.	Resistance to Stress	64
1.	Chilling Stress	64
2.	Heat Stress	65
3.	Salt Stress	65
4.	Drought Stress	67
5.	Metal Stress	67
I.	Developmental Variants	67
1.	Growth Regulator Variants	67
2.	Transcriptional Variants	68
J.	Metabolic Variants	68
1.	Alternate Respiratory Chain	68
2.	Carbon Metabolism	68
3.	Sulfur Metabolism	69
4.	Carbon Assimilation	69
5.	Nitrate Assimilation	69
K.	Auxotrophs	70
IX.	Chromosome Elimination: A New Method for Cell Genetics	73
X.	Prospects	73
	References	73

Chapter 3

Cell Fusion	85
I. Introduction	85

II.	A New System for Genetic Engineering of Higher Plants.....	85
III.	Fusion of Protoplasts.....	85
A.	Spontaneous.....	85
B.	Induced.....	86
1.	Agglutinating Agents.....	87
a.	Sodium Nitrate.....	87
b.	High Calcium.....	87
c.	Polyethylene Glycol (PEG).....	88
d.	Electrical Stimulation.....	91
IV.	Selection of a Hybrid (Heterokaryon).....	94
A.	Complementation of Visual Characters.....	94
B.	Genetic Complementation.....	95
C.	Complementation of Metabolic Characters.....	97
D.	Visual Characters — Sole Basis of Selection.....	99
V.	Confirmation of a Hybrid.....	101
VI.	Selection of a Cybrid.....	102
VII.	Achievements of Cell Fusion.....	102
A.	Intraspecific Hybrids.....	103
B.	Interspecific Hybrids.....	103
C.	Intergeneric Hybrids.....	103
D.	Transfer of Male Sterility.....	103
E.	Transfer of Disease Resistance.....	104
F.	Restoration of Regeneration Potential.....	104
VIII.	Genetic Analysis of Cell Hybrids.....	105
A.	Nuclear Fusion in Cell Hybrids.....	105
B.	Cytoplasmic Fusion in Cell Hybrids.....	106
C.	Intergeneric Cell Hybrids.....	106
IX.	Gene Transfer Through Cell Fusion.....	107
A.	Gene Transfer in Whole-Cell Fusion.....	107
B.	Gene Transfer in Cytoplasmic Fusion.....	108
C.	Gene Transfer in Microplast Fusion.....	109
D.	Gene Transfer in Plant and Microbial Cell Fusion.....	109
X.	Limitations of Cell Fusion.....	109
XI.	Prospects.....	110
	References.....	110

Chapter 4

Cell Transformation	119
I. Introduction.....	119

II.	History	119
A.	Uptake of DNA by Seeds and Seedlings	120
B.	Uptake of DNA by Pollen	121
C.	Uptake of DNA by Cells	121
III.	Transformation by Free DNA	122
A.	Uptake of DNA by Protoplasts	122
B.	Transformation of Protoplasts	122
IV.	Transformation by Liposome-Coated DNA	123
A.	Preparation of Liposomes	123
B.	Interaction of Liposomes and Protoplasts	124
C.	Biological Activity of Liposome-Coated DNA/RNA	124
V.	Transformation by Bacterial Cocultivation	125
VI.	Crown Gall — An Example of Genetic Engineering in Nature	127
A.	Cell Transformation — Basic Aspects	128
B.	Cell Transformation — Molecular Aspects	128
1.	Ti-Plasmid	129
a.	Virulent Region	129
b.	R- and Tra-Regions	130
c.	T-Region (Transferred DNA in Plant Cells)	130
2.	Insertion of T-Region	130
3.	Expression of T-DNA in Plant Cells	131
a.	Translation of T-DNA-Derived mRNA in Plant Cells	132
b.	Sequencing of Genes for Octopine and Nopaline Synthesis	132
4.	Functional Analysis of T-DNA	132
C.	Cell Transformation — Physiological Aspects	134
VII.	Plant Viruses — Another Example of Genetic Engineering in Nature	134
A.	Single-Stranded RNA Virus	134
B.	Single-Stranded DNA Virus	134
C.	Double-Stranded DNA Virus	135
D.	CaMV as a Vector	136
VIII.	Transformation Via Vector	137
A.	Cell Transformation Using T-DNA as a Vector	137
1.	Design of Intermediate or Shuttle Plasmid	137
2.	Chimeric Gene Construct	139
3.	Problems and Prospects of T-DNA-Mediated Transfer of Genes	140
B.	Cell Transformation Using CaMV as a Vector	142
C.	Potential Vectors for Cell Transformation	142
1.	Mobile Genetic Elements	142
2.	Mitochondrial Extrachromosomal Elements	143
IX.	Transformation by Direct Gene Transfer	143

X.	Transformation Following Microinjection of DNA.....	145
XI.	Transformation Following Transplantation of Foreign Nucleus	145
XII.	Prospects.....	146
	References.....	147
Chapter 5		
	Cell Preservation	157
I.	Introduction.....	157
II.	Storage of Plant Cells.....	158
	A. Low-Oxygen Storage or Mineral Oil Overlay	158
	B. Cold Storage	158
	C. Dry Storage	158
	D. Low-Pressure Storage	159
III.	Aims in Preservation.....	159
IV.	Cryopreservation of Plant Cells.....	159
	A. Principle and Terminology	159
	1. Supercooling of Water and Ice Nucleation.....	159
	2. Evolution of Latent Heat During Cooling.....	160
	3. Vitrification and Devitrification.....	160
	4. Dehydration and Substitution of Water	161
	B. Frost Damage	161
	1. Cold Shock or Chilling Injury	161
	2. Cell Shrinkage	162
	3. Ice Formation.....	162
	C. Prevention of Frost Damage.....	162
	D. Cryoprotectants.....	163
	E. Process of Cryopreservation	164
	1. Slow Cooling	164
	2. Rapid Cooling	165
	3. Stepwise Cooling	165
	4. Dry Freezing.....	165
	F. Factors Affecting Cryopreservation.....	165
	1. Nature of Material	165
	2. Tissue Pretreatment	165
	3. Cryoprotectant	166
	G. Storage and Recovery	167
	1. Warming.....	167
	2. Postthaw Treatment.....	167
V.	Achievements.....	167
	A. Callus	167
	B. Cell Suspension	168
	C. Shoot Tip.....	169
	D. Somatic Embryos.....	169

E.	Pollen Embryos	170
F.	Protoplasts	170
