

Contents

Preface xv

Chapter 1 The Nature of Ecology 1

1.1 Ecology Is the Study of the Relationship between Organisms and Their Environment 2

1.2 Organisms Interact with the Environment in the Context of the Ecosystem 2

■ ECOLOGICAL ISSUES: Ecology Has Complex Roots 3

1.3 Ecological Systems Form a Hierarchy 4

1.4 Ecologists Study Pattern and Process at Many Levels 5

1.5 Ecologists Investigate Nature Using the Scientific Method 6

■ QUANTIFYING ECOLOGY 1.1: Classifying Ecological Data 8

1.6 Models Provide a Basis for Predictions 9

■ QUANTIFYING ECOLOGY 1.2: Displaying Ecological Data: Histograms and Scatter Plots 10

1.7 Uncertainty Is an Inherent Feature of Science 12

1.8 Ecology Has Strong Ties to Other Disciplines 12

1.9 The Individual Is the Basic Unit of Ecology 13

Summary 13 • Study Questions 14 • Further Readings 14

PART 1 The Physical Environment 16

Chapter 2 Climate 18

2.1 Earth Intercepts Solar Radiation 19

2.2 Intercepted Solar Radiation Varies Seasonally 21

2.3 Air Temperature Decreases with Altitude 22

2.4 Air Masses Circulate Globally 25

2.5 Solar Energy, Wind, and Earth's Rotation Create Ocean Currents 26

2.6 Temperature Influences the Moisture Content of Air 27

2.7 Precipitation Has a Distinctive Global Pattern 27

2.8 Topography Influences Regional and Local Patterns of Precipitation 30

2.9 Irregular Variations in Climate Occur at the Regional Scale 30

2.10 Most Organisms Live in Microclimates 32

■ ECOLOGICAL ISSUES: Urban Microclimates 33

Summary 34 • Study Questions 35 • Further Readings 35

Chapter 3 The Aquatic Environment 36

3.1 Water Cycles between Earth and the Atmosphere 37

■ ECOLOGICAL ISSUES: Groundwater Resources 38

3.2 Water Has Important Physical Properties 39

3.3 Light Varies with Depth in Aquatic Environments 41

3.4 Temperature Varies with Water Depth 42

3.5 Water Functions as a Solvent 44

3.6 Oxygen Diffuses from the Atmosphere to the Surface Waters 45

3.7 Acidity Has a Widespread Influence on Aquatic Environments 46

3.8 Water Movements Shape Freshwater and Marine Environments 47

3.9	Tides Dominate the Marine Coastal Environment	48
3.10	The Transition Zone between Freshwater and Saltwater Environments Presents Unique Constraints	49
Summary	50 • Study Questions 51 • Further Readings 51	

Chapter 4 The Terrestrial Environment 52

4.1	Life on Land Imposes Unique Constraints	53
4.2	Plant Cover Influences the Vertical Distribution of Light	54
	■ QUANTIFYING ECOLOGY 4.1: Beer's Law and the Attenuation of Light	56
4.3	Soil Is the Foundation upon Which All Terrestrial Life Depends	57
4.4	The Formation of Soil Begins with Weathering	58
4.5	Soil Formation Involves Five Interrelated Factors	58
4.6	Soils Have Certain Distinguishing Physical Characteristics	59
4.7	The Soil Body Has Horizontal Layers, or Horizons	60
4.8	Moisture-Holding Capacity Is an Essential Feature of Soils	61
4.9	Ion Exchange Capacity Is Important to Soil Fertility	62
4.10	Basic Soil Formation Processes Produce Different Soils	63
Summary	65 • Study Questions 66 • Further Readings 67	

PART 2 The Organism and Its Environment 68

Chapter 5 Ecological Genetics: Adaptation and Natural Selection 70

5.1	Adaptations Are a Product of Natural Selection	71
5.2	Genes Are the Units of Inheritance	72
5.3	The Phenotype Is the Physical Expression of the Genotype	72
5.4	Genetic Variation Occurs at the Level of the Population	73
5.5	Adaptation Is a Product of Evolution by Natural Selection	73
5.6	Several Processes Can Function to Alter Patterns of Genetic Variation	77
	■ QUANTIFYING ECOLOGY 5.1: Hardy-Weinberg Principle	78
5.7	Natural Selection Can Result in Genetic Differentiation	80
5.8	Adaptations Reflect Trade-offs and Constraints	81
	■ FIELD STUDIES: Beren Robinson	82
5.9	Organisms Respond to Environmental Variation at the Individual and Population Levels	86
	■ ECOLOGICAL ISSUES: The Ecology of Antibiotic Resistance	88
Summary	89 • Study Questions 90 • Further Readings 90	

Chapter 6 Plant Adaptations to the Environment 92

6.1	Photosynthesis Is the Conversion of Carbon Dioxide into Simple Sugars	93
6.2	The Light a Plant Receives Affects Its Photosynthetic Activity	94
6.3	Photosynthesis Involves Exchanges between the Plant and Atmosphere	95
6.4	Water Moves from the Soil, through the Plant, to the Atmosphere	95
6.5	The Process of Carbon Uptake Differs for Aquatic and Terrestrial Plants	98
6.6	Plant Temperatures Reflect Their Energy Balance with the Surrounding Environment	98
6.7	Carbon Gained in Photosynthesis Is Allocated to the Production of Plant Tissues	99
6.8	Constraints Imposed by the Physical Environment Have Resulted in a Wide Array of Plant Adaptations	101

6.9 Species of Plants Are Adapted to Different Light Environments 101

■ **QUANTIFYING ECOLOGY 6.1: Relative Growth Rate** 104

6.10 The Link between Water Demand and Temperature Influences Plant Adaptations 106

■ **FIELD STUDIES: Kaoru Kitajima** 108

6.11 Plants Vary in Their Response to Environmental Temperatures 112

6.12 Plants Exhibit Adaptations to Variations in Nutrient Availability 113

6.13 Wetland Environments Present Unique Constraints on Plant Adaptations 115

Summary 116 • Study Questions 118 • Further Readings 118

Chapter 7 Animal Adaptations to the Environment 119

7.1 Size Imposes a Fundamental Constraint on the Evolution of Organisms 120

7.2 Animals Have Various Ways of Acquiring Energy and Nutrients 122

7.3 Animals Have Various Nutritional Needs 125

7.4 Mineral Availability Affects Animal Growth and Reproduction 126

7.5 Animals Require Oxygen to Release Energy Contained in Food 127

■ **FIELD STUDIES: Martin Wikelski** 128

7.6 Regulation of Internal Conditions Involves Homeostasis and Feedback 130

7.7 Animals Exchange Energy with Their Surrounding Environment 130

■ **QUANTIFYING ECOLOGY 7.1: Heat Exchange and Temperature Regulation** 132

7.8 Animals Fall into Three Groups Relative to Temperature Regulation 133

7.9 Poikilotherms Depend on Environmental Temperatures 134

7.10 Homeotherms Escape the Thermal Restraints of the Environment 135

7.11 Endothermy and Ectothermy Involve Trade-offs 136

7.12 Heterotherms Take on Characteristics of Ectotherms and Endotherms 138

7.13 Torpor Helps Some Animals Conserve Energy 138

7.14 Some Animals Use Unique Physiological Means for Thermal Balance 139

7.15 Maintenance of Water Balance for Terrestrial Animals Is Constrained by Uptake and Conservation 140

7.16 Animals of Aquatic Environments Face Unique Problems in Maintaining Water Balance 141

7.17 Buoyancy Helps Aquatic Organisms to Stay Afloat 142

7.18 Daily and Seasonal Light and Dark Cycles Influence Animal Activity 142

7.19 Critical Day Lengths Trigger Seasonal Responses 143

7.20 Activity Rhythms of Intertidal Organisms Follow Tidal Cycles 144

Summary 145 • Study Questions 147 • Further Readings 147

PART 3 Populations 148

Chapter 8 Properties of Populations 150

8.1 Organisms May Be Unitary or Modular 151

8.2 The Distribution of a Population Defines Its Spatial Location 151

8.3 Abundance Reflects Population Density and Distribution 153

8.4 Determining Density Requires Sampling 156

8.5 Populations Have Age Structures 156

8.6 Sex Ratios in Populations May Shift with Age 158

8.7	Individuals Move Within the Population	158
8.8	Population Distribution and Density Change in Both Time and Space	160
	■ ECOLOGICAL ISSUES: Human-Assisted Dispersal	162
	Summary	163 • Study Questions 163 • Further Readings 164
Chapter 9	Population Growth	165
9.1	Population Growth Reflects the Difference between Rates of Birth and Death	166
	■ QUANTIFYING ECOLOGY 9.1: Derivatives and Differential Equations	167
	■ QUANTIFYING ECOLOGY 9.2: Exponential Model of Population Growth	168
9.2	Life Tables Provide a Schedule of Age-Specific Mortality and Survival	169
9.3	Different Types of Life Tables Reflect Different Approaches to Defining Cohorts and Age Structure	170
	■ QUANTIFYING ECOLOGY 9.3: Life Expectancy	171
9.4	Life Tables Provide Data for Mortality and Survivorship Curves	172
9.5	Birthrate Is Age-Specific	173
9.6	Birthrate and Survivorship Determine Net Reproductive Rate	174
9.7	Age-Specific Mortality and Birthrates Can Be Used to Project Population Growth	174
9.8	Stochastic Processes Can Influence Population Dynamics	176
9.9	A Variety of Factors Can Lead to Population Extinction	177
9.10	Small Populations Are Susceptible to Extinction	177
	Summary	178 • Study Questions 179 • Further Readings 179
Chapter 10	Life History	181
10.1	The Evolution of Life Histories Involves Trade-offs	182
10.2	Reproduction Involves Both Benefits and Costs to Individual Fitness	182
10.3	Age at Maturity Is Influenced by Patterns of Age-Specific Mortality	183
10.4	Reproductive Effort Is Governed by Trade-offs between Fecundity and Survival	185
10.5	There Is a Trade-off between the Number and Size of Offspring	188
	■ QUANTIFYING ECOLOGY 10.1: Interpreting Trade-offs	190
10.6	Species Differ in the Timing of Reproduction	190
10.7	An Individual's Life History Represents the Interaction between Genotype and the Environment	192
10.8	Mating Systems Describe the Pairing of Males and Females	193
10.9	Acquisition of a Mate Involves Sexual Selection	194
10.10	Females May Choose Mates Based on Resources	195
	■ FIELD STUDIES: Alexandra L. Basolo	196
10.11	Patterns of Life History Characteristics Reflect External Selective Forces	198
	Summary	200 • Study Questions 201 • Further Readings 201
Chapter 11	Intraspecific Population Regulation	202
11.1	The Environment Functions to Limit Population Growth	203
	■ ECOLOGICAL ISSUES: The Human Carrying Capacity	204
11.2	Population Regulation Involves Density Dependence	206
	■ QUANTIFYING ECOLOGY 11.1: The Logistic Model of Population Growth	207
11.3	Competition Results When Resources Are Limited	207

- 11.4 Intraspecific Competition Affects Growth and Development 208
- 11.5 Intraspecific Competition Can Influence Mortality Rates 210
- 11.6 Intraspecific Competition Can Reduce Reproduction 212
 - **FIELD STUDIES: T. Scott Sillett** 214
- 11.7 High Density Is Stressful to Individuals 216
- 11.8 Dispersal Can Be Density Dependent 216
- 11.9 Social Behavior May Function to Limit Populations 217
- 11.10 Territoriality Can Function to Regulate Population Growth 217
- 11.11 Plants Preempt Space and Resources 219
- 11.12 Density-Independent Factors Can Influence Population Growth 219
- Summary 220 • Study Questions 221 • Further Readings 222

Chapter 12 Metapopulations 223

- 12.1 Four Conditions Define a Metapopulation 224
- 12.2 Metapopulation Dynamics Is a Balance between Colonization and Extinction 226
 - **QUANTIFYING ECOLOGY 12.1: Equilibrium Proportion of Occupied Patches** 227
- 12.3 Patch Area and Isolation Influence Metapopulation Dynamics 227
- 12.4 Habitat Heterogeneity Influences Local Population Persistence 230
- 12.5 Some Habitat Patches May Function as the Major Source of Emigrants 230
- 12.6 Certain Factors Can Function to Synchronize the Dynamics of Local Populations 231
- 12.7 Species Differ in Their Potential Rates of Colonization and Extinction 232
- 12.8 The Concept of Population Is Best Approached by Using a Hierarchical Framework 233
- Summary 234 • Study Questions 235 • Further Readings 235

PART 4 Species Interactions 236

Chapter 13 Species Interactions, Population Dynamics, and Natural Selection 238

- 13.1 Species Interactions Can Be Classified Based on Their Reciprocal Effects 239
- 13.2 Species Interactions Influence Population Dynamics 240
- 13.3 Species Interactions Can Function as Agents of Natural Selection 241
- 13.4 The Nature of Species Interactions Can Vary Across Geographic Landscapes 245
- 13.5 Species Interactions Can Be Diffuse 245
- 13.6 Species Interactions Influence the Species' Niche 246
- 13.7 Species Interactions Can Drive Adaptive Radiation 248
- Summary 249 • Study Questions 249 • Further Readings 250

Chapter 14 Interspecific Competition 251

- 14.1 Interspecific Competition Involves Two or More Species 252
- 14.2 There Are Four Possible Outcomes of Interspecific Competition 252
- 14.3 Laboratory Experiments Support the Lotka-Volterra Equations 253
 - **QUANTIFYING ECOLOGY 14.1: Interpreting Population Isoclines** 255
- 14.4 Studies Support the Competitive Exclusion Principle 256
- 14.5 Competition Is Influenced by Nonresource Factors 256

- 14.6 Temporal Variation in the Environment Influences Competitive Interactions 257
- FIELD STUDIES: Katherine N. Suding 258
- 14.7 Competition Occurs for Multiple Resources 260
- 14.8 Relative Competitive Abilities Change along Environmental Gradients 261
- QUANTIFYING ECOLOGY 14.2: Competition under Changing Environmental Conditions: Application of the Lotka-Volterra Model 263
- 14.9 Interspecific Competition Influences the Niche of a Species 266
- 14.10 Coexistence of Species Often Involves Partitioning Available Resources 267
- 14.11 Competition Is a Complex Interaction Involving Biotic and Abiotic Factors 270
- Summary 270 • Study Questions 271 • Further Readings 272

Chapter 15 Predation 273

- 15.1 Predation Takes a Variety of Forms 274
- 15.2 Mathematical Model Describes the Basics of Predation 274
- 15.3 Model Suggests Mutual Population Regulation 276
- 15.4 Functional Responses Relate Prey Consumed to Prey Density 277
- 15.5 Predators Respond Numerically to Changing Prey Density 280
- 15.6 Foraging Involves Decisions about the Allocation of Time and Energy 281
- QUANTIFYING ECOLOGY 15.1: A Simple Model of Optimal Foraging 283
- 15.7 Foragers Seek Productive Food Patches 284
- 15.8 Risk of Predation Can Influence Foraging Behavior 285
- 15.9 Coevolution Can Occur between Predator and Prey 285
- 15.10 Animal Prey Have Evolved Defenses against Predators 285
- 15.11 Predators Have Evolved Efficient Hunting Tactics 289
- 15.12 Herbivores Prey on Autotrophs 289
- FIELD STUDIES: Rick A. Relyea 290
- 15.13 Plants Have Evolved Characteristics That Deter Herbivores 292
- 15.14 Plants, Herbivores, and Carnivores Interact 294
- 15.15 Predators Influence Prey Dynamics through Lethal and Nonlethal Effects 294
- Summary 296 • Study Questions 297 • Further Readings 297

Chapter 16 Parasitism and Mutualism 298

- 16.1 Parasites Draw Resources from Host Organisms 299
- 16.2 Hosts Provide Diverse Habitats for Parasites 300
- 16.3 Direct Transmission Can Occur between Host Organisms 300
- 16.4 Transmission between Hosts Can Involve an Intermediate Vector 301
- 16.5 Transmission Can Involve Multiple Hosts and Stages 301
- 16.6 Hosts Respond to Parasitic Invasions 301
- 16.7 Parasites Can Affect Host Survival and Reproduction 303
- 16.8 Parasites May Regulate Host Populations 303
- 16.9 Parasitism Can Evolve into a Mutually Beneficial Relationship 305
- 16.10 Mutualisms Involve Diverse Species Interactions 305
- ECOLOGICAL ISSUES: Plagues Upon Us 306
- 16.11 Mutualisms Are Involved in the Transfer of Nutrients 307
- FIELD STUDIES: John J. Stachowicz 308

- 16.12 Some Mutualisms Are Defensive 311
- 16.13 Mutualisms Are Often Necessary for Pollination 311
- 16.14 Mutualisms Are Involved in Seed Dispersal 312
- 16.15 Mutualisms Can Influence Population Dynamics 313
- **QUANTIFYING ECOLOGY 16.1: A Model of Mutualistic Interactions** 314
- Summary 315 • Study Questions 316 • Further Readings 316

PART 5 Community Ecology 318

Chapter 17 Community Structure 320

- 17.1 The Number of Species and Their Relative Abundance Define Diversity 321
- 17.2 Numerical Supremacy Defines Dominance 323
- 17.3 Keystone Species Influence Community Structure Disproportionately to Their Numbers 323
- 17.4 Food Webs Describe Species Interactions 324
- 17.5 Species within a Community Can Be Classified into Functional Groups 324
- 17.6 Communities Have a Characteristic Physical Structure 326
- 17.7 Zonation Is Spatial Change in Community Structure 328
- 17.8 Defining Boundaries between Communities Is Often Difficult 329
- 17.9 Two Contrasting Views of the Community 331
- **QUANTIFYING ECOLOGY 17.1: Community Similarity** 332
- Summary 333 • Study Questions 334 • Further Readings 334

Chapter 18 Factors Influencing the Structure of Communities 335

- 18.1 The Fundamental Niche Constrains Community Structure 336
- 18.2 Species Interactions Are Diffuse 337
- **FIELD STUDIES: Sally D. Hacker** 338
- 18.3 Food Webs Illustrate Indirect Interactions 340
- **QUANTIFYING ECOLOGY 18.1: Quantifying the Structure of Food Webs: Connectance** 341
- 18.4 Food Webs Suggest Controls of Community Structure 344
- 18.5 Species Interactions along Environmental Gradients Involve Both Stress Tolerance and Competition 345
- 18.6 Environmental Heterogeneity Influences Community Diversity 348
- 18.7 Resource Availability Can Influence Plant Diversity within a Community 349
- Summary 351 • Study Questions 352 • Further Readings 352

Chapter 19 Community Dynamics 353

- 19.1 Community Structure Changes Through Time 354
- **ECOLOGICAL ISSUES: American Forests** 356
- 19.2 Primary Succession Occurs on Newly Exposed Substrates 358
- 19.3 Secondary Succession Occurs after Disturbances 358
- 19.4 The Study of Succession Has a Rich History 360
- 19.5 Succession Is Associated with Autogenic Changes in Environmental Conditions 361
- 19.6 Species Diversity Changes during Succession 363
- 19.7 Succession Involves Heterotrophic Species 364
- 19.8 Systematic Changes in Community Structure Are a Result of Allogenic Environmental Change at a Variety of Timescales 365

19.9	Community Structure Changes over Geologic Time	367
19.10	The Concept of Community Revisited	369
Summary	371 • Study Questions	372 • Further Readings 373

Chapter 20 Landscape Dynamics 374

20.1	Environmental Processes Create a Variety of Patches in the Landscape	375
20.2	Transition Zones Offer Diverse Conditions and Habitats	377
20.3	Patch Size and Shape Are Crucial to Species Diversity	378
20.4	The Theory of Island Biogeography Applies to Landscape Patches	382
20.5	Landscape Connectivity Permits Movement between Patches	384
20.6	The Metapopulation and Metacommunity Are Central Concepts in the Study of Landscape Dynamics	385
20.7	Frequency, Intensity, and Scale Determine the Impact of Disturbances	385
	■ FIELD STUDIES: Nick M. Haddad	386
20.8	Various Natural Processes Function as Disturbances	388
20.9	Human Disturbance Creates Some of the Most Long-Lasting Effects	390
20.10	The Landscape Represents a Shifting Mosaic of Changing Communities	391
Summary	391 • Study Questions	392 • Further Readings 393

PART 6 Ecosystem Ecology 394

Chapter 21 Ecosystem Energetics 396

21.1	The Laws of Thermodynamics Govern Energy Flow	397
21.2	Energy Fixed in the Process of Photosynthesis Is Primary Production	397
21.3	Temperature, Water, and Nutrients Control Primary Production in Terrestrial Ecosystems	398
21.4	Temperature, Light, and Nutrients Control Primary Production in Aquatic Ecosystems	401
21.5	External Inputs of Organic Carbon Can Be Important in Aquatic Ecosystems	403
21.6	Energy Allocation and Plant Life-Form Influence Primary Production	404
21.7	Primary Productivity Varies with Time	405
21.8	Primary Productivity Limits Secondary Production	406
	■ ECOLOGICAL ISSUES: Human Appropriation of Net Primary Productivity	408
21.9	Consumers Vary in Efficiency of Production	408
21.10	Ecosystems Have Two Major Food Chains	410
21.11	Energy Flows through Trophic Levels Can Be Quantified	411
	■ FIELD STUDIES: Brian Silliman	412
21.12	Consumption Efficiency Determines the Pathway of Energy Flow through the Ecosystem	414
21.13	Energy Decreases in Each Successive Trophic Level	415
Summary	416 • Study Questions	417 • Further Readings 417

Chapter 22 Decomposition and Nutrient Cycling 419

22.1	Most Essential Nutrients Are Recycled within the Ecosystem	420
22.2	Decomposition Is a Complex Process Involving a Variety of Organisms	421

22.3	Studying Decomposition Involves Following the Fate of Dead Organic Matter	423
■	QUANTIFYING ECOLOGY 22.1: Estimating the Rate of Decomposition	424
22.4	Several Factors Influence the Rate of Decomposition	425
■	FIELD STUDIES: Edward A. G. (Ted) Schuur	428
22.5	Nutrients in Organic Matter Are Mineralized During Decomposition	430
22.6	Decomposition Proceeds as Plant Litter Is Converted into Soil Organic Matter	432
22.7	Plant Processes Enhance the Decomposition of Soil Organic Matter in the Rhizosphere	434
22.8	Decomposition Occurs in Aquatic Environments	434
22.9	Key Ecosystem Processes Influence the Rate of Nutrient Cycling	436
■	ECOLOGICAL ISSUES: Nitrogen Fertilizers	437
22.10	Nutrient Cycling Differs between Terrestrial and Open-Water Aquatic Ecosystems	438
22.11	Water Flow Influences Nutrient Cycling in Streams and Rivers	440
22.12	Land and Marine Environments Influence Nutrient Cycling in Coastal Ecosystems	441
22.13	Surface Ocean Currents Bring about Vertical Transport of Nutrients	443
	Summary • Study Questions • Further Readings	443 • 444 • 445

Chapter 23 Biogeochemical Cycles 446

23.1	There Are Two Major Types of Biogeochemical Cycles	447
23.2	Nutrients Enter the Ecosystem via Inputs	447
23.3	Outputs Represent a Loss of Nutrients from the Ecosystem	448
23.4	Biogeochemical Cycles Can Be Viewed from a Global Perspective	448
23.5	The Carbon Cycle Is Closely Tied to Energy Flow	448
23.6	Carbon Cycling Varies Daily and Seasonally	450
23.7	The Global Carbon Cycle Involves Exchanges among the Atmosphere, Oceans, and Land	451
23.8	The Nitrogen Cycle Begins with Fixing Atmospheric Nitrogen	452
23.9	The Phosphorus Cycle Has No Atmospheric Pool	454
23.10	The Sulfur Cycle Is Both Sedimentary and Gaseous	455
■	ECOLOGICAL ISSUES: Nitrogen Saturation	457
23.11	The Global Sulfur Cycle Is Poorly Understood	458
23.12	The Oxygen Cycle Is Largely under Biological Control	459
23.13	The Various Biogeochemical Cycles Are Linked	460
	Summary • Study Questions • Further Readings	461 • 462 • 463

PART 7 Ecological Biogeography 464

Chapter 24 Terrestrial Ecosystems 466

24.1	Terrestrial Ecosystems Reflect Adaptations of the Dominant Plant Life-Forms	468
■	QUANTIFYING ECOLOGY 24.1: Climate Diagrams	470
24.2	Tropical Forests Characterize the Equatorial Zone	471
24.3	Tropical Savannas Are Characteristic of Semiarid Regions with Seasonal Rainfall	474
24.4	Grassland Ecosystems of the Temperate Zone Vary with Climate and Geography	476
24.5	Deserts Represent a Diverse Group of Ecosystems	479
24.6	Mediterranean Climates Support Temperate Shrublands	482

- 24.7 Forest Ecosystems Dominate the Wetter Regions of the Temperate Zone 484
- 24.8 Conifer Forests Dominate the Cool Temperate and Boreal Zones 486
- 24.9 Low Precipitation and Cold Temperatures Define the Arctic Tundra 488
- Summary 490 • Study Questions 492 • Further Readings 492

Chapter 25 Aquatic Ecosystems 493

- 25.1 Lakes Have Many Origins 494
- 25.2 Lakes Have Well-Defined Physical Characteristics 494
 - ECOLOGICAL ISSUES: Dams: Regulating the Flow of River Ecosystems 496
- 25.3 The Nature of Life Varies in the Different Zones 497
- 25.4 The Character of a Lake Reflects Its Surrounding Landscape 498
- 25.5 Flowing-Water Ecosystems Vary in Structure and Types of Habitats 499
- 25.6 Life Is Highly Adapted to Flowing Water 501
 - QUANTIFYING ECOLOGY 25.1: Streamflow 502
- 25.7 The Flowing-Water Ecosystem Is a Continuum of Changing Environments 504
- 25.8 Rivers Flow into the Sea, Forming Estuaries 504
- 25.9 Oceans Exhibit Zonation and Stratification 506
- 25.10 Pelagic Communities Vary Among the Vertical Zones 507
- 25.11 Benthos Is a World of Its Own 508
- 25.12 Coral Reefs Are Complex Ecosystems Built by Colonies of Coral Animals 509
- 25.13 Productivity of the Oceans Is Governed by Light and Nutrients 510
- Summary 511 • Study Questions 513 • Further Readings 513

Chapter 26 Coastal and Wetland Ecosystems 514

- 26.1 The Intertidal Zone Is the Transition between Terrestrial and Marine Environments 515
- 26.2 Rocky Shorelines Have a Distinct Pattern of Zonation 515
- 26.3 Sandy and Muddy Shores Are Harsh Environments 517
- 26.4 Tides and Salinity Dictate the Structure of Salt Marshes 518
- 26.5 Mangroves Replace Salt Marshes in Tropical Regions 519
- 26.6 Freshwater Wetlands Are a Diverse Group of Ecosystems 520
- 26.7 Hydrology Defines the Structure of Freshwater Wetlands 523
 - ECOLOGICAL ISSUES: The Continuing Decline of the Wetlands 524
- 26.8 Freshwater Wetlands Support a Rich Diversity of Life 526
- Summary 526 • Study Questions 527 • Further Readings 527

Chapter 27 Large-Scale Patterns of Biological Diversity 528

- 27.1 Earth's Biological Diversity Has Changed through Geologic Time 529
- 27.2 Past Extinctions Have Been Clustered in Time 530
- 27.3 Regional and Global Patterns of Species Diversity Vary Geographically 530
- 27.4 Species Richness in Terrestrial Ecosystems Correlates with Climate and Productivity 532
- 27.5 In Marine Environments, There Is an Inverse Relationship between Productivity and Diversity 533
- 27.6 Species Diversity Is a Function of Processes Operating at Many Scales 534
 - QUANTIFYING ECOLOGY 27.1: Quantifying Biodiversity: Comparing Species Richness Using Rarefaction Curves 535
- Summary 536 • Study Questions 537 • Further Readings 537

PART 8 Human Ecology 538

Chapter 28 Population Growth, Resource Use, and Sustainability 540

- 28.1 Sustainable Resource Use Is a Balance between Supply and Demand 542
- 28.2 Sustainability Can Be Indirectly Limited by Adverse Consequences of Resource Use 544
- 28.3 Sustainability Is a Concept Learned from Natural Ecosystems 544
- 28.4 Agricultural Practices Vary in the Level of Energy Input 544
- 28.5 Swidden Agriculture Represents a Dominant Form of Agriculture in the Wet Tropics 545
- 28.6 Industrialized Agriculture Dominates the Temperate Zone 546
- 28.7 Different Agricultural Methods Represent a Trade-off between Sustainability and Productivity 548
- 28.8 Sustainable Agriculture Depends on a Variety of Methods 549
- 28.9 Sustainable Forestry Aims to Achieve a Balance between Net Growth and Harvest 551
 - **FIELD STUDIES: Deborah Lawrence** 552
- 28.10 Exploitation of Fisheries Has Led to the Need for Management 556
- 28.11 Fisheries Management Requires an Ecosystem Approach 558
- 28.12 Economics Are a Key Factor Governing Resource Management 560
- Summary 562 • Study Questions 564 • Further Readings 564

Chapter 29 Habitat Loss, Biodiversity, and Conservation 565

- 29.1 Habitat Destruction Is the Leading Cause of Current Species Extinctions 566
- 29.2 Human-Introduced Invasive Species May Threaten Many Native Species 568
- 29.3 Species Differ in Their Susceptibility to Extinction 571
- 29.4 Identifying Threatened Species Is Critical to Conservation Efforts 572
- 29.5 Regions of High Species Diversity Are Crucial to Conservation Efforts 572
 - **ECOLOGICAL ISSUES: Wolf Reintroduction, Restoration, and Management** 575
- 29.6 Protecting Populations Is the Key To Conservation Efforts 576
- 29.7 Reintroduction Is Necessary to Reestablish Populations of Some Species 577
- 29.8 Habitat Conservation Functions to Protect Whole Communities 579
- 29.9 Habitat Conservation Involves Establishing Protected Areas 579
- 29.10 Habitat Restoration Is Often Necessary in Conservation Efforts 582
- 29.11 Environmental Ethics Is at the Core of Conservation 583
- Summary 584 • Study Questions 585 • Further Readings 586

Chapter 30 Global Climate Change 588

- 30.1 Greenhouse Gases Influence Earth's Energy Balance and Climate 589
- 30.2 Atmospheric Concentration of Carbon Dioxide Is Rising 589
- 30.3 Tracking the Fate of CO₂ Emissions 591
- 30.4 Atmospheric CO₂ Concentrations Affect CO₂ Uptake by Oceans 591
 - **FIELD STUDIES: Erika Zavaleta** 592
- 30.5 Plants Respond to Increased Atmospheric CO₂ 594
- 30.6 Greenhouse Gases Are Changing the Global Climate 596

30.7 Changes in Climate Will Affect Ecosystems at Many Levels 598

■ ECOLOGICAL ISSUES: Who Turned Up the Heat? 602

30.8 Changing Climate Will Shift the Global Distribution of Ecosystems 604

30.9 Global Warming Would Raise Sea Level and Affect Coastal Environments 605

30.10 Climate Change Will Affect Agricultural Production 606

30.11 Climate Change Will Directly and Indirectly Affect Human Health 607

30.12 Understanding Global Change Requires the Study of Ecology at a Global Scale 609

Summary 610 • Study Questions 611 • Further Readings 612
