Contents

Contributors *vii*

1. Recapitulating the liver niche *in vitro* **1**

Kiryu K. Yap and Geraldine M. Mitchell

1. Introduction 2
2. The liver microenvironment 2
3. Cell sources to recreate the liver niche 7
4. Extracellular matrix and scaffolds 10
5. Bio-engineered platforms to recapitulate the liver niche 17
6. *In vitro* applications of bio-engineered liver platforms 29
7. Future directions 33
8. Conclusion 35

Acknowledgments 36
Conflict of interest 36
References 36

2. Organoid systems for recapitulating the intestinal stem cell niche and modeling disease *in vitro* **57**

Hui Yi Grace Lim, Lana Kostic, and Nick Barker

1. Introduction 57
2. Intestinal stem cells and their *in vivo* niche 60
3. Modeling the ECM using synthetic matrices 63
4. Development of "mini-gut" organoid models 67
5. Organoids as a platform for modeling intestinal regeneration, disorders, and cancer 72
6. Conclusions 83

Acknowledgments 84
References 84

3. Reconstructing the lung stem cell niche *in vitro* **97**

Dayanand Swami, Jyotirmoi Aich, Bharti Bisht, and Manash K. Paul

1. Introduction 99
2. Lung development 100
3. Lung stem cell diversity 102
4. Lung regeneration 107

5. Lung stem cell niche 109
6. Recapitulating stem cell niche 116
7. Culture systems and morphogens to study lung stem cell niche 120
8. Artificial scaffold and lung stem/progenitor cell niche 124
9. Conclusion and future direction 131
Acknowledgments 132
Competing interests 132
References 133

4. Engineering mammary tissue microenvironments *in vitro* 145
Julien Clegg, Maria Koch, Akhilandeshwari Ravichandran, Dietmar W. Hutmacher, and Laura J. Bray

1. Anatomy of the normal mammary microenvironment 145
2. Development, progression and clinical management of BC 148
3. 3D tumor modeling 156
4. Current limitations and considerations of 3D models for BC 169
5. Future prospective of 3D BC modeling systems 170
References 172

5. Recapitulating human skeletal muscle in vitro 179
Anna Urciuolo, Maria Easler, and Nicola Elvassore

1. Lessons from skeletal muscle anatomy and physiology 183
2. Lesson from skeletal muscle development 185
3. Lesson from skeletal muscle regeneration 187
4. Emerging approaches for human skeletal muscle in vitro models 191
5. Conclusions and future perspectives 198
Acknowledgments 200
