<b>About the author</b>	<b>ix</b>	<b>5. Virus transmission and epidemiology</b>	<b>59</b>
<b>Preface</b>	<b>xi</b>	Modes of transmission	60
<b>Acknowledgments</b>	<b>xiii</b>	Describing viral infection and disease	67
<b>1. Introduction to animal viruses</b>	<b>1</b>	<b>6. Immunity and resistance to viruses</b>	<b>73</b>
What is a virus?	1	What is immunity?	73
Diversity in the world of viruses	2	Innate immunity	74
Are viruses alive?	4	Pattern recognition receptors	74
Basic steps in the virus replication-cycle	5	Adapter proteins: next level players in innate immunity	78
Propagating viruses	6	Interferons	78
Categorizing viruses (taxonomy)	6	Interferon-stimulated genes and the antiviral state	80
Outcomes of viral infection	9	Intrinsic immunity	82
Introduction to viral pathogenesis	11	Autophagy	83
Introduction to viral transmission	12	Natural killer cell responses to viral infection	83
References	13	Specific immunity	84
		Viruses fight back	85
<b>2. Virus structure</b>	<b>15</b>	<b>7. Viral vaccines</b>	<b>89</b>
Anatomy of a virus	15	Vaccines provide a source of antigen	89
Capsid structure and function	16	Antigen recognition	89
Capsids are built using many copies of one or a few types of protein	17	Classical versus engineered vaccines	90
Simple icosahedral capsids	17	Replicating versus inactivated vaccines	91
Larger icosahedral capsids	19	Viral vaccines that contain infectious agents	91
Viral envelopes	20	Killed, inactivated, and subunit vaccines	93
Other membrane proteins	22	Correlates of protection	94
Matrix proteins	23	Vaccine development and assessment of efficacy	95
Nucleocapsid structure	23	A final word about safety	98
References	23	References	98
<b>3. Virus interactions with the cell</b>	<b>25</b>	<b>8. Antiviral agents</b>	<b>99</b>
Virus attachment	25	Inhibitors of attachment, entry, or uncoating	100
Virus penetration and uncoating	27	Inhibitors of viral nucleic acid synthesis	101
Movement through the cell, interactions with the cytoskeleton	29	Protease inhibitors	103
Localization of viral proteins and nucleic acids in the context of the infected cell	29	Neuraminidase inhibitors	104
The outcome: virus assembly, release, and maturation	35	Interferons	105
		The future of antivirals	105
<b>4. Methods to study viruses</b>	<b>39</b>	<b>9. Virus evolution and genetics</b>	<b>107</b>
Growing viruses	39	Virus evolution	107
Generating cell cultures	39	Measuring virus evolution	109
Isolating viruses	40	Point mutation	109
Resuspending viruses	41	Recombination	110
Counting viruses	46	Reassortment	110
Classical/physical methods of virus quantitation	49	Genotypes and phenotypes	110
Basic principles of diagnostic virology	54	Essential and nonessential genes	110
Next-generation sequencing for virus discovery and characterization	56	Coevolution of virus and host	113
References	58	Genetic manipulation of viruses	113

10. Viral pathogenesis	119	General overview of replication	165
Natural barriers to infection	120	Protein products	166
Primary replication	120	Diseases	167
Movement to secondary replication sites	120	References	173
Genesis of disease	121		
Immunopathogenesis	123	17. Families <i>Togaviridae</i> and <i>Matonaviridae</i>	175
Virulence	124	Family <i>Togaviridae</i>	175
Approaches to study viral pathogenesis	125	Genome structure	177
Virally induced cancers	126	Virion structure	177
		Togavirus replication	177
		Transmission	178
11. Introduction to RNA viruses	129	Togaviruses associated with rash and arthritis	179
Definition and basic properties of RNA viruses	129	Alphaviruses of veterinary importance	181
Positive-strand RNA viruses	130	Family <i>Matonaviridae</i>	181
Negative-sense RNA, ambisense, and double-stranded RNA viruses	131	Reference	183
Hepatitis delta virus uses host DNA-dependent RNA polymerase for replication	134	18. Family <i>Coronaviridae</i>	185
Structural features of RNA virus genomes	134	Coronavirus genome organization	186
Priming viral RNA synthesis	135	Virion structure	188
Mechanisms to generate capped mRNAs	135	Coronavirus structural proteins	189
Mechanisms to generate polyadenylated mRNAs	135	Coronavirus replication cycle	190
Mechanisms to regulate synthesis of genomes and transcripts	136	Diseases caused by coronaviruses	193
RNA viruses and quasispecies	136	Reference	195
References	138		
		19. SARS-CoV-2/COVID-19	197
12. Family <i>Picornaviridae</i>	139	Genome organization	197
Genome organization	139	Virion and structural proteins	198
Virion structure	141	Nonstructural and accessory proteins	199
Picornavirus replication (poliovirus model)	141	Overview of replication	201
Diseases caused by picornaviruses	143	Origins and pathogenesis of SARS-CoV-2	202
		Vaccines	205
		Treatments	205
		Viral variation	206
		Reference	208
13. Family <i>Caliciviridae</i>	149	20. Family <i>Arteriviridae</i>	209
Genome organization	149	Genome organization	209
Virion structure	151	Virion structure	211
General replication cycle	151	Replication cycle	211
Diseases	152	Diseases caused by arteriviruses	211
		References	213
14. Family <i>Hepeviridae</i>	155	21. Family <i>Rhabdoviridae</i>	215
Genome organization	155	Genome organization	217
Virion morphology	155	Virion structure	217
General replication cycle of HEV	156	Overview of replication	217
Disease	157	Diseases	219
References	158		
		22. Family <i>Paramyxoviridae</i>	223
15. Family <i>Astroviridae</i>	159	Genome structure/organization	223
Genome organization	159	Virion structure	223
Virion morphology	159	Overview of replication	224
General replication strategy	161	Genome replication	229
Diseases caused by astroviruses	161	Assembly, release, and maturation	229
		Diseases	229
16. Family <i>Flaviviridae</i>	163		
Genome structure/organization	164		
Virion structure	165		

23. Family <i>Pneumoviridae</i>	233	Overview of replication	286
Genome organization	233	Diseases	289
Virion structure	233		
Overview of replication	234		
Diseases	236		
		31. Family <i>Bimaviridae</i>	293
24. Family <i>Filoviridae</i>	239	Genome structure	294
Genome organization	239	Virion structure	294
Virion structure	241	General replication cycle	294
Overview of replication	241	Disease	295
Disease	243	References	295
25. Family <i>Bornaviridae</i>	247	32. Hepatitis delta virus	297
Genome organization	247	Virion Structure	297
Virion structure	248	Genome organization	297
Overview of replication	248	Hepatitis delta antigens	298
Diseases	250	General replication cycle	299
		Disease	300
26. Family <i>Orthomyxoviridae</i>	253	33. Introduction to DNA viruses	301
Genome structure/organization	255	Taxonomy of DNA viruses	301
Virion structure	255	Viral DNA replication	303
Classification and nomenclature of orthomyxoviruses	256	DNA viruses and cell cycle	304
Influenza virus A proteins	257	Oncogenesis	305
Overview of replication	259		
Antigenic drift and antigenic shift	262	34. Family <i>Parvoviridae</i>	309
Disease	262	Genome organization	309
Antiviral drugs	264	Virion structure	309
Vaccines	264	Overview of replication	311
Reference	264	Diseases	312
27. Family <i>Hantaviridae</i>	265	35. Other small DNA viruses	315
Virion structure	265	Family <i>Circoviridae</i>	315
Genome organization	265	Diseases	316
General replication strategy	267	Family <i>Anelloviridae</i>	317
Disease	267	References	319
References	269		
		36. Family <i>Polyomaviridae</i>	321
28. Order <i>Bunyvirales</i> : Families <i>Peribunyaviridae</i> , <i>Hemaviridae</i> , and <i>Nairoviridae</i>	271	Genome structure	321
Genome organization	271	Virion structure	322
Virion structure	272	Tumor antigens	322
General replication strategy	273	Replication	323
Disease	275	Transformation	324
References	277	Human polyomavirus and disease	324
29. Family <i>Arenaviridae</i>	279	37. Family <i>Papillomaviridae</i>	327
Genome organization	279	Genome structure	327
Virion structure	281	Virion structure	327
Overview of replication	281	Replication cycle	328
Diseases caused by arenaviruses	282	Disease	331
		Animal papillomaviruses	333
		Reference	333
30. Family <i>Reoviridae</i>	283	38. Family <i>Adenoviridae</i>	335
Genome organization	283	Genome organization	335
Virion structure	284	Virion structure	337

Adenovirus replication cycle	337	Overview of the retroviral replication cycle	369
Adenoviruses and human disease	339	The process of reverse transcription	372
Adenoviruses and transformation	339	Integration	373
Oncolytic adenoviruses	339	Transcription of retroviral mRNA	375
Adenoviral vectors	340	Structural proteins	375
		Assembly, release, and maturation	375
		Unique aspects of spumaretrovirus replication	377
39. Family <i>Herpesviridae</i>	343	Mechanisms of retroviral oncogenesis	377
Genome organization	344	References	382
Virus structure	344		
Replication cycle	346	43. Replication and pathogenesis of human	
Latency	347	immunodeficiency virus	383
Diseases caused by human herpesviruses	348	History of HIV and acquired immunodeficiency syndrome	384
Antiherpesviral drugs	351	HIV is a lentivirus	385
References	352	HIV Structural proteins	387
		TAT	390
40. Family <i>Poxviridae</i>	353	REV	390
Genome organization	354	Other HIV-1 proteins	390
Virion structure	354	Summary of HIV replication	395
Replication	354	Overview of HIV pathogenesis	396
Diseases	357	HIV transmission	397
References	359	Disease course	397
		Antiretroviral drugs	398
		Vaccines	399
41. Other large DNA viruses	361		
Family <i>Asfarviridae</i>	361	44. Family <i>Hepadnaviridae</i>	401
Family <i>Iridoviridae</i>	363	Genome organization	401
The giant viruses of acanthameoba	364	Virion structure	403
References	365	Replication cycle	403
		Hepatitis B virus and disease	407
42. Family <i>Retroviridae</i>	367	Index	409
Virion structure	368
