|  |           |
|--|-----------|
| Foreword .....   | xii       |
| Preface .....  | xiv       |
| Symbols and Abbreviations .....                                | xvi       |
| <b>1 History and Context</b> .....                             | <b>1</b>  |
| 1.1 From Cells to Their Nuclei .....                           | 1         |
| 1.1.1 The Cell Theory .....                                    | 2         |
| 1.1.2 Mitosis .....  | 3         |
| 1.1.3 The Chromosome Theory of Heredity .....                  | 6         |
| 1.1.4 Deoxyribonucleic Acid (DNA) .....                        | 9         |
| 1.1.5 Cell Cycles Come in Many Flavors .....                   | 12        |
| <b>2 Cell Growth and Division</b> .....                        | <b>17</b> |
| 2.1 Balanced Growth and Cell Proliferation .....               | 17        |
| 2.2 Measures of Cell Growth .....                              | 21        |
| 2.3 The Relationship Between Cell Growth<br>and Division ..... | 24        |
| 2.4 Patterns of Growth in the Cell Cycle .....                 | 27        |
| 2.4.1 Amoeba Cell Growth .....                                 | 28        |
| 2.4.2 Fission Yeast Growth .....                               | 29        |
| 2.4.3 Budding Yeast Growth .....                               | 30        |
| 2.4.4 Mammalian Cell Growth .....                              | 31        |
| 2.5 Sizers vs. Adders .....                                    | 32        |
| <b>3 Assaying Cell Cycle Progression</b> .....                 | <b>39</b> |
| 3.1 Measuring Cell Cycle Phases .....                          | 39        |
| 3.1.1 Single-Cell Imaging .....                                | 39        |

## viii Contents

|         |   |    |
|---------|---|----|
| 3.1.2   | Labeled Mitoses . . . . .   | 41 |
| 3.1.3   | Frequency Distributions . . . . .   | 43 |
| 3.2     | Growth Limitations and Variations in the<br>Duration of Cell Cycle Phases . . . . . | 46 |
| 3.3     | Synchronous Cultures . . . . .  | 49 |
| 3.3.1   | How can One Induce Synchrony? . . . . .   | 49 |
| 3.3.2   | Selecting for Synchrony . . . . .   | 52 |
| 3.3.2.1 | Elutriation: The Mother of all<br>Synchrony Selections . . . . .                    | 53 |
| 4       | The Master Switch . . . . .   | 57 |
| 4.1     | Genetic Analyses Leading the Way . . . . .  | 59 |
| 4.1.1   | The <i>cdc28</i> Mutant of Budding Yeast . . . . .                                  | 59 |
| 4.1.2   | From the <i>wee1</i> to the <i>cdc2</i> Mutant<br>of Fission Yeast . . . . .        | 63 |
| 4.1.3   | What is True for One is True for All . . . . .                                      | 66 |
| 4.2     | All Roads Lead to the Same Control System . . . . .                                 | 67 |
| 4.2.1   | Cyclins . . . . .   | 67 |
| 4.2.2   | Maturation Promoting Factor (MPF) . . . . .   | 70 |
| 4.3     | Making Sense of it All . . . . .  | 75 |
| 4.3.1   | Cyclins Galore in Budding Yeast . . . . .   | 76 |
| 4.3.1.1 | G1 Cyclins . . . . .  | 77 |
| 4.3.2   | Back to <i>wee1</i> . . . . .   | 78 |
| 5       | Controlling the Master Switch . . . . .   | 80 |
| 5.1     | Cyclins in Cdk Complexes . . . . .  | 81 |
| 5.2     | Cdk as a Target of Phosphorylations . . . . .                                       | 84 |
| 5.2.1   | Activating Phosphorylation . . . . .  | 84 |
| 5.2.2   | Inhibitory Phosphorylation . . . . .  | 85 |
| 5.3     | Other Proteins in Cyclin/Cdk Complexes . . . . .                                    | 86 |
| 5.3.1   | Cdk Inhibitors . . . . .  | 86 |
| 5.3.1.1 | Cip/Kip Proteins . . . . .  | 88 |
| 5.3.1.2 | INK4 Proteins . . . . .   | 88 |
| 5.3.2   | Cks1 . . . . .  | 89 |

|          |   |           |
|----------|---|-----------|
| 5.4      | What Are Its Targets and How Cdk Phosphorylates Them  | 89        |
| 5.4.1    | Defining the Cdk Substrate Universe                   | 89        |
| 5.4.2    | Cyclin the Recruiter                                  | 91        |
| 5.4.3    | Here Comes Cks1                                       | 92        |
| 5.5      | Ordering Cdk Phosphorylation in the Cell Cycle        | 94        |
| 5.5.1    | Order from Intrinsic Cdk Activity                     | 94        |
| 5.5.2    | Precision from Specificity                            | 96        |
| <b>6</b> | <b>A Full Circle of the Switch</b>                    | <b>99</b> |
| 6.1      | Modeling a Cell Cycle Oscillator                      | 99        |
| 6.2      | The M-Cdk Switch                                      | 103       |
| 6.2.1    | Exit from Interphase into Mitosis                     | 103       |
| 6.2.2    | The Anaphase Promoting Complex (APC)                  | 104       |
| 6.2.3    | From Metaphase to Anaphase                            | 105       |
| 6.2.4    | Flipping the M-Cdk Switch Off                         | 106       |
| 6.2.5    | Unsolved Problem: "Sizing" the M-Cdk Switch           | 109       |
| 6.3      | The G1/S Cdk Switch                                   | 110       |
| 6.3.1    | G1-Cdk Activates G1/S Transcription                   | 111       |
| 6.3.1.1  | Doing Away with Transcriptional Inhibitors            | 111       |
| 6.3.2    | Positive Feedback at the G1/S Switch                  | 114       |
| 6.3.3    | Negative Feedback at the G1/S Switch                  | 115       |
| 6.3.4    | Physiological Relevance of G1/S Switch in Cancer      | 116       |
| 6.4      | Transcriptional Waves Until the End of the Cell Cycle | 117       |
| 6.5      | Comments on Overall Gene Expression in the Cell Cycle | 119       |

|          |  |            |
|----------|--|------------|
| <b>7</b> | <b>Duplicating the Genome</b>                              | <b>121</b> |
| 7.1      | DNA Replication  | 121        |
| 7.1.1    | Setting the Stage  | 122        |
| 7.1.2    | Origin Firing  | 126        |
| 7.1.3    | Chromatin  | 128        |
| 7.1.4    | Sisters Stay Together                                      | 129        |
| 7.2      | Checkpoints  | 132        |
| 7.2.1    | The General Concept  | 132        |
| 7.2.2    | DNA Damage Checkpoint                                      | 134        |
| <b>8</b> | <b>Segregating the Chromosomes</b>                         | <b>138</b> |
| 8.1      | Blind Men's Riddle   | 138        |
| 8.2      | The Mitotic Spindle  | 139        |
| 8.2.1    | Tubulin  | 140        |
| 8.2.2    | MTs are Dynamic  | 142        |
| 8.2.3    | Scaling the Spindle  | 146        |
| 8.3      | The MT Organizing Centers (MTOCs)                          | 147        |
| 8.4      | The Kinetochore  | 152        |
| 8.4.1    | Kinetochore-MT Attachment: Stochastic<br>or Deterministic? | 154        |
| 8.4.2    | May the Force Be With You                                  | 156        |
| 8.5      | The Spindle Assembly Checkpoint (SAC)                      | 159        |
| <b>9</b> | <b>Segregating Organelles and the Cytoplasm</b>            | <b>162</b> |
| 9.1      | The Golgi  | 164        |
| 9.2      | Mitochondria   | 166        |
| 9.3      | Lysosomes and Vacuoles                                     | 169        |
| 9.4      | Mitotic Fragmentation of the Nuclear<br>Envelope           | 170        |
