

Contents

Part I The Hardy-Weinberg Law	1
1. The Hardy-Weinberg Law	2
2. Conditions for Hardy-Weinberg Equilibrium	8
3. Applications of the Hardy-Weinberg Law	12
4. Snyder's Ratios	18
Part II Constant Allele Frequencies	23
5. Multiple Alleles	24
6. Separate Sexes	27
7. Sex Linkage	31
8. Other Phenomena Associated with Sex	35
9. Linkage	41
10. Recombination Equilibrium	48
11. Polyploidy	53
Part III Systematic Forces	57
12. Selection	58
13. The General Selection Equation	64
14. Equilibrium Under Selection	69
15. Mutation	74
16. Interaction of Mutation with Selection	79
17. Migration	83
Part IV Dispersive Forces	89
18. The Finite Population Model	90
19. Inbreeding	92
20. The Development of Inbreeding	96
21. Genic Drift	100
22. Genotypic Drift	104
23. Effective Breeding Size	107
24. Interaction of Inbreeding with Systematic Forces	113

25. Coancestry	116
26. Applications of Coancestry	120
27. Tabular Calculation of Coancestry	123
28. Path Calculation of F	128
29. Systematic Inbreeding	131
30. Assortative Mating	137

Part V Quantitative Inheritance	141
---------------------------------	-----

31. Metric Traits	142
32. Evidence for the Theory of Metric Inheritance	148
33. Phenotypic Value	151
34. The Single Locus Model	154
35. Breeding Values	160
36. Dominance Deviations	164
37. Multiple Loci	169
38. Causal Components of Variance	172
39. Analytical Components	176
40. Heritability	183
41. Realized Heritability	187
42. Other Estimates of h^2	192
43. Environmental Variance	197
44. Repeatability	199

Appendix I Exercise Solutions	203
-------------------------------	-----

Appendix II Review Lectures	235
-----------------------------	-----

R1. Basic Genetics	236
R2. Probability	241
R3. Statistical Methods	248
