Introduction. By M. M. GREEN	1
---	---

Lampbrush Chromosomes as Seen in Historical Perspective

By H. G. CALLAN (With 11 Figures)	5
---	---

Polytene Chromosomes

By G. KORGE (With 8 Figures)

1	Introduction	27
2	Structure of Polytene Chromosomes	27
2.1	Disproportionate Replication	27
2.2	Constancy of Banding Patterns	35
3	Gene Organization in Polytene Chromosomes	37
4	Gene Activation-Related Chromosome Puffing	42
5	General Conclusions	50
	References	51

Giant Chromosomes in Ciliates

By D. AMMERMAN (With 8 Figures)

1	Introduction	59
2	Occurrence of Giant Chromosomes	62
3	Chromatin Diminution (Elimination) in Ciliates	63
	References	67

The sp-I Genes in the Balbiani Rings of *Chironomus* Salivary Glands

By C. GROND, H. SAIGA, and J.-E. EDSTRÖM (With 5 Figures)

1	Introduction	69
2	The Structure of the sp-I Genes in the Large BRs	70
2.1	Number of sp-I Genes	70
2.2	Structure of the sp-I Polypeptides	72
2.3	The Inducible BR6	72
2.4	Sequence Organization of the sp-I Genes	73

2.5	Basic Elements of the Subrepeats	75
2.6	Sequence Organization of the 3'-End	76
3	Conclusion and Perspectives	77
	References	78

The *white* Locus of *Drosophila melanogaster*

By B. H. JUDD (With 2 Figures)

1	Introduction	81
2	Genetic and Cytological Position of <i>white</i>	82
3	Molecular Cloning of <i>white</i>	83
4	Phenotypic Expression of the <i>white</i> Locus	84
5	Genetic and Molecular Fine Structure Map	84
6	RNA Transcripts of <i>white</i> Alleles	85
7	Asymmetrical Crossingover at <i>white</i> Locus	87
8	Expression and Regulation of <i>white</i>	89
9	Dosage Compensation	89
10	Expression in Testes and Malpighian Tubules	89
11	<i>zeste-white</i> Interaction	90
	References	92

The Genetic and Molecular Organization of the Dense Cluster of Functionally Related, Vital Genes in the DOPA Decarboxylase Region of the *Drosophila melanogaster* Genome

By T. R. F. WRIGHT (With 2 Figures)

1	Introduction	95
2	Genetic, Cytological, and Molecular Organization of the <i>Ddc</i> Cluster	98
3	The Functional Relatedness of the Genes in the <i>Ddc</i> Region	102
3.1	Catecholamine Metabolism	102
3.2	The Formation, Sclerotization, and Pigmentation of Cuticle	108
3.3	Melanotic Pseudotumors	110
3.4	Female Sterility	110
3.5	Mutations of <i>l(2)37Cf</i> Produce Malignant Brain Tumors	111
4	Sequence Homologies Within the <i>Ddc</i> Region	112
5	The Function of Densely Clustered Genes Individually Transposed to Other Chromosomal Sites	113
	Concluding Remarks	114
	References	117

Heat Shock: Puffs and Response to Environmental Stress

By M. L. PARDUE, W. G. BENDENA, and J. C. GARBE (With 5 Figures)

1	The Heat Shock Response Is a Complex Reaction to Environmental Factors	121
---	--	-----

2	One Major <i>Drosophila</i> Heat Shock Puff Differs from the Others in Several Ways	122
3	The 93D Locus Yields Multiple Transcripts	123
4	93D-Equivalent Loci Have a Rapidly Diverging Sequence but a Conserved Structure	126
5	Conclusions	130
	References	130

The Y Chromosomal Lampbrush Loops of *Drosophila*

By W. HENNIG (With 6 Figures)

1	Introduction	133
2	Structure of the Y Chromosomal Lampbrush Loops	135
2.1	Morphology of the Y Chromosome	135
2.2	Molecular Composition of the Loops	136
3	Function of the Y Chromosomal Lampbrush Loops	139
3.1	Male Fertility Genes and Loops	139
3.2	No Major Structural Sperm Proteins Are Encoded on Loops	139
3.3	A Regulatory Role of the Fertility Genes?	140
3.4	DNA Structure in the Lampbrush Loops	140
3.5	Transcripts of the Lampbrush Loops and Their Potential Functions	142
4	Conclusions	143
	References	144

Contributions of Electron Microscopic Spreading Preparations ("Miller Spreads") to the Analysis of Chromosome Structure

By U. SCHEER (With 9 Figures)

1	Introduction	147
2	The Nuclear Chain: The Elementary Structural Component of Chromosomes	148
3	Visualization of Transcribing rRNA Genes	150
3.1	rRNA Genes in Different States of Activity	155
4	Visualization of Transcriptionally Active Nonnucleolar Genes	155
4.1	Chromatin Structure in Different States of Transcriptional Activity	160
4.2	Ultrastructure of Nascent RNP Transcripts	161
5	Application of Localization Techniques to Miller Spreads	163
5.1	In Situ Hybridization of Nucleic Acids	163
5.2	Biochemical and Immunological Techniques	164
	References	165

Replication of DNA in Eukaryotic Chromosomes

By J. H. TAYLOR (With 4 Figures)

1	Introduction	173
2	Structural Deductions from Chromosomal DNA Replication	174

3	Regulation of DNA Replication in Chromosomes	174
3.1	Viral Origins for Replications	175
3.2	The Nature of Chromosomal Origins for Replication	176
4	The Timing of DNA Replication over the S-Phase	178
5	Possible Factors that Suppress Late Replicating X Chromosome Genes	180
6	Possible Mechanisms of Suppression of Late Replicating DNA	183

8	Transcription Factors for Polymerase II in Mammalian Cells	187
	References	188
	Appendix	191

Gene Amplification in Dipteran Chromosomes

By A. SPRADLING (With 5 Figures)

1	Introduction	199
2.1	Differential Replication of Heterochromatin	200
3	Differential Replication of Euchromatin	201
3.1	DNA Puffs in Sciarids	201
3.2	<i>Drosophila</i> Chorion Gene Amplification	203
3.2.1	Mechanism of Amplification	203
3.2.2	Chromosomal Units of Amplification	206
3.2.3	Sequences Regulating Amplification	206
3.2.4	Model of Amplification Control	208
4	Conclusion	209
	References	210

The Significance of Plant Transposable Elements in Biological Processes

By Zs. SCHWARZ-SOMMER (With 4 Figures)

1	Introduction	213
2	A Brief Introduction into the Structure and Function of Plant Transposable Elements	213
3	How Transposable Elements May be Involved in Development	215
4	Transposable Elements are Mobilized by Genomic Stress	217
5	Plant Transposable Elements as Generators of Sequence Diversity for Molecular Evolution	218
6	Conclusions	219
	References	219

Arrangement of Chromosomes in Interphase Cell Nuclei

By H. SAUMWEBER (With 7 Figures)

1	Introduction	223
2	Polar Chromosome Organization	223

3	Chromosomal Interaction	225
4	A Direct Approach to Interphase Chromosome Arrangement: The Polytene Cell	227
5	Concluding Remarks	232
	References	233

Heterochromatin and the Phenomenon of Chromosome Banding

By D. SCHWEIZER, J. LOIDL, and B. HAMILTON (With 5 Figures)

1	Mammalian G-/R-Bands	235
1.1	DNA Composition in G- and R-Bands	235
1.1.1	DNA Base Pair-Specific Fluorescent Dyes as Labels for dA + dT-Rich G-Bands and dG + dC-Rich R-Bands	235
1.1.2	Fractionation and Characterization of Mammalian G- and R-Band DNA	237
1.2	Mammalian Chromosome Bands and DNA Replication	238
1.2.1	Replication Timing and Transcriptional Activity of G-Bands and R-Bands	239
1.2.2	Constancy and Conservation of Mammalian Chromosome Band Patterns	239
1.3	Evolution of the "Banded" Mammalian Genome	239
2	Heterochromatin and C-Banding	240
2.1	Evolution of C-Band Patterns	240
2.1.1	Regularities in C-Band Distribution Patterns	241
2.1.2	The Role of Chromosome Disposition in the Three-Dimensional Space of the Mitotic Interphase Nucleus	241
2.1.3	A Model for C-Band Patterns	243
2.1.4	The Role of Meiosis in the Evolution of C-Band Patterns	243
2.1.5	<i>Sus scrofa</i> as a Model System for the Study of Centric C-Band Composition	245
2.2	Functional Aspects of C-Heterochromatin	247
2.2.1	C-Heterochromatin Function in Relation to Sequence Composition and Chromosomal Distribution	247
2.2.2	Functions Versus Effects	248
2.2.3	The Control of Cell Volume	249
2.2.4	Meiotic Effects of Heterochromatin	249
