

Contents

1	Introduction	1
2	Techniques of Parasexual Hybridization	5
2.1	Culture Techniques	5
2.1.1	Culture of Isolated Plant Protoplasts	5
2.1.2	Culture of Single Cells and Protoplasts	17
2.2	Isolated Protoplast Stage and Plant Cell Engineering	20
2.2.1	Protoplast Fusion	20
2.2.2	Cell Reconstruction Involving Fusion of Subprotoplasts	27
2.2.3	Cell Modification Through Uptake of Isolated Cell Organelles by Plant Protoplasts	29
2.3	Problems of Genetic Variability	31
2.3.1	Genetic Variability Associated with in Vitro Manipulation of Plant Cells	31
2.3.2	Genetic Changes in Cells Induced During the Stage of Isolated Protoplasts	32
3	Protoplast Fusion and Parasexual Hybridization of Higher Plants	36
3.1	Perspectives	36
3.1.1	Terminology	36
3.1.2	History of Parasexual Hybridization of Higher Plants	37
3.2	Methods of Screening for Parasexual Hybrids	41
3.2.1	Introduction	41
3.2.2	Genetic Complementation	43
3.2.3	Physiological Complementation	46
3.2.4	Restoration of Growth Capacity in Hybrids Upon Fusion of Inactivated Cells	47
3.2.5	Mechanical Isolation	48
3.2.6	Physical Enrichment	50
3.3	Frequency of Formation of Parasexual Hybrids	50
3.4	Protoplast Fusion and the Bypassing of Sexual Barriers	53
3.5	Analysis of the Parasexual Hybridization Process and the Genetic Composition of Plant Forms Arising from Protoplast Fusion	54
3.5.1	General Guidelines	54

3.5.2	Genetic Methods of Analysis	55
3.5.2.1	Hybrid Crosses	55
3.5.2.2	Cloning	56
3.5.2.3	Cytogenetic Studies	57
3.5.2.4	Cytophotometric Measurement of Nuclear DNA Content	57
3.5.3	Biochemical Analysis	58
3.5.3.1	Multiple Molecular Forms of Enzymes	58
3.5.3.2	Analysis of Fraction I Protein	59
3.5.3.3	Restriction Endonuclease Analysis of Chloroplast and Mitochondrial DNA	60
3.5.3.4	Molecular Hybridization of Nucleic Acids	61
3.5.3.5	Analysis of Low Molecular Weight Substances	61
4	Transmission Genetics of Parasexual Hybridization in Closely Related Crosses	63
4.1	General Considerations	63
4.1.1	Perspectives and Philosophy of Analysis of Transmission Genetics	63
4.1.2	Initial Experiments on Transmission Genetics of Parasexual Hybrids	64
4.1.3	Hybridization of More Than Two Parental Cells	70
4.2	Fate of Extranuclear Genetic Determinants	73
4.2.1	Perspectives	73
4.2.2	Protoplast Fusion and the Formation of Cytoplasmic Heterozygotes	75
4.2.3	Mitotic Segregation of Plasmagenes and the Sorting Out of Parental Genotypes	89
4.2.4	Recombination of Plasmagenes	92
4.3	Fate of Nuclear Genes in the Process of Somatic Hybridization	98
4.3.1	Segregation of Nuclei	98
4.3.2	Chromosome Sets of Hybrid Cells	107
4.4	Transmission Genetics in Hybridization Systems Utilizing Parental Cell Inactivation	110
4.4.1	Consideration of Animal and Bacterial Systems	110
4.4.2	Treatment with Iodoacetate	111
4.4.3	Irradiation	112
4.5	Genetic Diversity of Hybrid Plants Obtained by Protoplast Fusion	113
5	Protoplast Fusion and Hybridization of Distantly Related Plant Species	115
5.1	Introduction	115
5.2	Initial Stages of Culture of Hybrid Cells of Distantly Related Plant Species	115

5.3	Interfamily Cell Hybrids of Higher Plants	122
5.4	Intertribal Hybrids of Higher Plants	125
5.4.1	Hybridization of Cruciferae Species	125
5.4.2	Hybridization of Distantly Related Members of the Solanaceae and Other Families	142
5.4.3	General Conclusions of Results Obtained with Intertribal Hybrids of Higher Plants	152
5.5	Intergeneric Hybrids	155
5.6	Influence of Physical and Chemical Factors on the Fate of Genetic Material in Distantly Related Species Combinations	160
5.6.1	Introduction	160
5.6.2	Irradiation and the Induction of Genetic Asymmetry	160
5.6.3	Induction of Mitotic Chromosome Segregation by Chemical Agents	161
6	Use of Somatic Hybridization	163
6.1	Genetic Analysis Using Parasexual Hybridization	163
6.1.1	Introduction and Perspective	163
6.1.2	Analysis of the Nature of Inherited Traits	163
6.1.3	Analysis of Nuclear Genes	164
6.1.3.1	Resistance to 5-Methyltryptophan	165
6.1.3.2	Resistance to S-(2-Aminoethyl)-L-Cysteine	167
6.1.3.3	Resistance to Cycloheximide	167
6.1.3.4	Resistance to Azetidine-2-Carboxylate	167
6.1.3.5	Additional Complementation Studies	167
6.1.4	Cosegregation of Extranuclear Genes	168
6.1.5	Analysis of Mitotic Cycle Mechanisms	174
6.1.6	Analysis of the Mechanisms of Differentiation and Morphogenesis	176
6.2	Practical Use of Somatic Cell Hybridization	179
6.2.1	Introduction	179
6.2.2	Bypassing of Incompatibility in Interspecific Hybridization	179
6.2.3	Reconstruction of Cytoplasmic Genomes	181
6.2.4	Transfer of Cytoplasmic Genomes and Cytoplasmic Male Sterility	183
7	Conclusion	185
	References	189
